Final Environmental Assessment for U.S. Army Corps of Engineers Land Transfer of the Wilmington Harbor North Disposal Area to the State of Delaware

Prepared for:

U.S. Army Corps of Engineers and Diamond State Port Corporation

Prepared by:

Kleinschmidt Associates

June 2023

FINDING OF NO SIGNIFICANT IMPACT

U.S. ARMY CORPS OF ENGINEERS LAND TRANSFER OF THE WILMINGTON HARBOR NORTH DISPOSAL AREA TO STATE OF DELAWARE CITY OF WILMINGTON, NEW CASTLE, DE

The U.S. Army Corps of Engineers, Philadelphia District (Corps) has conducted an environmental analysis in accordance with the National Environmental Policy Act (NEPA) of 1969, as amended. The final Environmental Assessment (EA) dated 6 June 2023, for the Land Transfer of the Wilmington Harbor North Disposal Area to the State of Delaware addresses the impacts associated with the Proposed Action of transferring a confined disposal facility (CDF) from the Corps to the Diamond State Port Corporation (DSPC), on behalf of the State of Delaware. The Property would continue to be used as a CDF under DSPC ownership, and activities consistent with use of the Property as a dredge material disposal site would continue to occur. This Finding of No Significant Impact (FONSI) is the decision document to complete the NEPA process for this Proposed Action.

The Final EA, incorporated herein by reference, evaluated two alternatives: The No Action Alternative and the Proposed Action. The No Action Alternative that would keep the confined disposal facility (CDF) under jurisdiction of the Corps and subject to the Corps standard disposal process, including a Declaration of Excess. The selected Alternative is the Proposed Action and includes:

- Conveyance of the Property from the Corps to the Diamond State Port Corporation (DSPC)

For both the No Action Alternative and the Proposed Action, the potential effects were evaluated, as appropriate. A summary assessment of the potential effects of the Proposed Action are listed in Table 1:

Table 1: Summary of Potential Effects of the Proposed Action

	Insignificant effects	Insignificant effects as a result of mitigation*	Resource unaffected by action
Aesthetics	☐	☐	☒
Air quality	☐	☐	☒

Water quality	☐	☐	☒
Climate change	☒	☐	☐

All practicable and appropriate means to avoid or minimize adverse environmental effects were analyzed and incorporated into the Proposed Action. Best management practices (BMPs) as detailed in the EA will be implemented, if appropriate, to minimize impacts.[1] The Property would continue to be used as a CDF under DSPC ownership.

No compensatory mitigation is required as part of the Proposed Action.

Public review of the draft EA and FONSI was completed on 21 April 2023. All comments submitted during the public review period were responded to in the Final EA and FONSI. A 30-day state and agency review of the Final EA was completed on 21 April 2023. Comments from state and federal agency review did not result in any changes to the Final EA.

Pursuant to section 7 of the Endangered Species Act of 1973, as amended, the U.S. Army Corps of Engineers determined that the Proposed Action would have no effect on federally listed species or critical habitat. Both National Marine Fisheries Service (NMFS) and U.S. Fish and Wildlife Service (USFWS) concurred with this determination.

Pursuant to Section 106 of the National Historic Preservation Act of 1966, as amended, the Delaware Division of Historical and Cultural Affairs provided a letter May 10, 2023, indicating "No Adverse Effect to historic properties by the proposed undertaking.'

Pursuant to the Clean Water Act of 1972, as amended, a Section 404 Permit is not required for the Proposed Action (land transfer), as there will be no discharge of dredged or fill material into water of the United States. On August 4, 2022, DSPC was issued a Department of the Army Individual Permit for the Port of Wilmington, Edgemoor Expansion Project, which includes continued use of the WHN site as a CDF.

Pursuant to the Clean Water Act of 1972, as amended, a Section 401 Water Quality Certification from Delaware Department of Natural Resources and Environmental Control (DNREC) for the Proposed Action (land transfer) is not required as there will be no discharge into waters of the United States.

Pursuant to the Coastal Zone Management Act (CZMA) of 1972, as amended, USACE determined that the proposed land transfer will not have any reasonably foreseeable effects on Delaware's coastal uses or resources and is consistent with the enforceable policies of the Delaware Coastal Management Program. In a letter dated May 11, 2023, DNREC concurred that the project would result in no coastal effects.

[1] 40 CFR 1505.2(a)(3) all practicable means to avoid and minimize environmental harm are adopted.

All applicable environmental laws have been considered and coordination with appropriate agencies and officials has been completed.

All applicable laws, executive orders, regulations, and local government plans were considered in evaluation of alternatives.[2] Based on these findings, the reviews by other Federal, State and local agencies, Tribes, input of the public, and the review by my staff, it is my determination that the Proposed Action would not cause significant adverse effects on the quality of the human environment; therefore, preparation of an Environmental Impact Statement is not required.[3]

[2] 40 CFR 1505.2(a)(2) requires identification of relevant factors including any essential to national policy which were balanced in the agency decision.

[3] 40 CFR 1508.1(l) states the FONSI is a document by a Federal agency briefly presenting the reasons why an action, not otherwise categorically excluded (§ 15018.4), will not have a significant effect on the human environment and for which an environmental impact statement therefore will not be prepared.

WRDA	Water Resources Development Act

1.0 PURPOSE OF AND NEED FOR ACTION

1.1 Background

The U.S. Army Corps of Engineers (USACE) currently owns the Wilmington Harbor North (WHN) Confined Disposal Facility (CDF) (hereinafter referred to as the WHN CDF). This property has been identified as excess to the Government's needs, and Section 356(d) of the Water Resources Development Act (WRDA) of 2020 stipulates conveyance of the Wilmington Harbor North Disposal Area from the Federal Government to the State of Delaware. The Diamond State Port Corporation (DSPC), a corporation of the State of Delaware, would assume ownership and operation of the Property. This Environmental Assessment (EA) evaluates the potential environmental, socioeconomic, historic, and cultural impacts that would result from the proposed conveyance of the Property from the USACE to the DSPC.

The USACE currently owns and maintains the Property, located in the City of Wilmington, New Castle County, Delaware (Figure 1.1-1). The WHN CDF is located along the Christina River and Delaware River and has provided storage for past dredged materials from the Christina River and Delaware River since 1914. CDFs are utilized as the least cost alternative to retain dredged materials to meet the USACE Navigation mission by maintaining channels and ports at their Congressionally authorized project depths. Dikes were used to isolate the dredged material and a weir or sluice structure allows the discharge of water (reduced in total suspended solids) from the CDF back into the river. USACE has not added dredge material to the WHN CDF since December 2017.

The Port of Wilmington is a full-service, deep-water port and marine terminal located at the confluence of the Christina and Delaware Rivers. The Port is owned by DSPC, and operated by GT USA Wilmington, LLC. Continued dredging of the Christina and Delaware Rivers is crucial to maintain authorized channel depths for access and navigational safety at the Port. Currently, the Port of Wilmington is planned to be expanded.

In compliance with the National Environmental Policy Act of 1969 (NEPA) and Council on Environmental Quality (CEQ) regulations, Kleinschmidt Associates, on behalf of DSPC prepared this EA to evaluate the potential impacts of the proposed land conveyance, to include WHN's continued future use as a CDF under DSPC's ownership. As part of this process, a Phase I Environmental Site Assessment (ESA) Report was conducted in 2022 by

Environmental Standards, Inc. (Environmental Standards 2022; Appendix A). The data provided in the ESA report helped inform this EA.

Figure 1.1-1 Boundary of the Property

1.2 Property Description

The Property proposed for conveyance from the USACE to the DSPC is approximately 172 acres. The USACE historically used the Property for disposal of dredged material. The WHN CDF is located within a commercial and industrial use area with adjacent properties including the Cherry Island Landfill, the Port of Wilmington, industrial/commercial properties, the Delaware River with residential properties on the eastern bank, and the Christina River. The USACE last utilized the Property for dredged material disposal in December 2017. The area is currently densely vegetated, with a gravel/dirt access road circling the disposal area. The western side of this access road is overtaken by vegetation and impassable. There are no buildings present on the Property. There is a sluice at the southern edge of the containment berm that provides drainage during dredge material dewatering. The WHN CDF has a large depression in the center, which can pond water following precipitation events. The Cherry Island Landfill is immediately northeast of the WHN CDF. Groundwater monitoring wells and piezometers associated with the Cherry Island Landfill are in the southeast portion of the Property. No stressed vegetation, surface water contamination, leachate, or seeps were observed during the Phase I ESA (Appendix A). No remedial activities are currently taking place at the property.

History of the Property

Historical documents, including aerial photos and/or topographic maps, provide insight into development at the Property over the years (Appendix A). They indicate that in 1904 the Property was still an undeveloped marsh with a few roads bordering the Property and the Bellevue Range Rear Light Station located adjacently to the property in the Christina River. The surrounding area was moderately developed, including a large residential area northwest of the Property and commercial areas to the south. In 1919, the land at the Property was drier and firm with less marshy areas, and the southeastern portion of the Property extended into the Delaware River. In the 1940's, the eastern portion of the Property extended further into the Delaware River and two buildings were erected on southern boundary of the Property along the Christina River. In the 1950's, dikes were added to the Property and large amounts of soils were imported, which converted the marsh to fairly dry and firm land along the eastern boundary. In 1967, vegetation was no longer present in the southeastern portion of the Property. In 1970, large amounts of soil were imported, which converted the northern and eastern boundaries into solid ground, and soil was also added to the main section of the Property. Between 1982 and 1997, two distinct cells in the west and the east were created and multiple levees were built along

the borders of each cell. Only the western cell is part of the Property. Between 1995 and 2019, there were fluctuating elevation changes and vegetation cover varied over the years.

1.3 Purpose and Need of Project

The Wilmington Harbor North CDF was utilized by USACE for over 100 years. The site has reached its capacity to service USACE for the volumes of dredge material that USACE used the site for without major upgrades to the site. Because USACE has other options for dredge material disposal, continued use / upgrading WHN CDF is not economically feasible for USACE. The Property was identified as excess property and was slated for conveyance to the State of Delaware in WRDA 2020, Section 356(d).

DSPC, who owns the Port of Wilmington, would take ownership as the entity for the State of Delaware and would continue to use the property as a dredge material disposal site (the site can accommodate DSPC dredging events without major upgrades). The CDF would be used by DSPC for disposal of material from maintenance dredging of the berthing area, as well as for overflow for initial construction of the Edgemoor Expansion project.

1.4 Scope of EA

This EA analyzes the impacts from the No Action Alternative and the Proposed Action on environmental, socioeconomic, historic, and cultural resources. The descriptions of the physical, chemical, and biological conditions of the Property and adjacent areas are based on data collected in prior studies, the Phase I ESA (Appendix A), and data collected from state and federal agencies.

This EA has been prepared in accordance with the NEPA, as well as 33 CFR Part 230 (USACE NEPA Regulations). The USACE is the Lead Federal Agency for this NEPA review.

2.0 PROPOSED ACTION AND ALTERNATIVES

2.1 No Action Alternative

Under the No Action Alternative, the Property would not be transferred to DSPC. The land would be subject to the USACE standard disposal process, including a Declaration of Excess. Once the Subject lands are declared excess, they would be transferred to the U.S. General Services Administration (GSA) for the completion of the standard disposal process. GSA would determine the appropriate path forward for transfer of the Property and would complete separate NEPA documentation for this action.

2.2 Description of Proposed Action

The USACE has the authority under Section 356(d) of the WRDA of 2020 to convey this federally-owned Property to the State of Delaware. The Proposed Action includes the conveyance of the Property (approximately 172 acres) from the USACE to the DSPC (as an Agent of the State of Delaware). The Property would continue to be used as a CDF under DSPC ownership, and activities consistent with use of the Property as a dredge material disposal site would continue to occur. DSPC anticipates utilizing the Property for Edgemoor maintenance dredging events, and as a contingency site for dredged material from initial construction. DSPC use of the site as a CDF is anticipated to be at less quantities of dredged material disposal per event (average 300,000 cubic yards per maintenance dredging event) than USACE previously placed on the site per event (1.5 million – 2 million cubic yards for one dredge event). The site would continue to be managed to promote dewatering and settling of the existing material.

2.3 Summary Comparison of Impacts by Alternative

Table 2.3-1 summarizes and compares the impacts from Chapter 4 by environmental resource and alternative. Where an impact is not specifically identified as adverse or beneficial, the reader should assume the impact is adverse.

Table 2.3-1 Impacts of the No Action Alternative and Proposed Action by Resource

Resource	No Action	Proposed Action
Socioeconomics (including Environmental Justice)	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF. Proposed Action would not have adverse socioeconomic or environmental impacts on minority and low-income populations in Wilmington, DE.
Land Use	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF.
Geology and Soils	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF, but DSPC use would be less quantity of material per dredge event than previous use by USACE.
Hydrology	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF. The site would continue to be managed to promote dewatering and settling of the existing material on site.
Wetlands	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF. DSPC has received Section 404 Permit for continued use of site as a CDF.
Water Quality	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF. Based on the Phase I Environmental Site Assessment, there was no evidence of leachate, seeps, or surface water contamination at the Property. Continued operations of the CDF would not input any new contaminants into the Delaware River.
Aquatic Resources	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF. Settlement basins and decanting water reduces contaminant levels and turbidity in the effluent before it is released back into the river. Dredging, and associated dredged material placement operations are typically conducted outside the anadromous fish migration period.

Resource	No Action	Proposed Action
Terrestrial Resources	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts to terrestrial resources are anticipated; site would continue to be used as a CDF.
Protected Species	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF. No known protected species have been identified on the Property.
Cultural Resources	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF. Ingress and egress to the Bellevue Light Station would be maintained under DSPC ownership.
Air Quality	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	No new or additional adverse impacts; site would continue to be used as a CDF. Operation of the CDF by USACE did not result in exceedance of air quality standards, nor should continued use of the CDF by DSPC.
Hazardous, Toxic, and Radioactive Waste	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	The site would continue to be used as a CDF; the composition of the dredge material being disposed would not change; therefore, no new or additional adverse impacts would occur.
Climate Change	Property would transfer to GSA; future uses and potential impacts would be discussed under separate NEPA documentation.	Greenhouse gas emissions would continue to occur from dredging and/or site improvement equipment (when used), but the very limited frequency of use would not result in significant, adverse impacts to climate change from continued use of the site as a CDF.

3.0 AFFECTED ENVIRONMENT

3.1 Socioeconomics

The Property is located in the City of Wilmington along the Christina River and Delaware River in New Castle County, Delaware. According to the United States Census Bureau (USCB) from 2020 data, New Castle County is the most populous county in Delaware with 558,306 people, which is nearly 60% of the state population (967,679 people) (USCB 2022b). The entire county is 426 square miles and has approximately 1,310 persons per mile (Table 3.1-1) (USCB 2022b). New Castle County is largely metropolitan with approximately 37 percent of land developed, 21 percent forested, and 22 percent agricultural (Table 3.1-2) (MRLC 2019). Open space in New Castle County includes wildlife refuges; wildlife management areas; and state, county, and local parks. This includes the First State National Historic Park, located about 5 miles south of the Project. Approximately 19 percent of the 311,434 acres in the county are open space (New Castle County GIS Services 2022).

Table 3.1-1 Socioeconomic Data for New Castle County and Wilmington, Delaware

	New Castle County	Wilmington
Population	558,306	70,655
Area (sq miles)	426	11
Population density	1,310	6,485

Woody Wetlands	26,625.35	8.5%
Total	**311,433.62**	**100%**

Source: MRLC 2019

The median age in New Castle County is 38.7, with 92.7 percent of the adult population having a high school degree or higher, and 36.7 percent holding a bachelor's degree or higher (Table 3.1-1). Out of the 92 percent of high school graduates in New Castle County, 25 percent have some college education, 21 percent hold a bachelor's degree, and 16 percent have a post-graduate education. Approximately 8 percent of the county's adult population do not have a degree (USCB 2020b).

Within New Castle County, the City of Wilmington is the most populous city in the State of Delaware with a population of 70,898 people (USCB 2020d). There are approximately 6,485 people per square mile within the 11 square mile city (Table 3.1-1) (USCB 2022a). The median age is 35.9. Approximately 88 percent of the Wilmington population is educated with a high school degree or higher (USCB 2020a). This is just slightly below the rate in Delaware which is 90.6 percent and the national rate (88.5 percent) (USCB 2020c). Out of the 88 percent, 38 percent have a high school degree, 22 percent have some college, 17 percent have a bachelor's degree, and 12 percent post-graduate degrees. Approximately 12 percent of the population have no educational degrees (USCB 2020a).

There are 209,461 households within New Castle County, of which 29,708 households are located in the City of Wilmington (Table 3.1-1). New Castle County contains 224,242 housing units, of which 68 percent are owner occupied (USCB 2020b). There are 33,849 housing units within the City of Wilmington, with 88 percent of them occupied in 2020, 56 percent of these units were renter-occupied with the other 44 percent owner occupied (USCB 2020a). The median value of owner-occupied housing units in Wilmington is $173,500 (USCB 2022a). This is $93,000 less than the County's median housing unit value of $266,500 (USCB 2022b).

The median household income in New Castle County is $75,275 per year with a per capita income of $38,965 per year (USCB 2020b). Approximately 10 percent of households have an annual income of $200,000 or more and 33 percent of households have an income less than $50,000 a year (USCB 2020b). About 10.8 percent of the population within New Castle County live below the poverty line. This is less than the 11.4 percent poverty rate within the state of Delaware (USCB 2020c).

In the City of Wilmington, the median household income is $45,139 per year, and median income per capita is $31,170 (USCB 2020a). Approximately 5 percent of the population has an annual income of $200,000, while 54 percent of the population has an annual income of less than $50,000. About 24.9 percent of the population in Wilmington is living below the poverty line (USCB 2020a). This is more than double the rate in the state of Delaware, which is 11.4 percent of people below poverty line (USCB 2020c).

In New Castle County, the major employment sectors are Health Care and Social Assistance (15.1 percent), Retail Trade (10.8 percent), and Finance and Insurance (10.5 percent) (Table 3.1-3) (USCB 2020d). The industries that pay the highest median income in New Castle County are Computer & Mathematical Occupations ($85,266); Computer, Engineering, and Science Occupations ($80,955); and Architecture and Engineering Occupations ($80,544) (DataUSA 2019b).

Out of the 32,101 individuals employed in the City of Wilmington, the Health Care and Social Assistance industry employs the most individuals, representing 18.1 percent of all employment (Table 3.1-3) (DataUSA 2019a). The Finance and Insurance industry (9.9 percent) and the Retail Trade industry (9.7 percent) are the other top two industries in the City of Wilmington (DataUSA 2019a). The industries that pay the highest median income in Wilmington are Utilities ($90,500), Management of Companies and Enterprises ($88,031), and Professional and Scientific Services ($72,519) (DataUSA 2019a).

Table 3.1-3 Labor Statistics from 2016 to 2019 for New Castle County and the City of Wilmington

Industry Type	New Castle County		City of Wilmington	
	Total	Percent of Workforce	Total	Percent of Workforce

The Delaware River Basin provides nearly $25 billion annually in economic activities. Studies from the University of Delaware predict the Delaware River Basin supports $10 billion in annual wages for industries such as recreation, hunting and fishing and $21 billion annually in ecosystem goods and services such as improving water quality, and water supply (DRBC 2020). The Delaware River and Bay supports many of the industries within the county and city. The Delaware River supports shipping industries for military supplies and equipment, oil and gas, steel, paper, meat and produce, and the Port of Wilmington contains the largest U.S. banana importer, handling over one million tons of produce from Central America annually. (DRBC 2020).

3.1.1 Environmental Justice

Executive Order 12898 (Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations) requires that Federal agencies identify and address whether a proposed project's programs, policies, or activities would have any disproportionately high and adverse human health or environmental effects on minority populations, low-income populations, or Native American Tribes. According to the Executive Order provisions, a minority is defined as individuals who are members of specific population groups which includes American Indian or Alaskan Native; Asian or Pacific Islander; Black, not of Hispanic origin; or Hispanic. Minority populations are identified if minority groups comprise over 50 percent of the affected area or represent a meaningfully larger percentage of the affected area than that of the general population. Low-income populations are identified in an affected area by the statistical poverty thresholds (CEQ 1997).

Data from the USCB was evaluated to illustrate the population demographics and socioeconomics of New Castle County and the City of Wilmington, Delaware. The EPA's EJScreen, an environmental justice (EJ) screening and mapping tool, was used to identify minority and low-income populations within the vicinity of the Property and identify environmental hazards that impact these communities.

According to the 2020 U.S. Census, the population of New Castle County increased by 5.99 percent from 2010 to 2020, gaining approximately 32,240 individuals (USCB 2020e). Of the 558,306 people in New Castle County, 55.1 percent identified as White, and 25.7 percent as Black. Other racial groups include Native American (0.4 percent), Asian (6.2 percent), a mix of two races (7.7 percent), or other (5.0 percent) (USCB 2020e).

The population of City of Wilmington decreased by 0.07 percent, approximately 47 individuals, from 2010 to 2020 (USCB 2020d). According to the 2020 U.S. Census, 56.2 percent of the 70,898 people within the City of Wilmington identified as Black and 28.7 percent identified as White (Table 3.1-4). Other racial groups include Native American (0.4 percent), Asian (1.3 percent), a mix of two races (7.2 percent), or other (6.2 percent) (USCB 2020d). Approximately 11 percent of the Wilmington population identified as Hispanic (USCB 2020a).

The majority (88 percent) of homes within the City of Wilmington are English-only speaking. This is compared to 84 percent English-Only speaking homes in New Castle County and 79 percent of homes in the United States. In Wilmington, 7.7 percent of the population were born in a foreign county, with the majority of these people from Latin America (63 percent), followed by Asia (16 percent), and Europe (11 percent) (USCB 2020a). The median household income in Wilmington is $45,139 per year and about 24.9 percent of the population is living below the poverty line (USCB 2020a).

Table 3.1-4 Population and Race Statistics from 2010 to 2020

Race	New Castle County				Wilmington			
	2010	2020	% of Population (2020)	% Change in Population	2010	2020	% of Population (2020)	% Change in Population
White alone	352,955	314,231	55.1%	-11.0%	23,079	20,334	28.7%	-11.9%
Black or African American alone	127,786	146,544	25.7%	14.7%	41,127	39,854	56.2%	-3.1%

EJScreen combines demographic and environmental information for a geographical area to calculate 12 Environmental Justice (EJ) Indexes. Census block groups are used to compile these data for a selected buffer around the Property (EPA 2022). Here, a 5-mile buffer was used to encompass the City of Wilmington and represent communities adjacent to the Project. Each EJ Index is calculated separately by combining the demographic indicators (people of color and low-income communities) with each of the environmental factors (e.g., particulate matter). EJ Indexes are higher in areas with larger number of low-income and/or minority residents (EPA 2022). The EJ Indexes are reported in percentiles that the selected area represents when compared to a larger group (i.e., region, state, and nation) (EPA 2022). For example, if the selected area is at the 60th percentile of the nation, the average person within the selected area represents greater than or equal to 60 percent of the nation's population.

According to the EJScreen report, 53 percent of the community within a 5-mile radius of the Project identify as people of color and 35 percent of the community are considered low income (Table 3.1-5). The Demographic index for this area is at the 75th percentile of the state, and 68th percentile of the nation, suggesting a greater than average proportion of this community is considered susceptible (Table 3.1-6). EJ Indexes for vicinity of the Property ranged from the 71st to 96th percentile of the state and 66th to 95th percentile of the nation (Table 3.1-6). The highest indexes were wastewater discharge, proximity to hazardous waste, proximity to traffic, and proximity to a superfund site. The EPA identified two National Priorities List (NPL) superfund sites and 23 hazardous waste treatment, storage, and disposal facilities within the 5-mile radius of the Project. These environmental factors, as well as others listed in Table 3.1-6, compound to add further stress on a vulnerable community. Table 3.1-5 reports the raw values of environmental and demographic factors and their percentile in the state and nation. Table 3.1-6 reports the percentiles of the EJ indexes for the community within the Property vicinity as compared to the state and national EJ Indexes.

Table 3.1-5 Raw Values of Environmental and Demographic Factors Within a 5-Mile Radius of the Property and How They Compare to State and National Averages

Environmental Factors	Local Value	State Average	Percentile in State	National Average	Percentile in Nation
Particulate Matter 2.5 (µg/m^3)	8.68	7.79	85	8.74	52
Ozone (ppb)	42.8	42.8	37	42.6	55
2017 Diesel Particulate Matter (µg/m^3)	0.37	0.246	86	0.295	70-80th
2017 Air Toxics Cancer Risk (risk per lifetime per million people)	35	26	96	29	90-95th
2017 Air Toxics Respiratory Hazard Index (HI)	0.37	0.29	95	0.36	70-80th
Traffic Proximity (daily traffic count/distance to road)	1200	570	85	710	85
Lead Paint (% pre-1960s housing)	0.62	0.23	87	0.28	84
Superfund Proximity (site count/km distance)	0.41	0.31	76	0.13	93
RMP Facility Proximity (facility count/km distance)	0.95	0.55	79	0.75	75
Hazardous Waste Proximity (facility count/km distance)	4.2	1.7	87	2.2	85
Underground Storage Tanks	4.3	1.9	86	3.9	75
Wastewater Discharge (toxicity-weighted concentration/m distance)	7.5	1.4	96	12	97
Demographic Factors	**Local Value**	**State Average**	**Percentile in State**	**National Average**	**Percentile in Nation**
Demographic Index	44%	32%	75	36%	68
People of Color	53%	38%	74	40%	67
Low Income	35%	26%	74	31%	62
Unemployment Rate	7%	5%	73	5%	73
Linguistically Isolated	3%	2%	69	5%	60
Less Than High School Education	12%	10%	67	12%	62
Under-Age 5	6%	6%	64	6%	59
Over Age 64	15%	18%	44	16%	54

3.2 Land Use

The Property is located on the Christina River in New Castle County, DE in Wilmington, near the confluence of the Christina River and the Delaware River, and is zoned as Heavy Industrial (New Castle County 2022). Adjacent to the Property are the Cherry Island Landfill to the north and northeast, the Delaware River to the east, the Christina River (with commercial and industrial properties including the Port of Wilmington) on the southern shore, and I-495 to the west (Appendix A). An electrical service manhole and a pole-mounted transformer are located at the southern portion of the Property, and stormwater management features such as berms, drains, and outfall structures are located on the Property (Appendix A).

The Property was previously comprised of undeveloped marshlands until 1914, when it was developed and used for disposal of dredge material. The Property is still designated as a CDF but has not been actively used for dredge material disposal in the recent past (Appendix A). See Figure 3.2-1 for Land Cover Classifications.

3.2.1 Coastal Zone Management Act (CZMA)

The Property is located within Delaware's coastal zone and is therefore under the purview of the Delaware Coastal Management Program (DCMP), which requires entities to submit a Federal Consistency Form for federal actions that may affect coastal use or resources in

Delaware to the State for review. There are wetlands located on the Property, (see Wetland Section 3.5) but no public lands, beaches, or agricultural areas (Appendix A).

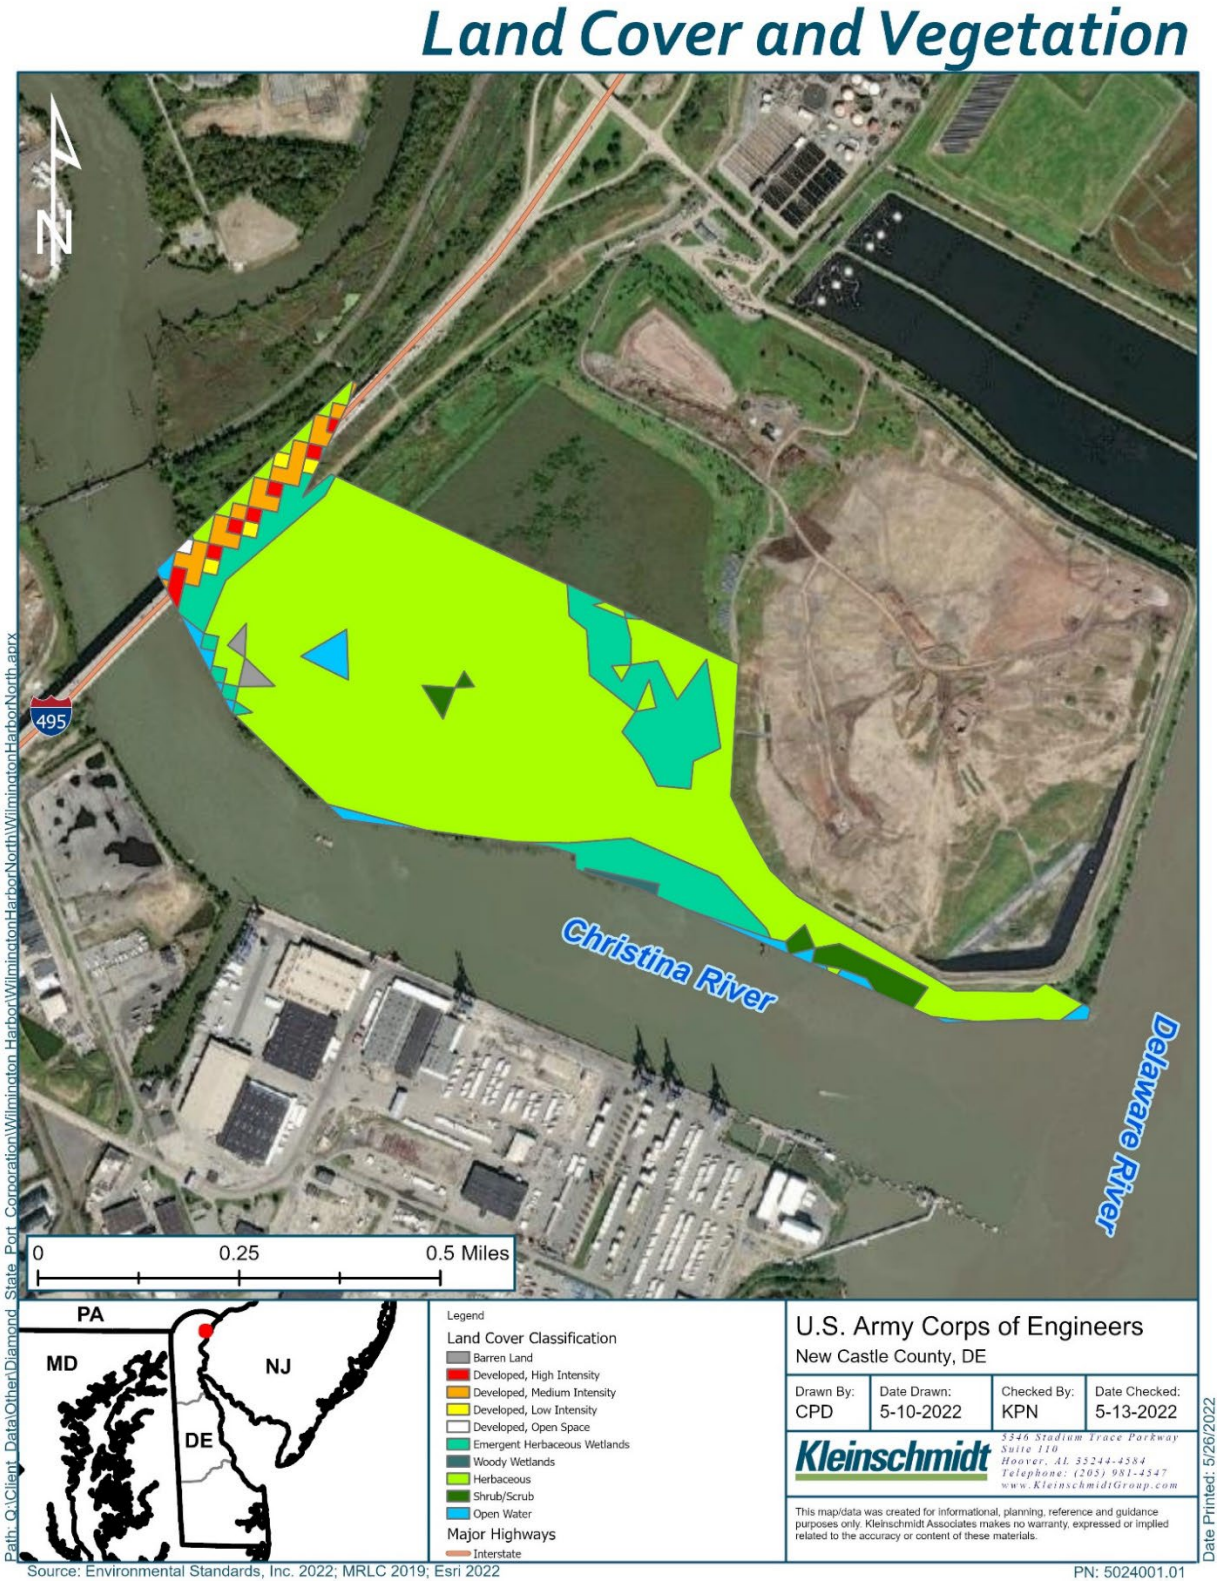

Figure 3.2-1 Land Cover Classifications within the Property Boundary

3.3 Geology and Soils

The Property is located in the Eastern Broadleaf Forest (Oceanic) Province. This level III ecoregion is characterized by a diverse topography and altitudes ranging from 1,000 to 3,000 feet above mean sea level (msl). The main soil formation process in this ecoregion is podzolization (USFS 2022), which involves the leaching of upper layers of soil with accumulation of material in the deeper layers, resulting in the creation of characteristic horizons. Soils are typically Alifsols, but Ultsiols are present in the lower latitudes (USFS 2022).

The bedrock underneath the Property is classified as part of the Windy Hill Gneiss Formation, which is characterized by thin, interlayered, fine- to medium-grained hornblende-plagioclase amphibolite, biotite gneiss, and felsic gneiss, likely metavolcanic (Delaware Geological Survey 2000). Soils within the Property are primarily Udorthents, but a small amount of Othello silt loams are also present (Figure 3.3-1). Table 3.1-1 describes the soil variety within the Property (NRCS 2022). Environmental Standards found no stained soils, leachate, or seeps on the Property during the March 16, 2022, site visit (Appendix A).

Table 3.3-1 Soils of the Wilmington Harbor North Disposal Area

Soil Type	Symbol	Area[1] (acres)	Percentage	Soil Description
Othello silt loams, 0 to 2 percent slopes, northern coastal plain	OtA	0.4	0.2	Silt loam, sandy loam, and loamy sand derived from silty eolian deposits over fluviomarine deposits typically found on flats, depressions, and swales
Udorthents, wet substratum, 0 to 2 percent slopes	UwA	10.1	6.1	Loams and sandy loams derived from fluviomarine sediments typically found on flats and knolls
Udorthents, 10 to 30 percent slopes	UzF	48.4	29.2	Sandy loams derived from fluviomarine sediments typically found on knolls and hillslopes
Udorthents, refuse substratum, 0 to 2 percent slopes	UsB	107.1	64.5	Sandy loams and clay loams derived from refuse and rubble over mine spoil or earthly fill

NRCS 2022

[1] Acreages add to 166.0 ac (vs 172 ac) because 6 acres are designated as Water

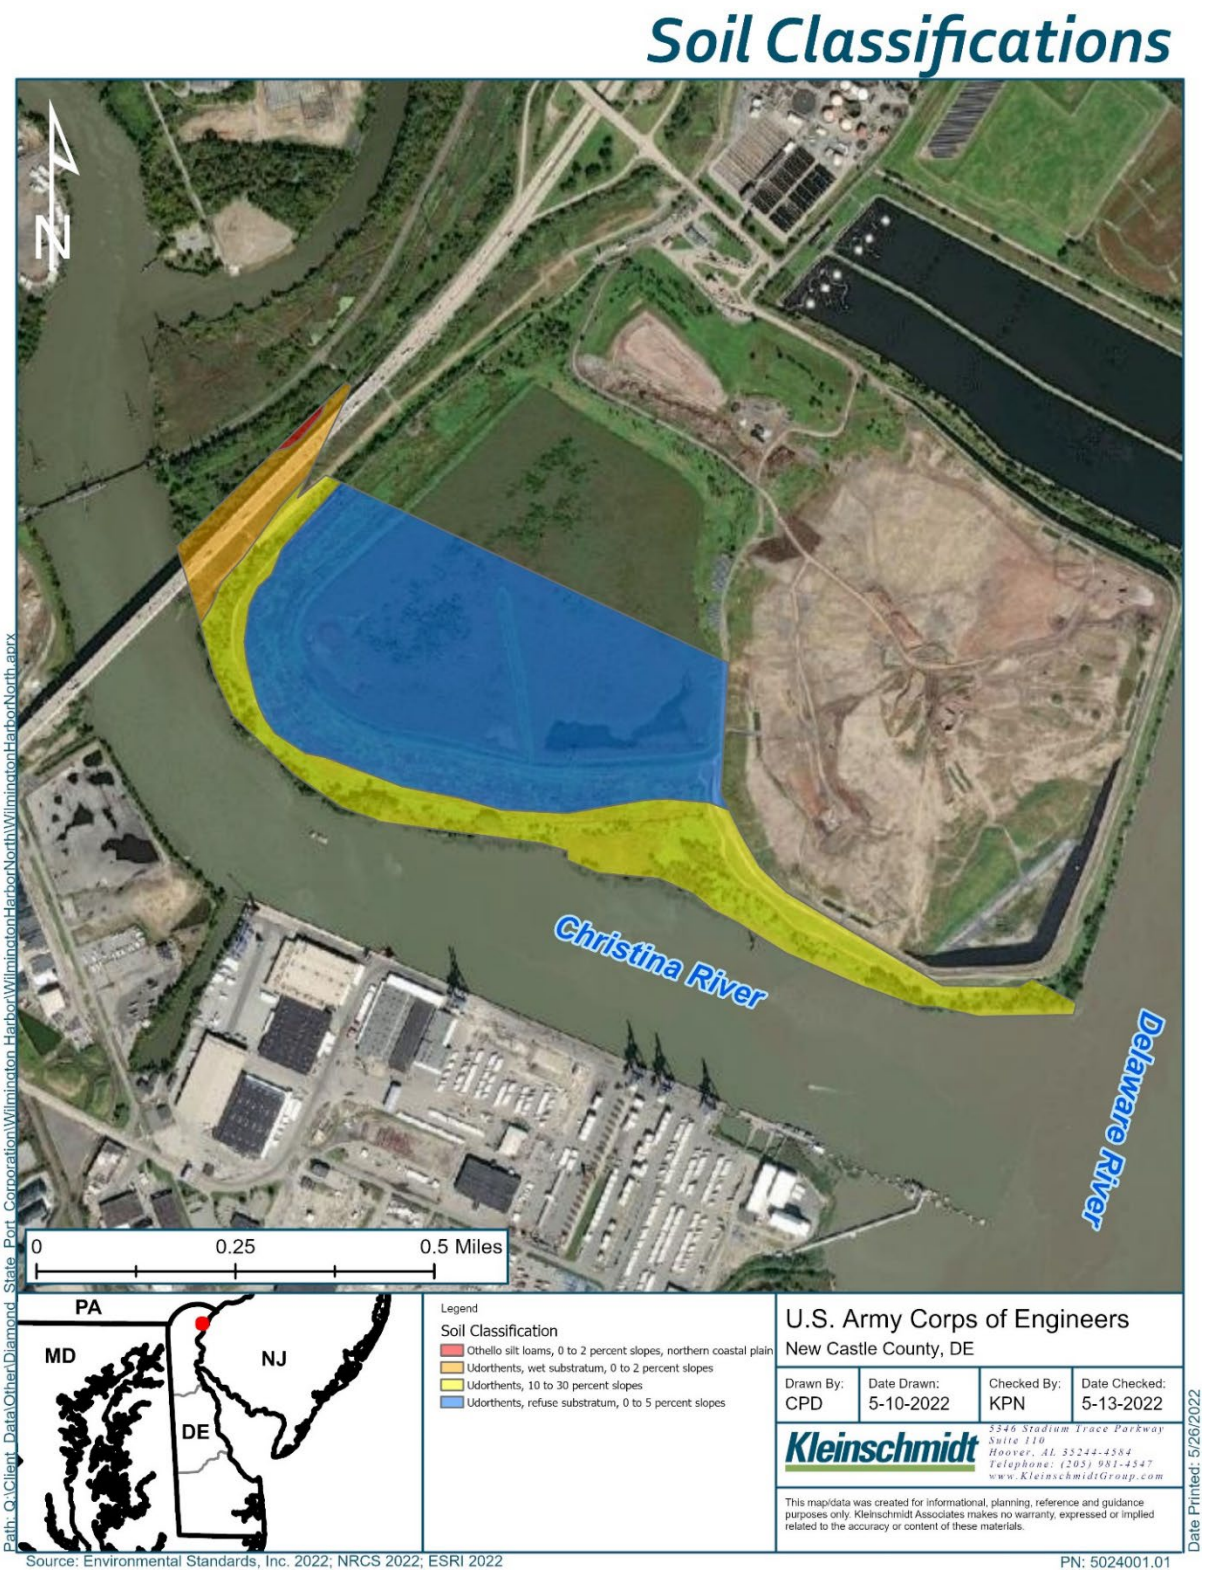

Figure 3.3-1 Soil Classifications within the Property Boundary

3.4 Hydrology

3.4.1 Delaware Estuary

The Delaware Estuary is a watershed that encompasses the mouth of the Delaware Bay between Cape May, NJ and Cape Henlopen, DE upstream through Wilmington, Camden, and Philadelphia to the falls of the Delaware River in Trenton, NJ (Santoro 2004). Hydrodynamics of the estuary are mainly influenced by inflow of freshwater, circulating ocean currents, and wind. The Delaware River at Trenton contributes most of the freshwater inflow, followed by the Schuylkill River, tributaries, and overland (Santoro 2004).

3.4.2 Floodplains

Based on the ESA, the Property also has a Special Flood Hazard Area located along the Southern border. Special Flood Hazard Areas are identified by the United States Federal Emergency Management Agency (FEMA) as an area with special flood or mudflow, and/or flood related erosion hazard (Code of Federal Regulations (CFR) 44).

3.4.3 Groundwater

Environmental Standards visited the Property on March 16, 2022 to assess conditions and environmental impacts from historical and current use of the site, including existing groundwater data. Groundwater monitoring wells and piezometers associated with the adjacent Cherry Island Landfill were found on the southeastern portion of the Property (Appendix A). Based on information from other studies of groundwater in the surrounding area, Environmental Standards stated that under natural aquifer conditions, shallow groundwater under the Property can be expected to flow southeast to the Delaware River, but Environmental Standards found no leachate or seeps on the Property during the site visit (Appendix A). Assumed groundwater flow direction was considered in an evaluation of off-site properties that may be of concern to the Property. The Salvage Yard Relocation Area II may be an area of concern due to its upgradient location from the Project (Appendix A).

3.5 Wetlands

Using data provided by the USFWS through the National Wetland Inventory (USFWS NWI 2022), within the Property there are approximately 76.5 acres of wetlands and includes 62.6 acres of freshwater emergent wetlands, 7.1 acres of estuarine and marine wetlands, and 6.8 acres of estuarine and marine deepwater (Table 3.5-1; Figure 3.5-1). Most of the

freshwater emergent wetlands have been artificially created due to CDF operations and storage. As part of the construction of the CDF, containment berms have been erected to contain dredged materials. As a result, manmade wetlands within the containment berms developed. The estuarine and marine wetlands are located along the edge of the Christina River and adjacent to the 495 Interstate Highway.

The freshwater emergent wetlands are classified as PEM1Ks, PEM5/SS1Ks, and PEM1/SS4R. The PEM1Ks wetlands are non-tidal wetlands characterized by erect, rooted herbaceous hydrophytes and is dominated by species that normally remain standing until the next growing season. The PEM1Ks wetland is created by artificial flooding, and the main soil type is dredge material, which is defined as material that has been excavated and emplaced by humans. PEM5/SS1Ks wetlands are similar to the PEM1Ks wetland classification described above with the exception that this area is dominated by woody vegetation and the common reed (*Phragmites australis*). The PEM1/SS4R wetlands are also similar to the wetland types described above but are dominated by scrub shrubs and needle-leaved evergreens that are young or stunted in growth. The PEM1/SS4R wetland is seasonally flooded with tidal fresh surface water. This wetland type can be found outside the berms and adjacent to northwestern side of the highway.

Estuarine and marine wetlands habitats are located outside of the berms in two locations within the Property. One area along the 495 Interstate Highway on the western side of the project boundary and another area along the central southern portion of the project boundary adjacent to the Christina River. Both locations have two classifications, E2EM5P and E1UBL. The E2EM5P wetlands are estuarine intertidal wetlands characterized by erect, rooted herbaceous hydrophytes and dominated by perennial plants and the common reed. Tides flood the substrates within these wetlands less often than daily. The E1UBL classification is an estuarine and marine deepwater habitat and is how the Christina River is classified. This habitat can be found on the edge of the Property and is estuarine and subtidal, with unconsolidated bottoms.

Table 3.5-1 Wetlands within the Property

Wetland Type	Classification	Acres
Freshwater Emergent Wetland	PEM1Ks	43.1
Freshwater Emergent Wetland	PEM5/SS1Ks	17.1
Freshwater Emergent Wetland	PEM1/SS4R	2.4
Estuarine and Marine Wetland	E2EM5P	7.1
Estuarine and Marine Deepwater	E1UBL	6.8

USFWS NWI 2022

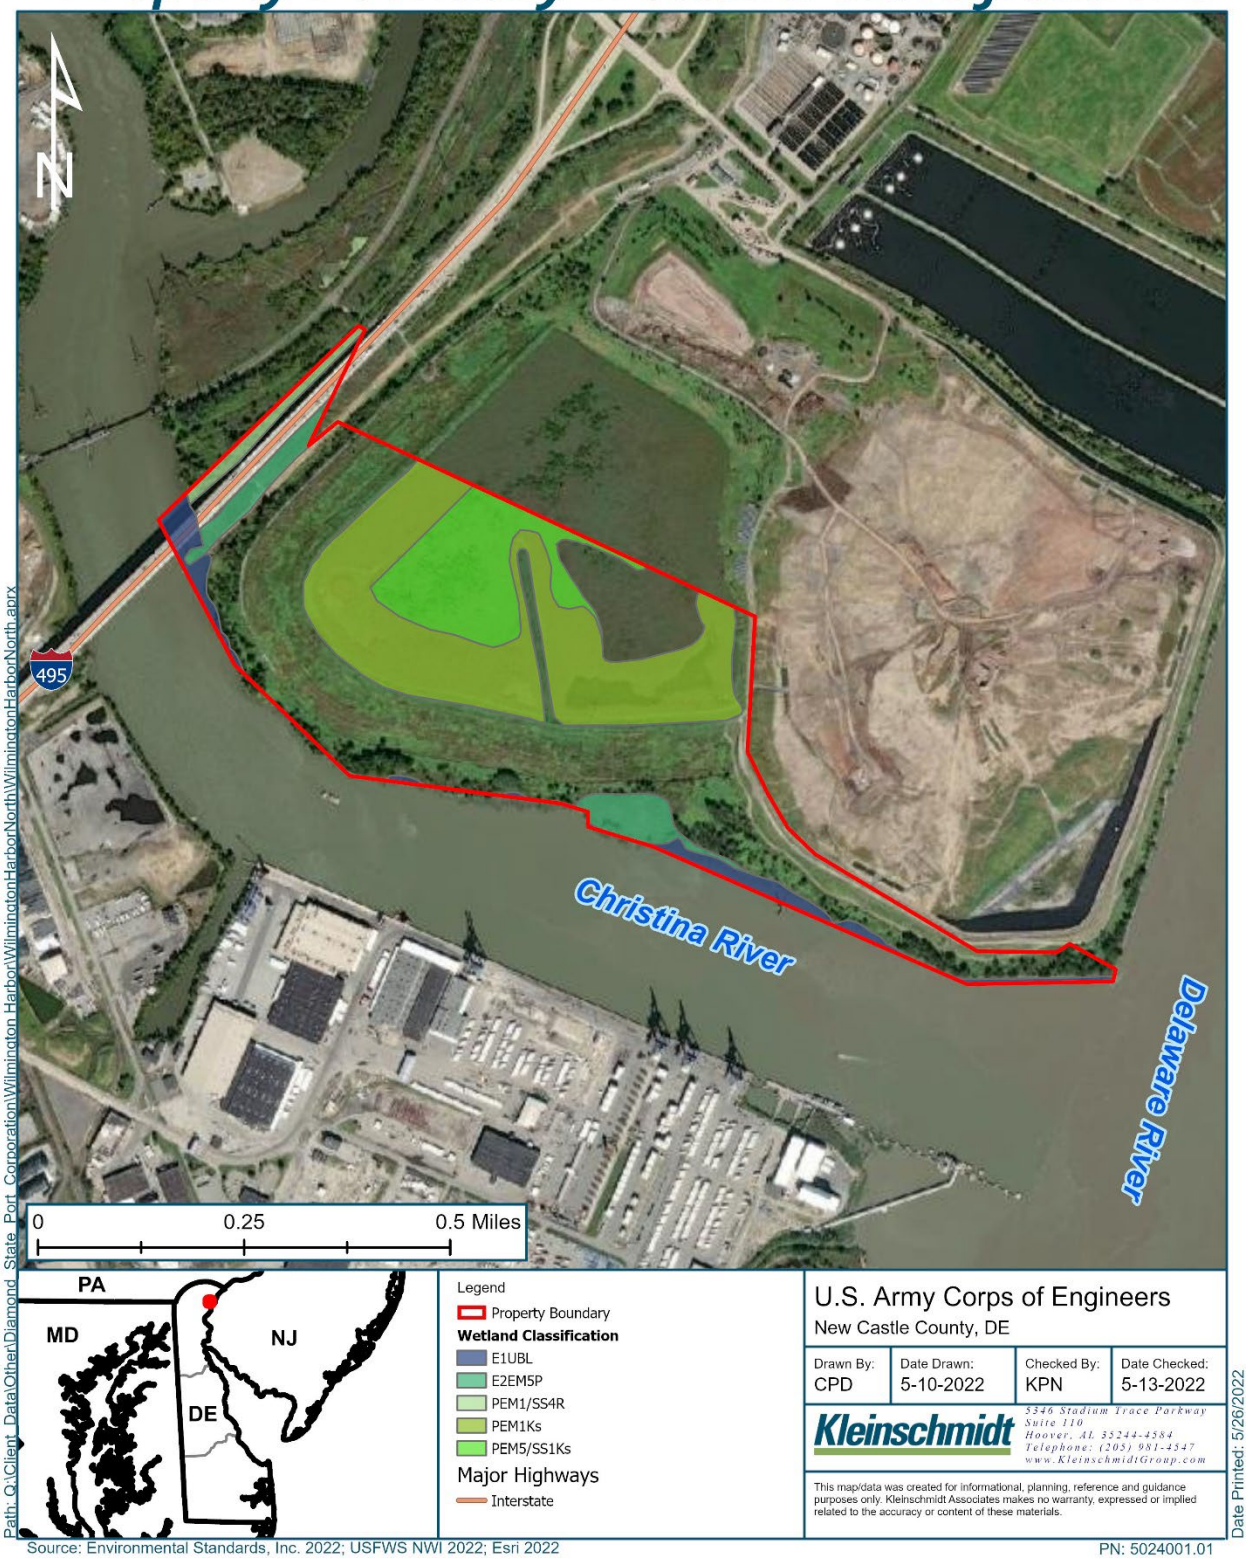

Figure 3.5-1 Wetlands within the Property

3.6 Water Quality

The Delaware River and Estuary occupies over 6,700 square miles in three separate states and extends 134 miles from the mouth of the Delaware Bay to Trenton, New Jersey. The Delaware River supports heavy industrial use, large freshwater port systems, and several refinery areas which have collectively caused water quality concerns throughout history (Santoro 2004). Approximately 13.3 million people rely on the Delaware River for drinking water or industrial use (DRBC 2020). Pollution in the Delaware River has been a concern for centuries, specifically in the tidal reaches of urban areas. These water quality issues were caused by rapid population growth and industrial uses and was evident by waterborne illnesses and the lack of migratory fishes returning to spawn (DRBC 2021). By World War II, the river was so filled with sewage and industrial waste, it turned ships paint brown and people were sickened by the smell of it. There were areas devoid of oxygen and considered a dead zone for aquatic life. In 1961, the federal-interstate agency Delaware River Basin Commission (DRBC) was created, and in 1967 it adopted the most comprehensive water quality standards of any interstate river basin commission in the Nation. By the late 1980s, the introduction of major sewage treatment facility upgrades improved dissolved oxygen (DO) levels (DRBC 2021). In 1989, the DRBC began the Delaware Estuary Toxics Management Program, which was designed to control discharge of toxic pollutants from wastewater treatment plants. The latest toxin criteria were updated in 2010 (DRBC 2021).

There are three ecological zones in the Delaware River that are distinguished by salinity, turbidity, and productivity. The upper zone contains freshwater under tidal influence and flows from Trenton, NJ at river mile (RM) 135 to Marcus Hook, PA (RM 83), which is located approximately 8 miles north of the Property, which is at RM 75. From Marcus Hook to Artificial Island (RM 55), approximately 20 RM downstream of the Property, is considered the transition zone. This zone is characterized by a wide range of salinity from 0 to 15 parts per thousands (ppt), high turbidity, and low primary production. The lower zone is the Delaware Bay which extends into the Atlantic Ocean and has high salinity, primary production, and large areas of shallow water (Santoro 2004).

Dissolved oxygen (DO) levels have shown dramatic improvements when compared to past data. From 1999 to 2004 water quality sampling occurred in areas located upstream of the Property (Rm 85 to RM 111). Average DO was measured at 4.5 mg/L within the area sampled (Santoro 2004). These DO levels provide enough oxygen for bottom feeders, crabs, oysters, and worms, which require a range of DO from 1mg/L to 6 mg/L. Shallow

water fishes require at least 4 mg/L DO and therefore the DO measured was at the lower range biologically required for these fishes (Osmond et al. 1995). During the summer months, seasonal declines in DO are seen, but the 1999 to 2004 data indicated less seasonal decline when compared to the past two decades. Improvements to DO have continued from the 1970's (Santoro 2004).

Bacteria and nutrients in recent years have shown generally positives trends when compared to past data. Sampling from 1998 to 2003 within the main channel of the Delaware River showed mean annual (March to November) bacterial levels below the federal primary contact recreation standards. However, along the shorelines and within the tidal zones, these federal criteria standards were consistently exceeded (Santoro 2004). The Delaware River receives some of the largest nutrient loads of any estuary in the United States, especially in the reaches along Burlington, New Jersey to Wilmington, Delaware (Santoro 2004). The total estimated nitrogen load to the Estuary is about 1.1 × 108 pounds per year; and the total estimated phosphorous load is approximately 2.1 × 107 pounds per year (Sutton et al. 1996). The primary production in the estuary is inhibited by turbidity of the water despite the high nutrient loading (Santoro 1998, Santoro 2004).

Water quality within the Property vicinity was evaluated during the 2020 Water Quality Assessment by DRBC. Based on this assessment, within the Property vicinity, aquatic life is not fully supported due to pH and temperature levels. Consumption of any finfish is also not supported within these areas due to PCBs, dioxins, furans, and dieldrin (DRBC 2020). There are fish consumption limits that exist in all water quality management zones in the Delaware Bay or River, and consumption advisories are issued primarily due to the presence of polychlorinated biphenyls (PCBs) and mercury in fish tissue samples (DRBC 2008, DNREC 2013). Shellfish consumption should only occur within the Delaware Bay area, which is located further downstream from the Property area. Recreational contact with the water is fully supported within the Property vicinity. The area is not used for drinking water (DRBC 2020), but overall water quality has improved when compared to the early 1900's.

3.7 Aquatic Resources

The Delaware River and Estuary inhabits a wide variety of finfish and shellfish that make up a productive commercial and recreational fishery. This productive river stretches 134 miles from the Trenton Falls to the Mouth of the Delaware Bay (Santoro 2004). The Property is located within the Lower Estuary subregion of the Delaware Estuary and Basin (Partnership for the Delaware Estuary 2017). Approximately 85 species have been

recorded in commercial and recreational fisheries within the Delaware River (McHugh 1981). The Delaware Bay provides spawning habitat for the largest concentration of horseshoe crabs during the months of May and June (DDFW, n.d.). The estuary also provides important spawning and nursery areas for many fish species, including American shad (*Alosa sapidissima*), blueback herring (*Alosa aestivalis*), striped bass (*Morone saxatilis*), white perch (*Morone americana*), Atlantic menhaden (*Brevoortia tyrannus*), bay anchovy (*Anchoa mitchilli*), shortnose sturgeon (*Acipenser brevirostrum*), and Atlantic sturgeon (*Acipenser oxyrhynchus oxyrhynchus*) (Pyle 2012).

The largest proportion of fishery biomass in the estuary comes from Atlantic menhaden (McHugh 1981). American shad spawning has returned to the Delaware River following water quality improvements with population fluctuations likely resulting from natural variation. Striped bass population recovery was also notable in 2004 and has been largely attributed to improved water quality. From 1999 to 2004, harvest of striped bass stayed at approximately 2,500,000 to 3,500,000 fish, and estimates indicated juvenile striped bass index will remain high (Santoro 2004). Other important marine species that contribute to the commercial and recreational fishery include weakfish (*Cynoscion regalis*), American eel (*Anguilla rostrata*), bluefish (*Pomatomus saltatrix*), alewife (*Alosa pseudoharengus*), Atlantic croaker (*Micropogonias undulatus*), spot (*Leiostomus xanthurus*), surf clam (*Spisula solidissima*), and blue crab (*Callinectes sapidus*) (McHugh 1981).

The general timeframe for anadromous species activity in the Property vicinity is spring and early summer months where species are migrating upriver to spawning or foraging sites. Juvenile anadromous species start their outmigration in the fall months and some overwinter in deeper waters of Delaware Bay or offshore environments. Adult and juvenile shortnose sturgeon will typically stay within the Delaware River throughout the year. Atlantic sturgeon, particularly juveniles, will utilize fresh and low salinity habitats of the river for several years before out migrating to saltwater environments (Weisberg 1996).

3.8 Terrestrial Resources

3.8.1 Wildlife

The Property is in the Eastern Broadleaf Forest (Oceanic) province. Mammals in the ecoregion include white-tailed deer (*Odocoileus virginianus*), black bear (*Ursus americanus*), bobcat (*Lynxus rufus*), gray fox (*Urocyon cinereoargenteus*), raccoon (*Procyon lotor*), eastern gray squirrel (*Sciurus carolinensis*), fox squirrel (*Sciurus niger)*, eastern chipmunk (*Tamias striatus*), white-footed mouse (*Peromyscus leucopus*), woodland vole

(*Microtus pinetorum*), northern short-tailed shrew (*Blarina brevicauda*), and cotton mouse (*Peromyscus gossypinus*) (USFS 2022). The ecoregion also contains populations of game birds such as turkey (*Meleagris* spp.), ruffed grouse (*Bonasa umbellus*), quail (*Odontophoridae*), and mourning dove (*Zenaida macroura*) and breeding birds such as northern cardinal (*Cardinalis cardinalis*), tufted titmouse (*Baeolophus bicolor*), wood thrush (*Hylocichla mustelina*), summer tanager (*Piranga rubra*), red-eyed vireo (*Vireo olivaceus*), blue-gray gnatcatcher (*Polioptila caerulea*), and Carolina wren (*Thryothorus ludovicianus*) (USFS 2022). Reptiles include the box turtle (*Emydidae*), common garter snake (*Thamnophis sirtalis*), and timber rattlesnake (*Crotalus horridus*) (USFS 2022).

Protected species, including migratory birds and federally protected species, are discussed in Section 3.9, Protected Species.

3.8.2 Vegetation

The Eastern Broadleaf Forest (Oceanic) province is characterized by temperate deciduous forests with tall broadleaf trees that create a dense summer canopy and lose their leaves in the winter. Common tree species include American beech (*Fagus grandifolia*), tuliptree (*Liriodendron tulipfera*), basswoods (*Tillia* spp.), sugar maple (*Acer saccharum*), sweet buckeye (*Aesculus flava*), red oak (*Quercus rubra*), white oak (*Quercus alba*), eastern hemlock (*Tsuga canadensis*), and other species. Chestnut (*Castanea* spp.) was previously common in the area, but blight eradicated most of the species (USFS 2022).

Approximately 76 percent of the Property is covered in herbaceous vegetation with some shrubs and trees populating the bank of the Christina River (Table 3.8-1) (see Figure 3.2-1) (MRLC 2019).

Table 3.8-1 Land Cover of Wilmington Harbor North Confined Disposal Facility

Land Cover of Property	Acreage	Percentage
Barren Land	0.8	0.5
Developed, High Intensity	1.8	1.0
Developed, Medium Intensity	4.1	2.4
Developed, Low Intensity	0.9	0.5
Developed, Open Space	0.2	0.1
Emergent Herbaceous Wetlands	24.4	14.2
Woody Wetlands	0.5	0.3
Herbaceous	131.3	76.5
Shrub/Scrub	3.8	2.2
Open Water	3.9	2.3
Grand Total	**171.7**	**100.00**

3.9 Protected Species

Federally listed endangered and threatened species that could potentially occur within the Property were identified using the USFWS Information for Planning and Consultation (IPaC) website on March 30, 2022 and an updated list was generated in April of 2023. The northern long-eared bat (*Myotis septentrionalis*) was identified as a federally threatened species and the monarch butterfly (*Danaus plexippus*) was identified as a candidate species. Neither species has critical habitat located within the Property (Appendix B, USFWS 2023b).

The northern long-eared bat is listed as an endangered species in Delaware and is listed as federally threatened. It is a medium sized bat with a wingspan of 9 to 10 inches and has long ears with medium to dark brown fur on its back, and pale brown fur on its underside. This species spends winters hibernating in caves, and during the summer in forested habitats. The northern long-eared bat diet consists mainly of insects that they captured by gleaning motionless insects from vegetation in the understory of forested areas (USFWS 2022b). The northern long-eared bat is listed as endangered in the State of Delaware (DNREC 2022). While there may be habitat available within the surrounding area for northern long-eared bats, there is unlikely any suitable habitat for bats for roosting within the Property.

The monarch butterfly is a candidate species for federal listing that was identified as potentially occurring within the Property. The monarch butterfly is a large butterfly with

bright orange wings surrounded by a black border and covered with black veins. During breeding season, monarch butterflies lay their eggs on milkweed (*Asclepias syriaca*) and larvae emerge after two to five days to feed on the milkweed. These species may be found flying over the Property or on milkweed located near or on the Property. There are no Section 7 requirements under the Endangered Species Act for this candidate species but opportunities to protect the species is encouraged (USFWS 2022a). Milkweed is found in a large array of habitats including croplands, pastures, roadsides, ditches, and old fields. Milkweed prefers disturbed land, due to its inability to compete with other vegetation (University of Texas 2020). Within the Atlantic and Gulf Coastal Plain region, milkweed does not grow in wetlands (Lichvar 2013). The Property and surrounding area have disturbed land that could provide habitat for milkweed and therefore could attract monarch butterflies. However, the Property has not been surveyed for milkweed and it is not known if milkweed occurs on Property. The species is not expected to grow within the wetland areas of the Property.

Migratory birds that may occur near the Property are listed in Table 3.9-1 based on the USFWS IPaC. Most birds are listed with a level of concern of Birds of Conservation Concern (BCC), which identifies birds that are migratory or non-migratory that are of highest conservation concern for the USFWS. These birds are listed based on several factors including population abundance and trends, threats to breeding and non-breeding grounds, and ranges (USFWS 2023a). The bald eagle (*Haliaeetus leucocephalus*) is not a BCC but is protected under the Migratory Bird Treaty Act, and Bald and Golden Eagle Protection Act. None of these birds are listed as endangered in the State of Delaware (DNREC 2022).

Table 3.9-1 Migratory Birds that could Potentially Occur within the Property

Common Name	Scientific Name	Status
Bald eagle	*Haliaeetus leucocephalus*	Non-BCC Vulnerable
Bobolink	*Dolichonyx oryzivorus*	BCC
Kentucky warbler	*Geothlypis formosa*	BCC
King rail	*Rallus elegans*	BCC
Lesser yellowlegs	*Tringa flavipes*	BCC
Prairie warbler	*Setophaga discolor*	BCC
Prothonotary warbler	*Protonotaria citrea*	BCC
Rusty blackbird	*Euphagus carolinus*	BCC
Wood thrush	*Hylocichla mustelina*	BCC

3.10 Cultural Resources

3.10.1 History of Delaware

In 1923, the Port of Wilmington was established in the same location where the first Swedish settlers landed in 1638. The Wilmington Port fostered economic growth and new business through activities including shipments of fruit, beef, and imported vehicles, along with supporting petroleum unloading facilities, warehouses and storage facilities, crane operation and jobs to support port operations. The Christina River Project was completed in 1962 with the dredging of the turning basin and channel from the Delaware River to Lobdell Canal. The project was modified in 1988 and the existing Federal channel and turning basin from Station 2+000 to the Delaware River was deepened from 35 to 38 feet and the turning basin was widened from 200 to 320 feet. In 2020, the existing Delaware River Federal Navigation Channel was deepened to 45 feet.

3.10.2 Native Americans

Historically, the Delaware and New Jersey area was home to the Delaware Natives, also called the Lenape. They speak Unami and Munsee dialects which is a form of the Algonquian language. As European colonists encroached on Native American territory, the tribes were pushed westward and eventually settled in Ohio. During the Revolutionary War, the Delaware Tribe became divided. Some tribal members supported the British due to the Proclamation of 1763, which prohibited colonists from expanding further west than the Appalachian Mountains, while other tribe members tried to remain neutral. When the Americans were victorious, the Delaware Tribe struggled to hold onto their land and eventually were forced to surrender most of their lands in 1775. In 1829, they were forced to surrender their remaining lands and moved west of the Mississippi River (Ohio History Connection n.d.).

3.10.3 Current Conditions

Since 1975, there are twelve historic districts designated within the City of Wilmington. These designations help preserve the unique cultural and historic elements of the building structure, objects, and sites within the districts. The closest historic district to the Subject Project is the Old Swedes, located approximately 1.2 miles northwest of the WHN CDF. This historic district contains the Old Swedes (Holy Trinity) Church which was built in 1698 and is the known location of Wilmington's first Swedish Settlement in 1638, known as Christinaham (The City of Wilmington, Department of Planning and Development n.d.).

Bellevue Range Rear Light Station (Bellevue Light Station) is listed as a historic property on the National Register of Historic Places and is located on the WHN CDF Property (Figure 3.10-1 and Figure 3.10-2). The Bellevue Light Station is located on the Christina River, 0.3 miles west of the Delaware River, and 50 feet south of Cherry Island. The Bellevue Light Station was built in 1909 with a pyramidal skeleton of cast iron. It is 105 feet tall with a cylindrical tower that has a watch room and lantern at the top. The Bellevue Light Station was built to serve as the rear beacon of a pair of lights to aid in ship navigation. The light aligned with another in front to mark the channel center light. The lighthouse was operated by resident keepers from 1909 to 1934. In 1934 it become fully automated, and in 2001 it was decommissioned because the light was obstructed by the Cherry Island Landfills elevated elevation. A new lighthouse was placed north of Cherry Island to guide navigation (DHCA 2015). The lighthouse is owned by the United States Coast Guard and is not included in the land transfer.

Figure 3.10-1 Photo of the Bellevue Range Rear Light Station (DHCA 2015)

Figure 3.10-2 Photo of the Bellevue Range Rear Light Station

3.11 Air Quality

The Property is currently designated as a CDF; however, dredge disposal material has not been added to the property since December 2017.

The Clean Air Act set National Ambient Air Quality Standards (NAAQS) for Criteria Air Pollutants (CAPs) in every state. There are six CAPs: carbon monoxide (CO), lead (Pb), nitrogen dioxide (NO_2), ozone (O_3), particle pollution (PM), and sulfur dioxide (SO_2) (DNREC 2019, EPA 2021). PM is classified into two subcategories: fine particulate matter ($PM_{2.5}$), comprised of particles smaller than 2.5 microns in diameter, and particulate matter (PM_{10}), comprised of particles less than 10 microns in diameter (DNREC 2019). Table 3.11-1 describes the current NAAQS for CAPs.

Table 3.11-1 National Ambient Air Quality Standards

Pollutant (Scientific Notation)		Primary/Secondary Standard	Averaging Time	Concentration	Current NAAQS	Form
Carbon Monoxide (CO)		Primary	8 hours	9 ppm	1971	Not to be exceeded more than once per year
			1 hour	35 ppm		
Lead (Pb)		Primary & Secondary	Rolling 3-month period	0.15 µg/m^3		Not to be exceeded
Nitrogen Dioxide (NO_2)		Primary	1 hour	100 ppb	2010	98th percentile of 1-hour daily maximum concentrations, averaged over 3 years
		Primary & Secondary	1 year	53 ppb		Annual mean
Ozone (O_3)		Primary & Secondary	8 hours	0.070 ppm	2015	Annual 4th highest daily maximum 8-hour concentration, averaged over 3 years
Particle Pollution (PM)	$PM_{2.5}$	Primary	1 year	12.0 µg/m^3	2012	Annual mean, averaged over 3 years
		Secondary	1 year	15.0 µg/m^3		Annual mean, averaged over 3 years
		Primary & Secondary	24 hours	35 µg/m^3		98th percentile, averaged over 3 years
	PM_{10}	Primary & Secondary	24 hours	150 µg/m^3		Not to be exceeded more than once per year on average over 3 years
Sulfur Dioxide (SO_2)		Primary	1 hour	75 ppb	2010	99th percentile of 1-hour daily maximum concentrations, averaged over 3 years
		Secondary	3 hours	0.5 ppm		Not to be exceeded more than once per year

Sources: DNREC 2019, EPA 2021

Primary standards: regard public health protection including "sensitive" populations (e.g., asthmatics, children, and the elderly)

Secondary standards: regard public welfare protection, including protection from decreased visibility and damage to resources (e.g., animals, crops, vegetation, and buildings)

The Delaware Department of Natural Resources and Environmental Control (DNREC) Division of Air Quality monitors air quality at designated stations throughout the state of Delaware. The Martin Luther King (MLK) station is located in Wilmington, approximately 1.5 miles from the Project (DNREC 2022) (Figure 3.11-1) and monitors all CAPs and additional pollutants. The state of Delaware is classified as in "non-attainment" for Clean Air Act standards due to levels of ground-level O_3 in exceedance of NAAQS; all other CAPs are in adherence to NAAQS (DNREC 2019).

O_3 is typically not directly emitted as a pollutant but is formed when nitrogen oxides (NO_x) and volatile organic compounds (VOCs) react in sunlight and warm temperatures (DNREC 2019). During dredging, NO_x and VOCs are emitted from motorized vessels, affecting air quality in the immediate vicinity of operation. These effects attenuate after dredging has ceased. Dredging contracts are typically between 21 and 30 days to account for unexpected delays, but most dredging is completed within 14 days. O_3 formation occurs more readily under hot, dry conditions, so ozone exceedance days typically happen in the summer. Exceedance levels of O3 were changed from 0.075 ppm to 0.070 ppm in 2015 and implemented starting in 2016 (Table 3.11-1). O_3 levels measured in New Castle County exceeded 2015 NAAQS for the period of record since implementation of the 2015 NAAQS (design value years[2] 2014-2016 through 2017-2019) (Table 3.11-1).

CO is formed from carbon fuel that is not entirely burned. Approximately 60 percent of all CO emissions are from motor vehicles. The CO NAAQS were implemented in 1971 and have not been at the MLK station for the period of record (1990-2019). There has been a downward trend in CO concentrations since the start of monitoring in the 1970s (DNREC 2019).

NO_x is produced from the burning of fuels from motor vehicles, power plants, industrial boilers, and other machinery that use fossil fuels. Atmospheric deposition is likely a major source of NO_x in bodies of water in Delaware. The NAAQS for NO_2 were changed from ppm to ppb in 2010 and implemented in 2011. NO_2 levels have not exceeded the 2010 1-hour NAAQS at the MLK station for the period of record (design value years 1999-2001 through 2017-2019) and annual averages have not exceeded 2010 NAAQS for the period of record (years 2001-2019) (DNREC 2019).

[2] A design value is defined as a statistical description of air quality relative to the level of NAAQS. Design values are typically 3-year averages of the relevant NAAQS statistic and used to classify nonattainment areas and to assess progress towards complying with the NAAQS (DNREC 2019).

SO_2 is mainly produced by the combustion of coal and oil. Power plants are the greatest source of SO_2 emissions, and other sources include refineries, smelters, and industrial boilers. SO_2 levels have not exceeded the 2010 1-hour NAAQS at the MLK station for the period of record (design value years 1996-2008 through 2017-2019) (DNREC 2019).

Fine particulate matter ($PM_{2.5}$) is generally produced from the combustion of fossil fuels. It can also form in the atmosphere from chemical reactions involving precursor compounds (e.g., SO_2 and NO_x). $PM_{2.5}$ at the MLK station has not exceeded the 2012 Annual NAAQS at the MLK station since implemented (DNREC 2019).

Particulate matter (PM_{10}) is mostly produced by steel mills, power plants, motor vehicles, industrial plants, unpaved roads, and agricultural tilling. The physical and chemical characteristics of PM_{10} are variable due to the variety of sources that contribute to them. PM_{10} levels have not exceeded the standard NAAQS at the MLK station for the period of record, although the monitor did not operate in 2010 (DNREC 2019).

VOCs are pollutants that are suspected or known to cause serious health effects such as cancer or birth defects. Sources of VOCs are highly variable and include power plants, chemical plants, refineries, motor vehicles, dry cleaners, printers, and automobile paint shops. Although there are no ambient standards for VOCs, the MLK station monitors them and reported concentrations of all VOCS below 10 parts per billion (ppb), the majority of which were below 1 ppb in 2019 (DNREC 2019).

Figure 3.11-1 Nearest Air Quality Monitoring Station to the Project Boundary

3.12 Hazardous, Toxic, and Radioactive Waste (HTRW)

The Cherry Island Landfill is an active municipal waste landfill that is adjacent to the Property on the north and east. The landfill has a monitoring program established for groundwater and leachate. Monitoring showed no impact to groundwater at the landfill and surrounding parcels (Appendix A).

Environmental Standards visited the Property on March 16, 2022 to assess conditions and potential environmental impacts, such as hazardous subjects and petroleum product containers. Environmental Standards found no standing water on the Property but reported that standing water is likely to accumulate in the large depression at the disposal area during precipitation. Environmental Standards reported stormwater drainage features, groundwater monitoring wells and piezometers associated with the adjacent Cherry Island Landfill, and one pole-mounted transformer. No PCBs or other hazards were found associated with the transformer. Other features or potential hazards that were searched for but not found included septic systems, drums or storage containers, waste or process water discharge, stained soils or pavement, burning activities, leachate or seeps, stressed vegetation, chemical spills or releases, and surface water contamination. Environmental Standards identified one recognized environmental condition (REC[3]), which was the use of the Property for disposal of dredged material. No other RECs were found during the site visit (Appendix A).

As part of the Delaware River Main Channel Deepening Project NEPA analysis, USACE dredged 15 sediment samples from a reach of the Delaware River ranging from Billingsport Range to Allegheny Avenue, Pittsburgh, PA (approximately 15 to 28 miles upstream of the Property) (USACE 2011; USACE 2013). No maximum, mean, or median concentrations of any contamination parameters exceeded respective criteria (USACE 2013). Sediment samples collected from the upper portion of another reach ranging from the Cherry Island Range to Tinicum Range (approximately 1 mile downstream to 14 miles upstream of the Property) have shown similar levels (USACE 2011; USACE 2013).

[3] The definition of REC according to Environmental Standards (2022) (Appendix A) is "(1) the presence of hazardous substance or petroleum product in, on, or at the Property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the Property due to a release or likely release to the environment; (3) the presence of hazardous substances or petroleum products in, on, or at the Property under conditions that pose a material threat of a future release to the environment."

3.13 Climate Change

Sea level is expected to rise 0.34 meters over the next 100 years (DNREC 2012). The Home Builders Association of Delaware conservatively plans for a 0.5-meter rise in sea level by the year 2100 (DNREC 2012). In New Castle County, sea level increases of 0.5, 1.0, and 1.5 meters would inundate 25,179; 29,916; and 33,148 acres; comprising 9, 11, and 12 percent of the entire county, respectively. The Port of Wilmington was ranked as a high concern resource by Sea Level Rise Advisory Committee groups (DNREC 2012). Industrial facilities and equipment at the Port may become prone to intermittent floods from lunar high tides, which could limit access to the Property and cause flood damage if preventative measures are not taken (Deyle et al. 2007). These issues would become more common as sea levels continue rising. DNREC (2012) analyzed the impact of sea level rise to the Port of Wilmington using GIS polygons from New Castle County tax parcel maps. These polygons marked the locations of DSPC property. The analysis provided information on whether a section of the Port of Wilmington was within an area that could potentially be impacted by sea level rise but was not intended to determine functionality of the port under these conditions. A sea level increase of 0.5 meter would inundate approximately 78 acres (36 percent) of DSPC's core property and approximately 251 acres (20 percent) of the Port of Wilmington's operations and supporting activity properties (DNREC 2012). Because the Port of Wilmington ships and stores hazardous materials, inundation could cause negative impacts to the drinking water, natural habitat, and residential property (DNREC 2012).

4.0 ENVIRONMENTAL CONSEQUENCES

4.1 Socioeconomics

4.1.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.1.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. Because land use would not change under DSPC, no new or additional adverse impacts to socioeconomics are expected to occur under the Proposed Action. While there are minority and low-income populations that exceed 50 percent of the overall population in Wilmington, DE, it is not expected that the Proposed Action (transfer of the property or continued use of the site as a CDF) would have adverse socioeconomic or environmental impacts on these populations.

4.2 Land Use

4.2.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.2.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to land use are expected to occur under the Proposed Action, as the site has been historically designated for, previously used as, and would continue to be used as a CDF for dredge material disposal.

4.3 Geology and Soils

4.3.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.3.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to geology and soils are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal. The site would continue to be managed to promote dewatering and settling of the existing material on site.

4.4 Hydrology

4.4.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.4.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to hydrology are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal. The site would continue to be managed to promote dewatering and settling of the existing material on site. The site has been receiving dredged sediments for decades, which has increased the distance between groundwater and the likelihood of vertical recharge of slurry water and aquifers.

4.5 Wetlands

4.5.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.5.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to wetlands are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal. The freshwater wetlands within the berms are artificially created by CDF operations and therefore would fluctuate based on the amount of dredged material emplaced. The site would continue to be managed to promote dewatering and settling of the existing material on site. The estuarine wetlands outside of the disposal areas would not be adversely impacted by continued disposal of dredged materials. On August 4, 2022, DSPC was issued a Department of the Army Individual Permit for the Port of Wilmington, Edgemoor Expansion Project, which includes continued use of the WHN site as a CDF.

4.6 Water Quality

4.6.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.6.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to water quality are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal. Based on the Phase I Environmental Site Assessment (Appendix A), there was no evidence of leachate, seeps, or surface water contamination at the Property. Continued operations of the CDF would not input any new contaminants into the Delaware River. The site would continue to be managed to promote dewatering and settling of the existing material on site, utilizing Best Management Practices (BMPs). On August 4, 2022, DSPC was issued a Department of the Army Individual Permit for the Port of Wilmington, Edgemoor Expansion Project, which includes continued use of the WHN site as a CDF.

4.7 Aquatic Resources

4.7.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.7.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to aquatic resources are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal. The site would continue to be managed to promote dewatering and consolidation of the existing material on site, with the continued use of Best Management Practices (BMPs). Settlement basins and decanting water reduces contaminant levels and turbidity in the effluent before it is released back into the river. Dredging, and associated dredged material placement operations are typically conducted outside the anadromous fish migration period.

4.8 Terrestrial Resources

4.8.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.8.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to terrestrial resources are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal.

4.9 Protected Species

4.9.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.9.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to protected species are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal.

4.10 Cultural Resources

4.10.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.10.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to cultural resources are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal. Ingress and egress to the Bellevue Light Station would be maintained under DSPC ownership.

4.11 Air Quality

4.11.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.11.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. No new or additional adverse impacts to air quality are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal. Operation of the CDF by USACE did not result in exceedance of air quality standards.

4.12 Hazardous, Toxic, and Radioactive Waste (HTRW)

4.12.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation.

4.12.2 Proposed Action

Under the Proposed Action, the Property would transfer to DSPC for continued use as a CDF. The composition of the dredge material being disposed would not change, therefore no new adverse impacts from hazardous, toxic, and radioactive waste are expected to occur under the Proposed Action, as the site has been historically designated for, and used as, a CDF for dredge material disposal.

4.13 Climate Change

4.13.1 No Action Alternative

Under the No Action Alternative, DSPC would not take ownership of the Property. The Property would transfer to the GSA as excess property. Future uses and potential impacts would be evaluated under separate NEPA documentation. Without additional mitigation measures (macro-scale to slow down the threat of climate change, or local to enhance coastal resiliency), potential impacts to the Property from Climate Change would continue regardless of ownership of the site.

4.13.2 Proposed Action

Under the Proposed Action, there are no anticipated impacts resulting to or from climate change as a result of the land transfer. The Property would continue to be used as a CDF under DSPC ownership, and activities consistent with use of the Property as a dredge material disposal site would continue to occur. Greenhouse gas emissions would continue

to occur from dredging and/or site improvement equipment (when used), but the very limited frequency of use would not result in significant, adverse impacts to climate change from continued use of the site as a CDF.

4.14 Cumulative Impacts

The State of Delaware signed a 50-year concession agreement to expand the Port of Wilmington in October 2018 (DSPC 2020). The Wilmington Harbor-Edgemoor Expansion Project was evaluated in an Environmental Assessment (EA). In June 2020, USACE determined that "the proposed action would have no significant social, economic, or environmental impacts that would necessitate an Environmental Impact Statement" (DSPC 2020). The Proposed Action evaluated in this EA (for the transfer of Property from USACE to DSPC) would result in no new or additional adverse impacts on environmental, socioeconomic, and cultural resources, therefore the cumulative impacts from the Proposed Action when added to the Port of Wilmington Expansion are not expected to contribute any additional adverse impacts. Under 40 CFR 1501.12, the Cumulative Impacts Analysis presented in the Wilmington Harbor-Edgemoor Expansion Project EA (DSPC 2020) is incorporated into this Land Transfer EA by reference.

5.0 COMPLIANCE WITH ENVIRONMENTAL LAWS AND REGULATIONS

This Final EA fulfills the requirements of NEPA and discloses how the Proposed Action is compliant with multiple environmental laws and regulations, either independently or under the umbrella of the NEPA, as discussed below.

5.1 National Environmental Policy Act of 1969 (NEPA)

This Final EA has been developed to evaluate the potential impacts of the proposed land conveyance and the No-Action Alternative. This document and process comply with the intent of the National Environmental Policy Act of 1969, as amended, 42 U.S.C. 4321, *et seq*. P.L. 91-190.

5.2 Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations

This Final EA evaluates the impacts of the Proposed Action and No-Action alternative on socioeconomic resources and minority and low-income communities within the vicinity of the project. This is in compliance with the Executive Order 12898 which requires Federal agencies to analyze if a Proposed Action would have a disproportionate adverse effect on minority populations, low-income populations or Native American Tribes. While there are minority and low-income populations that exceed 50 percent of the overall population in Wilmington, DE, the transfer and continued use of the CDF would not have adverse socioeconomic or environmental impacts on these populations.

5.3 Endangered Species Act of 1973

Pursuant to Section 7 of the Endangered Species Act of 1973, USACE requested concurrence from National Marine Fisheries Service (NMFS) that the Proposed Action (land transfer) will have no impact on federally listed species or critical habitat. On March 23, 2023, NMFS concurred with this determination (Appendix C).

Pursuant to Section 7 of the Endangered Species Act of 1973, USACE requested initiation of informal consultation with U.S. Fish and Wildlife Service (USWFS). An IpaC search was completed on March 30, 2022 and renewed on April 21, 2023 (Appendix B). This report was used to identify endangered or threatened species and their designated critical habitat that could exist within the Property, as discussed in Section 3.9. The IpaC identified the Northern Long-eared Bat (Endangered Species) and the Monarch Butterfly (Candidate

Species); no critical habitat was identified. On May 3, 2023, USFWS provided a "Record of project representative's no effect determination for Wilmington Harbor North EA" for the northern long-eared bat (Appendix B) (USFWS 2023a). The land transfer of the DSPC has a determination of no effect to federally listed species or critical habitat under the Endangered Species Act of 1973, as amended, 16 U.S.C. 1531, *et seq*. P.L. 93-205.

5.4 Fish & Wildlife Coordination Act of 1958

Consultation pursuant to the Fish and Wildlife Coordination Act has been completed with the U.S. Fish and Wildlife Service (April 19, 2023) and National Marine Fisheries Service (March 23, 2023) (Appendix C). The Proposed Action is in compliance with this Act.

5.5 Migratory Bird Treaty Act (MBTA)

The Migratory Bird Treaty Act (MBTA) (16 USC 715- 715s) prohibits the taking or harming of migratory birds, eggs, or nests. Although migratory birds have been identified within the vicinity of the Property, no adverse impacts to these species were identified. The Proposed action is in compliance with this Act.

5.6 Clean Water Act of 1972

Pursuant to the Clean Water Act of 1972, as amended, a Section 401 Water Quality Certification from DNREC for the Proposed Action (land transfer) is not required as there will be no discharge into waters of the United States. If a Water Quality Certification is required for activities after the land transfer, it will be obtained by DSPC.

A Section 404 permit is not required for the Proposed Action (land transfer) as there will be no discharge of dredge and fill materials into waters of the United States. DSPC has already received a Department of the Army Section 404 permit August 4, 2022 for the Port of Wilmington Expansion Project at Edgemoor; this permit includes continued use of the Wilmington Harbor North area as a CDF.

5.7 Clean Air Act of 1972

Pursuant to the Clean Air Act, the EPA sets National Ambient Air Quality Standards (NAAQS) for Criteria Air Pollutants (CAPs) in every state. The DNREC Division of Air Quality monitors CAPs and other air pollutants in the City of Wilmington approximately 1.5 miles from the Property. The state of Delaware, including the Wilmington area, is in "non-attainment" for Clean Air Act standards due to levels of ground-level O_3 in exceedance of NAAQS; all other CAPs are in adherence to NAAQS (DNREC 2019). No additional adverse

impacts to air quality are expected to occur under the Proposed Action (land transfer). Additionally, since the site has been historically designated for/used as a CDF for dredge material disposal, operation of the CDF by USACE did not result in exceedance of air quality standards, nor should continued use of the CDF by DSPC.

5.8 National Historic Preservation Act (NHPA)

The National Historic Preservation Act (NHPA) requires Federal agencies to assess a project's impacts to historic properties and coordinate with the Advisory Council on Historic Presentation (ACHP). The Proposed Action is in compliance with this Act as no cultural resources would be affected. The Delaware Division of Historical and Cultural Affairs provided a letter May 10, 2023 indicating "No Adverse Effect to historic properties by the proposed undertaking" (Appendix C).

5.9 Coastal Zone Management Act of 1972

Pursuant to the Coastal Zone Management Act (CZMA) of 1972, as amended, each federal agency activity within or outside of the coastal zone that can have reasonably foreseeable effects on any land or water use or natural resource of the coastal zone shall be carried out in a manner which is consistent to the maximum extent practicable with the enforceable policies of the state's approved program. USACE determined that the proposed land transfer will not have any reasonably foreseeable effects on Delaware's coastal uses or resources and is consistent with the enforceable policies of the Delaware Coastal Management Program. In a letter dated May 11, 2023, DNREC concurred that the project would result in no coastal effects.

5.10 Farmland Protection Policy Act of 1981

No prime or unique farmland would be impacted by implementation of the proposed action. This Act is not applicable to this project.

5.11 Wild and Scenic River Act of 1968

No designated Wild and Scenic River reaches would be affected by the proposed action or future activities. This Act is not applicable to this project.

5.12 Marine Mammal Protection Act of 1972

The Marine Mammal Protection Act intends to prevent the taking or harm of Marine Mammals in United States waters. The Proposed Activity is not expected to impact marine mammals or their habitats. Therefore, this Act is not applicable to this project.

5.13 Estuary Protection Act of 1968

In the Estuary Protection Act of 1968, Congress declared that "many estuaries in the United States are rich in a variety of natural, commercial and other resources, including environmental natural beauty, and are of immediate and potential value to the present and future generations of Americans." This Act is intended to protect, conserve, and restore estuaries in balance with developing them to further the growth and development of the Nation. No development will occur under the Proposed Action. Therefore, the Proposed Action is consistent with the purposes of this Act.

5.14 Federal Water Project Recreation Act

This Act provides funds for land acquisition or directs non-Federal agencies to administer project land and water areas for recreation and fish and wildlife enhancement. In addition, while investigating and planning a federal navigation, flood control reclamation, hydroelectric or multi-purpose water resource project, full consideration must be given to the opportunities when the project affords for outdoor recreation and fish and wildlife enhancement. This Act is not applicable to this project.

5.15 Submerged Lands Act of 1953

The Property does not occur on submerged lands of the State of Delaware. This Act is not applicable to this project.

5.16 Coastal Barrier Resources Act and Coastal Barrier Improvement Act of 1990

The Coastal Barrier Resources Act (CBRA) and the Coastal Barrier Improvement Act of 1990 (CBIA) limit Federally subsidized development within CBRA Units to limit the loss of human life by discouraging development in high-risk areas, to reduce wasteful expenditures of Federal resources and to protect the natural resources associated with coastal barriers. This Act is not applicable to this project.

6.0 COORDINATION AND PUBLIC INVOLVEMENT

This Final EA has been noticed for 30-day public review (March 22, 2023 to April 21, 2023). Additional information regarding agency coordination and public involvement is included in Appendix C.

1.0 Executive Summary

Under contract to the Diamond State Port Corporation (DSPC), Environmental Standards, Inc. (Environmental Standards) conducted a Phase I Environmental Site Assessment (ESA) of the property located at 1706 E 12th Street (Tax Parcel identifications [IDs] 26-065.00-002, 26-064.00-001, 26-059.00-002, and 26-059.00-001), Wilmington, New Castle County, DE 19801 (subject Property or Site). The parcels contained within the subject Property are also referred to as the following addresses: 1718 East 12th Street, 1716 East 12th Street, 1710 East 12th Street, 1712 East 12th Street, and 0 East Fourth Street, Wilmington, New Castle County, DE 19801.

The subject Property totals approximately 172 acres and is located in a mainly commercial and industrial use area of Wilmington, Delaware (Figures 1 and 2).

Known historical development of the subject Property dates to at least 1914 when dredged material disposal began (U.S. Army Corps of Engineers [USACE], 2016). Previously, the subject Property consisted of undeveloped marshlands as shown on the 1904 and 1906 topographic maps. The subject Property is not currently being used for active dredge material placement.

The ESA was conducted in general conformance with the ASTM International (ASTM) standard for conducting Phase I ESAs (E1527-21) and the US EPA's All Appropriate Inquiry Regulation (AAI; 40 CFR Part 312, as published in the *Federal Register* on December 30, 2013, FR Vol. 78. No. 250). Record and database reviews; interviews; reviews of historical topographic maps, Sanborn® maps, aerial photographs; and a site reconnaissance were conducted by Environmental Standards' Environmental Professionals (EPs) as part of this ESA.

One recognized environmental condition (REC) was identified in connection with the subject Property.

- The use of the subject Property as a dredge material disposal area represents a REC. The dredge material disposed of at the subject Property was sourced from the adjacent rivers. As such, it is likely that environmentally-impacted material has been placed in the disposal facility.

One significant data gap was also identified during the Phase I ESA process.

- The identified Salvage Yard Relocation Area II, located at the intersection of 12th street and Route 495 represents a data gap. The Salvage Yard was included in the US BROWNFIELDS and DE SHWS databases, indicating that the property has undergone or is undergoing environmental investigations. The facility's proximity and upgradient position relative to the subject Property indicated that a release would have the potential to impact the subject Property. Environmental Standards was unable to determine the current status of the property through additional research and file requests with environmental agencies.

2.0 Introduction

2.1 Purpose

Environmental Standards was retained by DSPC, to conduct a Phase I ESA of the Property located 1706 East 12th Street (Tax Parcel IDs 126-065.00-002, 26-064.00-001, 26-059.00-002, and 26-059.00-001), Wilmington, New Castle County, Delaware (subject Property or Site). The subject Property is identified in Figures 1 and 2. Environmental Standards completed a site reconnaissance visit on March 16, 2022.

Environmental Standards completed this work in general accordance with ASTM standards for conducting Phase I ESAs (ASTM Standard E1527-21). On November 1, 2021, ASTM announced the publication of an updated Phase I ESA Standard, E1527-21, which replaced the previous standard, E1527-13. On December 30, 2013, US EPA published in the *Federal Register* at Volume 78, No. 250, pages 79319-79324, 40 CFR Part 312 (US EPA–HQ–SFUND–2013–0513; FRL–9904–52–OSWER) the Amendment to Standards and Practices for AAI under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This final action adopted ASTM E1527-13 and made clear that "persons conducting all appropriate inquiries may use the procedures in [the] standard to comply with the All-Appropriate Inquiry Rule." Although Environmental Standards conducted this ESA according to E1527-21, the ESA also met the requirements of E1527-13 and, therefore, represents an AAI-compliant Phase I ESA.

Environmental Standards' services as part of this Phase I ESA included a review of reasonably ascertainable regulatory databases and historical records; interviews with personnel who may know about environmental conditions at the subject Property; an assessment of user-provided information about the Property; a site reconnaissance; and a report of findings associated with the investigation.

The overall objective of the Phase I ESA services provided by Environmental Standards was to identify, to the extent feasible pursuant to the processes described herein, RECs in connection with the subject Property.

2.2 Detailed Scope-of-Services

The Scope-of-Services provided by Environmental Standards for this Phase I ESA was in general accordance with ASTM E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The objective of this study, and Phase I ESAs in general, is to identify RECs and to satisfy a portion of the ESA requirements necessary to qualify for as an "innocent landowner," a "*bona fide* prospective purchaser," or a "contiguous landowner" associated with CERCLA liability and the "Standards and Practices for All Appropriate Inquiries." Environmental Standards' services consisted of five tasks described below.

Task 1: Regulatory Review

Environmental Standards conducted a regulatory database review utilizing a commercially contracted environmental database collection service. The review included examining the local geographical area surrounding the Site for listed regulatory environmental records. EDR of Southport, Connecticut, provided a map depicting locations of potential off-site environmental concerns listed on available state and federal environmental databases within a specified radius of the Property. Appendix A contains the EDR Radius Map Report for the Property.

In addition to reviewing the information contained in the database search, Environmental Standards directly contacted local agencies regarding issues related to potential environmental conditions at the Site and neighboring properties. Inquiries into the existence of environmental records maintained by the Delaware Department of Natural Resources and Environmental Control (DNREC); US EPA Region 3; New Castle County, and City of Wilmington, were also made as part of this Phase I ESA.

This assessment also included reviewing information about local geology and hydrogeology, existing groundwater quality data, and potential environmental issues associated with the subject Property. Environmental Standards examined only those aspects of the Property for which information was reasonably ascertainable. For this work, *reasonably ascertainable* is defined as it is in ASTM E1527-21: "publicly available, obtainable from its source within reasonable time and cost constraints, and practically reviewable."

Task 2: Interviews

Environmental Standards contacted knowledgeable individuals, as identified by project stakeholders, to discuss general environmental conditions related to the Property. Discussions and data collection included information such as availability of Site plans and drawings, Site history, environmental permits, the presence of buildings, underground storage tanks (USTs), aboveground storage tanks (ASTs), and knowledge of off-site issues.

Task 3: Site History

Environmental Standards reviewed, to the degree reasonably ascertainable, copies of topographic maps (Appendix B), aerial photographs (Appendix C), sanborn maps (Appendix D) and the City Directory Abstract (Appendix E) to evaluate past land use and activities that may have the potential for an adverse environmental impact on the subject Property.

Task 4: On-site Reconnaissance

Environmental Standards visited and reviewed readily accessible portions of the subject Property to assess present conditions and to note potential evidence of environmental impacts. Environmental Standards' staff traversed the subject Property on foot and made observations (in general compliance with ASTM Standard E1527-21) for the recognizable presence or evidence of the following:

- Storage tanks: aboveground, underground, vent pipes, fill pipes, or access ways.
- Strong, pungent, or noxious odors.
- Pools of liquid: standing surface water, pools, or sumps.
- Drums greater than 5 gallons in size.
- Hazardous substances and/or petroleum product containers.
- Open or damaged containers of unknown substances.
- Polychlorinated biphenyls (PCBs); electrical or hydraulic equipment (excluding fluorescent light ballasts).
- Heating and cooling fuel source.
- Stains or corrosion on floors, walls, or ceilings.
- Drains and sumps.
- Pits, ponds, or lagoons on or adjacent to the Property.
- Stained soil or pavement.

- Areas of dead, distressed, or dying vegetation.
- Solid waste; mounds or depressions that would indicate non-natural filling or grading.
- Wastewater discharges and outfalls.
- Wells: potable, dry, irrigation, injection, abandoned, and other types of wells.
- Septic systems or cesspools.

During this on-site inspection, Environmental Standards also evaluated adjacent properties for the potential to contribute to the environmental degradation of the subject Property. Environmental Standards documented the condition of the subject Property and adjacent properties on the day of the Site visit with photographs. Other than an external visual inspection, Environmental Standards did not access private, adjoining, third-party properties during the Site visit.

Task 5: Report of Findings

Environmental Standards summarized the information and data obtained from completing the preceding tasks in an environmental assessment report (*i.e.*, this document) that presents a review of findings, including identified RECs, controlled RECs (cRECs), historical RECs (hRECs), and *de minimis* conditions if any. Below are the ASTM E1527-21 definitions of each of these types of findings:

- REC – (1) the presence of hazardous substance or petroleum product in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.
- cREC – A REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).
- hREC – A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example activity and use limitations or other property use limitations).
- *De minimis* condition– A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

This report also includes color copies of photographs taken for documentation purposes (Photographic Log following Section 15.0 of this report).

2.3 Significant Assumptions

Environmental Standards reviewed the following documentation: reasonably ascertainable historical aerial photographs; topographic maps; historical Sanborn maps; federal and state environmental agency records created by a contracted environmental database company (EDR); and other reasonably ascertainable records regarding the Property. Although the reviews followed general ASTM Standard E1527-21 and US EPA's AAI methodology and are considered

reasonable and professionally appropriate, Environmental Standards does not warrant or guarantee that these reviews necessarily yielded complete and accurate information.

To the extent that Environmental Standards' services required judgment, there can be no assurance that fully definitive results were obtained. The services provided to the Client may include the application of judgment to site evaluation principles; accordingly, certain results of this work may be based on subjective interpretation.

2.4 Limitations and Exceptions

Environmental Standards is not engaged in environmental auditing and reporting for the purpose of advertising, sales promotion, or endorsement of any user's interests, including raising investment capital, recommending investment decisions, or other publicity purposes.

Under the AAI Regulation and ASTM E1527-21, Environmental Standards will not make specific determinations regarding the existence of suspected lead-containing paint, suspected asbestos, or suspected asbestos-containing materials on the Property or within structures on Site as part of these Phase I ESA activities.

Nothing contained in this report by Environmental Standards shall be construed as a warranty or affirmation by Environmental Standards that the Property described in this report is suitable collateral for any loan or that acquisition of such Property by any lender through foreclosure proceedings or otherwise will pose no risk of potential environmental liability on the part of such lender.

2.5 Special Terms and Conditions

Although ASTM Standard E1527-21 and the AAI Regulation indicate that the standard practice is intended to permit a user to satisfy one of the requirements to qualify as an innocent landowner relating to CERCLA liability, Environmental Standards does not represent that this work, in and of itself, constitutes "all appropriate inquiry into the previous ownership and uses of the property," as this phrase is used in Section 101 (35)(B) of the Federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended through PL 99-499 (October 17, 1986) and 42 USC 9601 (35)(B).

2.6 User Reliance

Any user of this document acknowledges that the document was prepared by Environmental Standards for the exclusive use of DSPC. DSPC agrees that Environmental Standards' reports and correspondences will not be used or reproduced, in full or in part, for promotional purposes and may not be used or relied upon in any prospectus or offering circular without prior written consent. Any user also agrees that none of its advertising, sales promotion, or other publicity matter containing information obtained from this ESA and report will make reference to Environmental Standards' trade name.

Users who rely on this information do so at their peril and specifically acknowledge that the findings described herein do not indicate that the property evaluated is fit for any particular use.

The information provided in this report is not to be construed as legal advice.

3.0 Site Description and Use

3.1 Property Information

The subject Property is comprised of five individual tax parcels as summarized below.

Municipality	City of Wilmington
County	New Castle
Parcel IDs	26-065.00-002, 26-064.00-001, 26-059.00-002, 26-059.00-001
Total Property Size	Approximately 172 acres
# of Buildings	0
Roads	North – East 12th Street East – No roads adjacent to the east South – No roads adjacent to the east West – I-495

The following table provides a summary of the individual parcels that comprise the subject Property and parcel IDs according to New Castle County Public Records.

Address	Parcel ID
1718 East 12th Street	26-065.00-002
1716 East 12th Street	26-064.00-001
1710 East 12th Street	26-059.00-002
1712 East 12th Street	26-059.00-001

Determination of the specific land survey boundary for the subject Property is not included in the scope of this Phase I ESA, and Environmental Standards did not complete a land survey as part of this assessment.

3.2 Building Information

The subject Property does not currently include buildings.

3.3 Adjacent Property Uses

North	Cherry Island Landfill
East	Cherry Island Landfill and Delaware River, Residential properties along eastern shore of river.
South	Christina River, industrial/commercial properties including the Port of Wilmington along southern shore of River.
West	Christina River, undeveloped properties.

3.4 Utilities

Electric	An electrical service utility access manhole was observed in the southern portion of the Property.
Transformer(s)	One pole-mounted transformer was observed near the lighthouse at the southern edge of the Property.
Generator(s)	None.
Heating System	Not applicable.
Water	None.
Sewer	None.
Natural Gas	Not connected.
Stormwater	Stormwater management features including berms, drains, and outfall structures are present at the subject Property.
Underground Storage Tank	None.
Aboveground Storage Tank	None.

4.0 User-provided Information

4.1 Title/Property Use Records

Environmental Standards was not provided with Chain-of-Title information by the client.

4.2 Environmental Liens or Activity and Use Limitations

According to Section 6.2 of E1527-21, the User is responsible for the review of title and judicial records for environmental liens and activity use limitations (AULs). The User's search for environmental liens and AULs is in addition to the EP's search of *institutional control* and *engineering control* registries, if available (Section 5 of this Report). As such, Environmental Standards did not conduct a lien search for the subject Property. The EDR radius report did not identify any activity use limitations at the subject Property.

4.3 Valuation Reduction for Environmental Issues

According to Section 6.5 of E1527-21, the User shall consider the relationship of the purchase price of the subject Property to the fair market value of the property. As described in Section 7 of this report, the User considered the listed purchase price to reflect fair market value.

5.0 Records Review

Environmental Standards commissioned a computer-based environmental information database search of federal and state regulatory databases for environmental information on sites located within ASTM E1527-21 recommended Phase I ESA radii of the Property through EDR. A copy of the EDR Radius Map Report is provided in Appendix A.

5.1 Standard Environmental Record Sources

This Phase I ESA included a computer-based search of federal and state regulatory databases for environmental information on sites located within ASTM-recommended Phase I ESA radii of the subject Property through EDR. Standard environmental record sources included both federal and state databases.

Subject Property

The EDR radii search identified the 10 records detailed below as the subject Property. However, after a review of these entries, it was apparent that the identified "subject Property" records are associated with tax parcels to the north and east of the subject Property that are part of the Cherry Island Landfill and not the actual Subject Property. There were no returns in the EDR search that were associated with the subject Property.

Gate 2 Pavement Improvement at the Cherry Island Landfill was listed in the FINDS database. The record was created on December 18, 2012, and is associated with Gate 2 pavement improvement work. There was little detail provided in this record.

Phases I/II Landfill Gas Header Construction was listed in the FINDS database. The FINDS database or the Facility Index System contains facility information to other sources that contain more detail on the subject Property. There was little detail provided in this record.

DSWA Northern SW Management Cntr (Cherry Island Landfill) was listed in the FINDs database. There was little detail provided in this record.

Cherry Island Renewable Energy, LLC was listed in the DE AIRS, DE ENF, and DE UIC databases. The ENF database record noted that this Property is an active municipal landfill that has an air-monitoring system in place. The ENF database referenced a violation that occurred on 7/21/2010, regarding irregularities discovered during a routine inspection. The inspection showed that the H2S pretreatment system was not operating in conjunction with 2 enclosed flares for the quantity of time specified in the permit.

Cherry Island Landfill was listed in the DE AST database. The database did not provide specific information regarding ASTs at the property.

Delaware Solid Waste Authority, Cherry Island/ Cherry Island Renewable Energy, LLC was listed in the ICIS and US AIRS databases. The ICIS and US AIRS databases provide some of the administrative details and permit numbers of the Cherry Island Landfill air-monitoring system. The ICIS database includes multiple notice of violations (NOVs) that were attributed to the landfill. There are six NOVs that are categorized as "Administrative – Informal" or "Administrative – Formal," the database does not provide additional information on the nature of the NOVs. The US AIRS database contains information on compliance monitoring inspections and evaluations that occur at the landfill. The database does not go into detail on the nature of the compliance

monitoring inspections. Like the ICIS database, the US AIRS database noted a number of NOVs that are categorized as “Administrative – Informal” or “Administrative – Formal,” the database did not provide additional information on the nature of the NOVs.

CHERRY ISLAND RENEWABLE ENERGY, LLC was listed in the ICIS and FINDS databases. The ICIS database notes a ‘CAA 113D1 Action For Penalty” enforcement violation. The ICIS database did not provide additional information relative to the property. The FINDS database notes the property is subject to an air quality permit. The database did not provide additional information relative to the subject Property.

DSWA CHERRY ISLAND LANDFILL (NSWMC) was listed in the RCRA-VSQG, FINDS, and ECHO databases. The RCRA-VSQG databases indicate that Property is a “Conditionally Exempt Small Quantity Generator.” The database record also noted a number of violations that were reported at the Property, while the database does not provide much information on the nature of the violations noted, they are categorized as “Universal Waste – small quantity generators, General - Listing, Used oil – Generators or Compliance Evaluation Inspection On-Site.” The FINDS and ECHO databases provide little additional information.

DELAWARE SOLID WASTE AUTHORITY was listed in the DE SWF/LF and DE TIER 2 databases. The TIER 2 database record indicated that Property stores or manufactures hazardous materials and is required to submit a chemical inventory report. The database record noted the property stores and uses anti-freezing compounds, brake fluid, diesel exhaust fluid, motor oil, and windshield washer fluid.

DE SOLID WASTE AUTHORITY, CHERRY ISLAND was listed in the FINDS and ECHO database. The ECHO database provides integrated compliance and enforcement information for a number of regulated facilities nationwide. The database includes background information on compliance and inspection information at the Cherry Island Landfill. The database noted the facility has an air-quality monitoring permit and includes a comprehensive review of past quarterly evaluations of the facilities air-monitoring system. The database also noted that over the past 3 years, no violations have been recorded for the facility.

Off-site Properties

One-hundred-and-thirty-two off-site records were identified within the environmental database search results. These records were initially reviewed for distance and location to evaluate if there was a potential for these sites to impact the subject Property. Eleven off-site properties were identified as potential sites of concern relative to the subject Property and were further evaluated by reviewing the records and information contained therein. Assumed groundwater flow direction was also considered during this evaluation. A summary of these sites and the conclusions relative to their likelihood to impact the subject Property are presented below. The environmental conditions associated with the off-site property records provided do not appear to have the potential to impact the subject Property.

Salvage Yard Relocation Area II, at intersection of 12th Street and Route 495 (0.177 miles north, lower elevation), was listed in the US BROWNFIELDS and DE SHWS databases. The US BROWNFIELDS database stated that a Phase II ESA was completed on August 26, 2000. The DE SHWS database did not provide additional meaningful detail regarding this site. The facility’s close proximity and upgradient position relative to the subject Property indicates that a release would have the potential to impact the subject Property. Due to the Salvage Yard site potential to impact the subject property, additional records were requested by Environmental Standards;

however, additional records were not identified by DNREC or US EPA in response to these requests. Due to the regulatory status of this site (a known brownfield site with previous environmental work completed) and lack of additional information, this site cannot be completely ruled out as a concern and is therefore considered to be a significant data gap. A significant data gap is further defined in section 8.0.

Up The Creek Restaurant and River Associates, at 1195 East 7th Street (0.218 miles northwest, lower elevation), was listed in the BROWNFIELDS, AST, RCRA NONGEN/NLR FINDS and SHWS INST CONTROL databases. RCRA NONGEN/NLR FINDS verified that there is no longer a generator on site. The AST database confirmed there is an AST on site. The SHWS and INST CONROL databases indicated the site was a state-funded brownfield with deed restrictions. Restrictions include: 1) Interference with remedy. 2) Limitation of Groundwater withdraw. 3) Compliance with LTS Plan and CMMP. The DE SHWS database did not provide additional meaningful information about this site. Based on the position of this site, across the Brandywine Creek, and the regulatory status, it is unlikely that this site currently represents an environmental risk to the subject Property.

DP&L Substation/ Dupont Christina Labs, at 500 Christina Ave (0.233 miles east, lower Elevation), was listed in the DE SHWS, US BROWNFIELDS FINDS databases. The US BROWNFIELDS database shows a US EPA Phase II ESA was completed on February 1, 1998. There were no TSCA chemicals reported on-site. Based on the position of the site, across the Christina River, it is unlikely that this site currently represents an environmental risk to the subject Property.

Halby Chemical, at 600 Terminal Avenue (0.442 miles south, lower elevation), was listed in the DE SHWS and DE INST CONTROL databases. SEMS reported 28 contaminants found in groundwater and soil. The RCRA info database reported D003 Waste Code – Reactive Waste. Based on the position of the site, across the Christina River, it is unlikely that this site currently represents an environmental risk to the subject Property.

Sixty-five off-site records were located within ¼ of a mile and ½ of the Subject Property. Sixty-three of the off-site records are located across a body of water, either the Christina River or Brandywine Creek. The two additional records are located at a lower elevation than the subject Property indicating a minimal risk to the Subject Property.

Seventy-three off-site records were located within ½ mile and 1 mile from the subject Property. Seven-two of these off-site records are located across a body of water, either the Christina River or Brandywine Creek. The remaining record is located at a lower elevation than the subject Property indicating a minimal risk to the subject Property.

5.2 Vapor Encroachment Screening

Based on the ASTM E 2600-10 *Vapor Encroachment Screening Standard,* a vapor encroachment screening should be conducted to evaluate the potential for vapors from contaminated soils or groundwater within a set search radius that may impact the subject Property. The vapor encroachment screening is intended to identify a vapor encroachment condition (VEC), which may impact the Property resulting in a REC.

Environmental Standards utilized the EDR screening workbook and did not identify potential VECs (Appendix F).

5.3 Additional Environmental Record Sources

5.3.1. Delaware Department of Natural Resources and Environmental Control

Environmental Standards inquired about the existence of DNREC records relating to environmental releases at the subject Property by filing a records request application (Appendix F).

On January 31, 2022, S. Lee Sobocinski (DNREC FOIA Coordinator) contacted environmental standards stating that numerous files associated with the subject Property were identified and that a payment was required. On February 3, 2022, Environmental Standards provided DNREC officials with the required payment and were provided with 1,247 individual files pertaining to the subject Property. Upon review of the documents provided by DNREC, it was identified that the files in question were associated with the parcels to the north and east of the subject Property (The Cherry Island Landfill). The Cherry Island Landfill is regulated by DNREC. Accidents, violations, and updates to equipment that occurred on site were well documented and reported to DNREC officials.

Upon review of the documents provided by DNREC, it was determined that the majority of the documents provided were related to violations, reportable items, or permit modifications/renewals. The documents provided to Environmental Standards were organized into the following categories.

- Reportable Items – Reportable item documentation in the files was mostly related to damaged or malfunctioning equipment. Common reports included liner damage, liner leaks, on site fires, or explosions due to vented gases. After each occurrence, DNREC was notified, and an appropriate procedure was agreed upon to assess and repair damage. The reviewed reports of leachate leaks were monitored and appropriately addressed. The cause of most of the on-site fires and explosions were either unknown or started due to gas flair equipment failures. The on-site fires were monitored and appropriately addressed.
- Improper Waste Disposal – Improper waste included waste material that the landfill does not accept. Examples of improper waste identified at the landfill were unpackaged asbestos and regulated medical waste. When these materials were identified, a DNREC Enforcement Officer was notified and would arrive on site to confirm that the material was removed for proper disposal.
- Violations - Violations resulted from a lack of Cherry Island Landfill's compliance with DNREC permits. Adequate correction of violations was reported to DNREC. This mostly came in the form of updating daily operating procedures and wastewater management procedures. The violations were corrected in a timely manner, and it appeared that environmental impacts did not result from the instances reported.
- Permit Modification or Renewal – The Cherry Island Landfill has a Title V Operation Permit. When the permit is up for renewal or there is a request to modify the permit specifications, DNREC was notified, and the landfill engaged in back-and-forth correspondence about the details of the modification or renewal.

In addition to the documents summarized above, one document of particular interest identified was a quarterly groundwater report summarizing groundwater, surface water and leachate sampling activities and results at the Cherry Island Landfill. The document is further summarized below:

3rd Quarter 2018 Environmental Monitoring Report, Delaware Solid Waste Authority – Northern Solid Waste Management Center-2 at Cherry Island, DSWA Contract No. DSWA-S-16-755-NPNC (Permit Nos. SW-16/07), Brickhouse Environmental, Inc., November 12, 2018.

This report documents the environmental monitoring activities conducted at the Cherry Island Landfill by Brickhouse Environmental, Inc. (Brickhouse Environmental) during the 3rd quarter 2018. A copy of this report is provided in Appendix G.

- A depth-to-water (DTW) survey conducted during the sampling event gauged 22 monitoring wells located on site. DTW on site ranged from roughly 8 to 28 feet below grade. Groundwater elevations and contour mapping indicates that groundwater flows east to southeast toward the confluence of the Christina and Delaware rivers.
- Groundwater samples were collected at 22 monitoring wells during the event. The monitoring wells were installed at various depths to target four separate aquifers/groundwater groups: Columbia Aquifer, Potomac Aquifer, Recent Deposits, and Isolated Sand Lens.
- Four surface water locations were sampled during the monitoring event. Historically eight surface water locations are sampled, but during the 3rd quarter 2018, four locations were not discharging and could not be sampled. Surface water sample locations are depicted in the figures included in this report.
- Leachate samples were collected in accordance with the City of Wilmington (permit W-88-02) and CIL operating permit (DNREC Permit SW16/07). In total, five leachate samples were collected.
- Based on the monitoring data, Brickhouse Environmental developed the conclusion that the surface water and groundwater locations sampled during the event do not appear to have been impacted by landfill leachate. No further action or changes were recommended by Brickhouse Environmental following the issue of the monitoring report.

The Cherry Island Landfill is required by the Title V Permit (AQM-003/00111 – Renewal 3) to monitor air quality in relation to the landfill venting system in the form of submitting both semi-annual and annual reports. The reports included deviations from the operation permit, the location and construction of vents on the landfill, and monitoring results. Environmental Standards reviewed the provided semi-annual and annual monitoring reports (note: not all semi-annual or annual reports were provided to Environmental Standards). Information that would pose a significant environmental risk to the property was not observed during the review. A copy of the 2017 CIL Annual Report is provided in Appendix G.

5.3.2. United States Environmental Protection Agency

Environmental Standards utilized the US EPA's online Freedom of Information Act (FOIA) website (MyPropertyInfo). The database was searched for the subject Property address and the query returned "The entered address was found within the EPA Facility Registry System (FRS) list of address records. Multiple reports and facility names were returned. To gather more information Environmental Standards submitted a FOIA request with the EPA on January 10, 2022 (Appendix G). The records request was confirmed by Ms. Rita Tate (Government Information Specialist – EPA Region III) and a records search was initiated."

On January 27, 2022, Ms. Tate, responded to Environmental Standards' request for files by making available 25 files pertaining to the subject Property. Upon review of said files, it was observed that the files provided to Environmental Standards from US EPA were in reference to the

Cherry Island Landfill. These documents were in reference to the landfill's Air Quality Monitoring Permit, which is summarized in section 5.3.1.

5.3.3. City of Wilmington

A Right-to-Know request was submitted to multiple departments for the City of on January 10, 2022. Requests were submitted to the Department of Planning and Development, Department of Licenses and Inspections, and Department of Parks and Recreation. On January 11, 2022, Ms. Dorien Snyder of the department of Planning and Development responded to Environmental Standards' request and directed Environmental Standards to the DNREC website to obtain environmental records (see section 5.3.1).

5.3.4. Additional Resources

Environmental Standards reviewed documents associated with the subject Property that were provided by DSPC. These documents are summarized below and are included in Appendix G.

Wilmington Harbor North Confined Dredge Material Facility Phase I Site Assessment, US Army Corps of Engineers – Philadelphia District, July 22, 2016.

A 2016 Phase I ESA conducted by USACE commissioned EDRNET to provide a database review of the subject Property and surrounding properties to identify potential environmental concerns to the subject Property. The results of this investigation are brief but indicated that there were no environmental reasons that the facility cannot be transferred to the Delaware Solid Waste Authority.

5.4 Physical Setting Sources

5.4.1. Topography

According to the EDR Geocheck® Physical Setting Source Summary, the Site lies at an elevation of approximately 26 feet above mean sea level. The topography of the Property is generally flat, gently sloping toward the southwest.

5.4.2. Local Geology

Bedrock beneath the Property is part of the Windy Hill Gneiss Formation. The Windy Hill Gneiss Formation consists of thinly interlayered, fine- to medium-grained hornblende-plagioclase amphibolite, biotite gneiss, and felsic gneiss, most likely metavolcanic (Delaware Geological Survey).

5.4.3. Local Soils

According to the U.S. Department of Agriculture's (USDA's) Soil Conservation Service (SCS), soils in the vicinity of subject Property are classified as urban land with no unified soil type. The urban land complex is well drained due to the extremely gravelly soil.

5.4.4. Groundwater

Based on groundwater information from other local groundwater studies, Environmental Standards assumed that under natural, unconfined aquifer conditions, shallow groundwater

beneath the Site would reasonably be expected to flow Southeast to the regional surface water discharge point, the Delaware River. The 3rd quarter 2018 groundwater monitoring report for the Cherry Island Landfill notes depth to water was commonly recorded between 8 to 28 feet below grade.

5.4.5. Surface Water

In general, stormwater runoff on portions of the Property would be expected to flow south into the two surrounding bodies of water, the Christina River and Delaware River. The Christina River is located immediately adjacent to the entire southern border of the subject Property. The Delaware River is immediately adjacent to the easternmost portion of the subject Property.

5.4.6. Wetlands and Flood Information

According to the Detail Map presented in the EDR Radius Map Report (Appendix A), mapped wetlands are present along the southern, western, and eastern borders of the subject Property adjacent to the Christina and Delaware rivers. In addition, the southern border of the subject Property is mapped within the Special Flood Hazard Area (1%).

5.5 Historical Use Information about the Property

Known historical development of the Property dates to at least 1904 when the Property appeared to have been an underdeveloped marsh, as shown on a 1904 topographic map. The property has a long history of industrial and waste use.

As part of the historical use evaluation, a Historical Topographic Map Report (Appendix B) was obtained and reviewed. The historical topographic maps show roads, water bodies, topographic contours, railroads, and regions of development through time. Historical topographic maps of the subject Property were included in the EDR Report provided for this ESA. These maps provide representations of the Site and the vicinity for the years 1904, 1906, 1919, 1942, 1948/1951, 1967, 1993, 1995/1997, 2014, 2016, and 2019.

A review of the topographic maps is provided below:

1904/1906 Topographic Map:

Subject Property	The Site appears in an area with little development, mostly marsh land. One large structure, a light house, is depicted on the subject Property. Roads border the northwestern and northern portion of the Property and extend down the eastern portion of the Property.
Surrounding Properties	Surrounding areas are moderately developed including a large residential area northwest of the Property and commercial/industrial development south, across the Christina River.

1919 Topographic Map:

Subject Property	The Site appears to have become more land and less of a marsh. The southeastern portion of the Property has been extended into the Delaware River.
Surrounding Properties	No significant changes.

1942 Topographic Map:

Subject Property	The entire eastern portion of the subject Property has been extended into the Delaware River. Two buildings were present on the southern boundary along the Christina River.
Surrounding Properties	A building and a parking lot were developed adjacent to northern boundary. The residential area northwest of the subject Property was heavily developed. The commercial/industrial development south of the subject Property, across the river, has become moderately developed.

1948/1951 Topographic Map:

Subject Property	Dikes have been added within the subject Property as well as around the entire perimeter.
Surrounding Properties	The residential area northwest of the subject Property is now designated as a densely developed area as indicated by pink shading.

1967 Topographic Map:

Subject Property	All vegetation has been removed from southeastern portion of subject Property.
Surrounding Properties	Sewage disposal facilities have been developed north of the subject Property.

1993 Topographic Map:

Subject Property	Presence of dikes indicated by steep slopes are present. Two distinct cells have been created. One within Property boundaries (western cell), the other is adjacent to northern border (eastern cell). Multiple levees have been built along the borders of each cell.
Surrounding Properties	Increased residential development is present to the northeast and northwest. A major highway (I-495) has been constructed along the northwestern portion of the subject Property.

1995/1997 Topographic Map:

Subject Property	No significant changes.
Surrounding Properties	No significant changes.

2014 Topographic Map:

Subject Property	Maximum elevation of western cell is 60 feet.
Surrounding Properties	Maximum elevation of eastern cell is 115 feet

2016 Topographic Map:

Subject Property	Maximum elevation of western cell is 55 feet and is shown to be vegetated.
Surrounding Properties	No significant changes.

2019 Topographic Map:

Subject Property	No significant changes.
Surrounding Properties	No significant changes.

Historical aerial photograph coverage (Appendix C), was obtained and reviewed for the area in which the Site is located. Historical aerial photographs were included in the EDR Report provided for this ESA. These photographs provide representations of the Site and vicinity for the years 1940, 1954, 1965, 1970, 1974, 1982, 1991, 1991, 1997, 1998, 2006, 2010, 2013, and 2017.

A review of the photographs is provided below:

1940 Aerial Photograph:

Subject Property	The subject Property has a path extending down the eastern border until it reaches a lighthouse on the Property's southeastern corner.
Surrounding Properties	Roads are adjacent to the northwestern and northern boundary. There are also buildings and a parking lot adjacent to the northern border. The surrounding area, across the Christina River to the south, is moderately developed with buildings that appear to be a combination of commercial and industrial buildings. Marsh land surrounds the northern and eastern boundaries of the subject Property.

1954 Aerial Photographs:

Subject Property	Large amounts of soil have been imported, converting the marsh land along the eastern boundary into somewhat solid ground.
Surrounding Properties	Large amounts of soil have been imported, converting the marsh land adjacent to the northeastern boundary into somewhat solid ground. Surrounding properties are more developed with some additional structures to the south.

1965 Aerial Photographs:

Subject Property	No significant change.
Surrounding Properties	No significant change.

1970 Aerial Photographs:

Subject Property	Large amounts of soil have been imported converting the marsh land along the northern and eastern boundaries into solid ground. Soil has also been added to main section of Property.
Surrounding Properties	Buildings and a parking lot adjacent to northern border have been removed. Sewage treatment plant has been built to the north of the Property.

1974 Aerial Photographs:

Subject Property	Additional soil has been imported and truck paths have been established.
Surrounding Properties	A major highway (I-495) has been constructed along the northwestern portion of the subject Property.

1982 – 1997 Aerial Photograph:

Subject Property	Development of two separate cells within the landfills, west and east. Only the western cell is within target Property. Western cell is being used.
Surrounding Properties	Sewage disposal ponds have been installed along northern portion of the Property.

1998 Aerial Photograph:

Subject Property	Aerial photograph for 1998 is of insufficient quality to determine changes.
Surrounding Properties	Aerial photograph for 1998 is of insufficient quality to determine changes.

2006 and 2010 Aerial Photographs:

Subject Property	Vegetation is now present on the top of the western cell.
Surrounding Properties	Eastern cell shows signs of being utilized.

2013 Aerial Photographs:

Subject Property	Loss of vegetation on the top of western cell.
Surrounding Properties	Eastern cell is being utilized.

2017 Aerial Photographs:

Subject Property	Vegetation covers the entirety of the western cell.
Surrounding Properties	Portions of eastern cell are covered with vegetation.

As part of the historical use evaluation, Sanborn Fire Insurance Maps (Appendix D) were requested. Sanborn maps were not available for the property in the EDR Report provided for the Phase I ESA.

In the City Directory Abstract (Appendix E), business directories were reviewed at approximately 5-year intervals for years spanning 2000 through 2017.

Date	Source	Property Information

2000	EDR Digital Archive	George and Lynch

6.0 Site Reconnaissance

Environmental Standards representatives, Daniel Claycomb, P.G., and Joseph Kraycik, P.G., conducted a site reconnaissance visit of the subject Property on March 16, 2022. Mr. Daniel Kelly, P.E., and Mr. William (Skip) Harris of the USACE accompanied Environmental Standards during a tour of the subject Property. Mr. Kelly and Mr. Harris were interviewed at the start of the visit and were available to answer Environmental Standards' questions during the visit. The objective of Environmental Standards' site reconnaissance visit was to observe the Property visually and to physically collect information to help identify RECs in connection with the subject Property.

This section of the report discusses observations made during the reconnaissance visit regarding current uses of the Property that are likely to involve or could involve the use, treatment, storage, disposal, or generation of hazardous substances or petroleum products.

6.1 Methodology and Limiting Conditions

The site reconnaissance visit consisted of driving and walking *readily accessible* areas of the subject Property and recording visual and physical observations, including photographic documentation. Photographs and narratives of the Site and adjoining properties are presented in the attached Photograph Log.

6.2 Observations

The Property, which consists of five individual parcels, consists primarily of a disposal area that was previously used by the USACE for dredge material disposal. This area is densely vegetated. A gravel/dirt access road is present around the dredge material disposal area although the road on the western side was overgrown and impassable during the reconnaissance visit. The access road also continues to the east along the southern portion of the subject Property between the Christina River to the south and the DSWA property to the north. A Maintenance Dredge Plan was provided to Environmental Standards by Mr. Dan Kelly of USACE. This document is provided in Appendix G and presents features associated with the dredge material disposal facility.

There are no buildings present on the subject Property. A lighthouse is present to the south of the subject Property in the Christina River.

A sluice structure was observed on the north side of the containment berm that forms the southern end of the former dredge material disposal area. Mr. Kelly explained that the sluice structure served as a drainage feature during dredge material dewatering. Steel piping was observed to the south of the containment berm. Mr. Kelly stated that this piping was previously connected to the sluice structure but was disassembled because piping was needed for an off-site project.

Adjoining properties are primarily used for commercial or industrial purposes. The Cherry Island Landfill is located to the north and east of the subject Property. The Christina River borders the subject Property to the south with the Port of Wilmington on the opposite shoreline. Interstate 495 passes above the western portion of the subject Property.

6.2.1. Pits, Ponds, or Lagoons

The former dredge material disposal area consists of a large depression. Although standing water was not observed in this area during the reconnaissance visit, it is likely that ponding of water occurs as the result of precipitation events.

6.2.2. Railroad Lines or Spurs

Railroad ties were not observed on the subject Property.

6.2.3. Drains or Sumps

Stormwater drainage features are present at the subject Property.

6.2.4. Septic Systems

No evidence of a septic system was observed during the Site walk.

6.2.5. Drums or Storage Containers

Drums and storage containers were not observed on the subject Property.

6.2.6. Odors

No unusual odors were noticed during the Site reconnaissance.

6.2.7. Landfills or Dumping Activities

The subject Property has been used for dredge material disposal in the past. Landfilling or dumping activities were not observed on the subject Property during the Site visit. The Cherry Island Landfill is located adjacent to the subject Property.

6.2.8. Waste or Process Water Discharge

No waste or process water discharges were observed on or adjacent to the Property.

6.2.9. UST System and Piping

No UST systems or piping were observed during the Site visit.

6.2.10. AST System and Piping

No AST systems or piping was observed during the Site visit.

6.2.11. Hydraulic Lifts or Equipment

No hydraulic lifts or equipment were observed during the Site visit.

6.2.12. Wells

Groundwater monitoring wells and piezometers associated with the Cherry Island Landfill were observed in the southeastern portion of the subject Property.

6.2.13. Industrial/Manufacturing Activities

No industrial or manufacturing activities were observed during the Site reconnaissance.

6.2.14. Remedial Activities

There were no current remedial activities taking place at the subject Property during the reconnaissance visit.

6.2.15. Stained Soils or Pavement

Environmental Standards did not obesrve stained soils or pavements during the March 16, 2022 Site visit.

6.2.16. Burning Activities

Burning activities were not observed on or adjacent to the subject Property.

6.2.17. Leachate or Seeps

No leachate or seeps were observed on the subject Property.

6.2.18. Stressed Vegetation

There was no stressed vegetation observed on or immediately adjacent to the subject Property.

6.2.19. Chemical Spills or Releases

There was no evidence of spills or releases observed during the Site visit.

6.2.20. Surface Water Contamination

Environmental Standards did not observe surface water contamination at the subject Property.

6.2.21. Transformers

One pole-mounted transformer was observed. The transformer was mounted on a telephone pole located on the shoreline immediately to the north of the lighthouse.

7.0 Interviews

7.1 Interview with Key Site Manager

Mr. Kelly and Mr. Harris were interviewed as part of the Site Reconnaissance visit (Section 6). Information gathered from this interview has been included in this Phase I ESA report.

7.2 Interviews with Local Government Officials

To obtain reasonably ascertainable historical information about the environmental condition of the subject Property, Environmental Standards performed FOIA requests from local, county, state, and federal governmental agencies. Responses to these requests are summarized in Section 5.3 of this report.

7.3 Interviews with User

ASTM E1527-21 defines the "User" of this Phase I ESA as the party seeking to use it to complete an environmental site assessment of the subject Property. A User may be a potential purchaser of the Property, a potential tenant of the Property, an owner of the Property, a lender, or a Property Manager. The User has specific obligations for completing a successful application of E1527-21. To qualify for the Landowner Liability Protections offered by the Business Liability Relief and Brownfields Revitalization Act of 2001, the User must provide certain and complete information to the EP conducting the Phase I ESA. Failure to provide this information (if available) could result in a determination that "all appropriate inquiry" is not complete.

As part of this Phase I ESA, Environmental Standards posed a series of questions to Mr. Eugene Bailey, Executive Director, DSPC, regarding environmental conditions at the Property. Mr. Bailey is a User of this Phase I ESA. In accordance with ASTM E1527-21, the following questions were posed to the User to satisfy one of the requirements of the Landowner Liability Protections. Mr. Bailey's response follows each question in bold:

(1.) Environmental liens that are filed or recorded against the *Property* (40 CFR 312.25).

Did a search of land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the subject Property under federal, tribal, state, or local law?

NOTE 1 — in certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases, judicial records must be searched for environmental liens and AULs.

Response: The "Wilmington Harbor North" parcels to be acquired by DSPC are comprised of four tax parcels. These tax parcels are: TP # 26-059.00-02; TP# 26-059.00-001; TP# 26-064.00-001 and TP# 26-065.00-002. DSPC obtained title searches for all of the parcels from First American Title Insurance Company dated as of December 20, 2021 (collectively, the "Title Searches"). To the best of DSPC's knowledge after review of the Title Searches, there are no environmental liens recorded against Wilmington Harbor North.

(2.) Activity and use limitations that are in place on the *Property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and (vi)).

Did a search of land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject Property and/or have been filed or recorded against the subject Property under federal, tribal, state, or local law?

Response: Based on the Title Searches, DSPC notes the following:

There is a Declaration of Delaware Solid Waste that the property has been and will be used for solid waste disposal and lands are restricted under the Delaware Department of Natural Resources and Environmental Controls regulations governing solid waste. This is recorded at Book 1866 Page 262 and includes in the listing of tax parcel number, TP# 26-059.00-001, which is part of Wilmington Harbor North.

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Response: DSPC has owned the Port of Wilmington since 1995. DSPC operated the Port until 2018. DSPC owns a portion of Wilmington Harbor South and has owned a portion of a dredge material placement site but contracted out dredging operations for the Port of Wilmington.

(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this subject Property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject Property?

Response: The transfer of this property is directed by an Act of Congress pursuant to the Water Resources Development Act of 2020 and the purchase price must reasonably reflect the fair market value.

(5.) Commonly known or *reasonably ascertainable* information about the *Property* (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the subject Property that would help the EP to identify conditions indicative of releases or threatened releases? For example,

(a.) Do you know the past uses of the subject Property?

Response: DSPC is aware that this property was owned by the Army Corps of Engineers and operated as a dredge materials placement site. A portion of the property was previously owned by the Delaware Solid Waste Authority and the property is adjacent to Cherry Island, a Delaware landfill.

(b.) Do you know of specific chemicals that are present or once were present at the subject Property?

Response: DSPC has no personal knowledge of the specific chemicals that are present or once were present at the property but anticipates that the constituents of the prior dredge materials would be on the property.

One recorded document, Easement and License Agreement between Frederic A. Potts & Co. and Getty Refining and Marketing Co dated March 30, 1982 and recorded at Volume C122 Page 193 (relating to TP# 26-059-00-002) references the prior disposal of petroleum coke.

(c.) Do you know of spills or other chemical releases that have taken place at the subject Property?

Response: DSPC has no knowledge of any spills or other chemical releases that have taken place at Wilmington Harbor North.

(d.) Do you know of any environmental cleanups that have taken place at the subject Property?

Response: Not to DSPC's knowledge.

(e.) Do you know any other relevant environmental information about the subject Property?

Response: DSPC is still evaluating the property but at this time we have no additional environmental information about the property.

(6.) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

Based on your knowledge and experience related to the subject Property are there any obvious indicators that point to the presence or likely presence of releases at the subject Property?

Response: As noted above, Wilmington Harbor North is presently and was historically used as a dredge spoil site so if the dredge materials contained contamination, we would anticipate the presence of that contamination to continue to be located on the property. We are not aware that any of the historical dredge materials were contaminated.

8.0 Data Gaps

According to the US EPA AAI Regulation, a “data gap’’ is a lack of, or inability to obtain, information required by the standards and practices listed in the AAI Regulation, despite good faith efforts by the EP or the prospective landowner to gather such information pursuant to the objectives for all appropriate inquiries. A “significant data gap” is a data gap that affects the ability of the EP to identify a REC.

The AAI Final Rule requires EPs, prospective landowners, and grant recipients to identify data gaps that affect their ability to identify conditions indicative of releases or threatened releases of hazardous substances. The Final Rule requires such persons to identify the sources of information consulted to address the data gaps and comment upon the significance of the data gaps with regard to the ability to identify conditions indicative of releases or threatened releases. The AAI Final Rule also requires that the inquiries report include comments regarding the significance of data gaps relative to the EP’s ability to provide an opinion as to whether the inquiries have identified conditions indicative of releases or threatened releases.

A significant data gap would restrict Environmental Standards’ ability to form an opinion regarding the release, threat of a release, or potential for a release to have occurred at the subject Property. The following significant data gap was identified during the Phase I ESA process:

- The Salvage Yard Relocation Area II, which according to the EDR report was located at the intersection of 12th Street and Route 495, was listed in the US BROWNFIELDS and DE SHWS databases. These databases did not include detailed information on the historical environmental conditions present at this site. Due to the proximity of this site and the database records associated with the site, Environmental Standards requested additional environmental documents from the US EPA and DNREC. Both regulatory bodies responded to Environmental Standards’ request, stating that files did not exist for the property. This lack of information about the potential for this property to impact the subject Property constitutes a significant data gap.

9.0 Findings and Opinions

Environmental Standards developed the following findings and opinions because of the environmental assessment process and as defined in E1527-21, this section identifies known or suspect RECs, cRECs, hRECs, and *de minimis* conditions and Environmental Standards' opinions regarding these findings.

Known historical development of the subject Property dates to at least 1914 when dredged material disposal began (U.S. Army Corps of Engineers [USACE], 2016). Previously, the subject Property consisted of undeveloped marshlands as shown on the 1904 and 1906 topographic maps. The subject Property is not currently being used for active dredge material placement.

Environmental Standards identified one REC in connection with the subject Property. Environmental Standards also identified one significant data gap in connection with a nearby property.

The use of the subject Property for dredged material disposal represents a REC. The dredge material disposed of at the subject Property was sourced from the adjacent rivers and as such, environmental impacts to the material are possible.

The Cherry Island Landfill, located adjacent to the subject Property to the north and east, is an active, permitted municipal waste landfill. This facility has been in continuous operation since at least the 1970s. A 2018 environmental report, prepared by Brickhouse Environmental, indicated that the landfill has a routine groundwater and leachate monitoring program in place. Based on groundwater monitoring conducted by Brickhouse Environmental at the landfill and adjacent parcels, groundwater has not been impacted by leachate emanating from the landfill. Therefore, the Cherry Island Landfill is unlikely to present an environmental risk to the subject Property at this time. In addition, the most recent Cherry Island Landfill monitoring report indicated that groundwater downgradient of the subject Property is not impacted. Therefore, it appears that there are no impacts to groundwater flowing off the subject Property.

The EDR database records identified numerous nearby properties in various environmental databases. With the exception of the Salvage Yard Relocation Area II, located at the intersection of 12th Street and Route 495, these properties were able to be ruled out as environmental concerns to the subject Property. The Salvage Yard was included in the US BROWNFIELDS and DE SHWS databases, indicating that the property has undergone environmental investigations utilizing US EPA Brownfield funds. Environmental Standards was unable to determine the current status or gather additional information related to this property through due diligence and file requests with environmental agencies. Therefore, this property is considered a significant data gap.

10.0 Conclusions

Environmental Standards has performed a Phase I ESA in general conformance with the scope and limitations of ASTM Standard E1527-21 of the subject Property. Exceptions to or deletions from this practice are described in Section 11.0 of this report. Based on the records review and the site reconnaissance, Environmental Standards identified one REC in connection with the subject Property and one significant data gap in connection with a nearby property. Details regarding the REC and the significant data gap are provided in the Data Gaps and Findings and Opinions Sections of this Report (Sections 8.0 and 9.0).

11.0 Deviations

There were no deviations from the ASTM Phase I ESA Standard in the ESA process.

12.0 Additional Services

Environmental Standards performed no additional services as part of this Phase I ESA.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

EXECUTIVE SUMMARY

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 08/23/2021 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Description:	Not reported
Nature:	Records reviewed during 7/21/10 inspection show that the H2S pretreatment system (LO-CAT) has not been operated in conjunction with 2 enclosed flares for the quantity of time specified in its permit, since the unit was permitted in 2008. ---- Both John Zink Low-NOx enclosed flares, designated as ZULE-A and ZULE-B, shall be operated with the LO-CAT II H2S pretreatment system at all times as practicable. The term all times practicable is based on 20 of the total operational downtime recommended by the applicant. As practicable, the required maintenance on H2S pretreatment system shall be done while collected landfill gases are not diverted to the Low-NOx enclosed flares. The entire flare system shall be operated in conjunction with the gas collection system to control odors as its top priority. ---- Both John Zink Low-NOx enclosed flares, designated as ZULE-A (?Zink-A?) and ZULE-B (?Zink-B?), shall be operated with the LO-CAT II H2S pretreatment system at all times as practicable. The term all times practicable is based on 20 of the total operational downtime recommended by the applicant. As practicable, the required maintenance on H2S pretreatment system shall be done while collected landfill gases are not diverted to the Low-NOx enclosed flares. The entire flare system shall be operated in conjunction with the gas collection system to control odors as its top priority.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
STATE MASTER
AIR MAJOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Summary Details:

Conditions at proposal September 18, 1985): Halby Chemical Co. was a manufacturing facility in New Castle, New Castle County, Delaware. Its primary product was ammonium thiocyanate. In the early 1970s, Witco Chemical Co. acquired the operation, then sold it to Brandywine Chemical Co. in 1977. Currently, Brandywine stores finished products for distribution on the site. From the late l940s to August l977, a waste water lagoon was in use behind the plant near the WilmingtonMarine Terminal in New Castle. The lagoon was approximately 2 feet deep, covered l.5 acres, and drained into the Lobdell Canal and the Christina River. High levels of various organic and inorganic substances, including trichloroethylene,tetrachloroethylene, arsenic, cyanide, and lead, are present in water and sediment samples from the lagoon, according to EPA tests. EPA detected thiocyanate in the ground water underlying the site. Four municipal wells are part of an interconnected system that supplies approximately 150,000 people living 2 to 3 miles from the site. Status June 10, 1986): EPA emergency staff has assessed the site and determined that an immediate removal action is not warranted at this time.

Deed Restriction Date:	02/05/1999
Restrictions:	NOW, THEREFORE, IT IS AGREED BY DAWM AND DWR AS FOLLOWS: 1. A GMZ shall be established to include Halby, Potts, Port and their Environs as defined both in the text and on the attached maps, Attachment 5 and Attachment 6. The GMZ will consist of two distinct areas with differing restrictions on wells. The GMZ A consists of the aerial extent of Halby and Potts. The GMZ B consists of the Environs impacted by Halby, Potts, and Port (both in the Columbia and Upper Potomac Aquifers) regardless of ownership and is physically bounded to the west by Route 9, the northwest by the Conrail Bridge crossing the Christina River, to the north by the Christina River, to the east at the Delaware River, and to the south by Interstate 295 and the Delaware Memorial Bridge. 2. No public or domestic water supply wells, will be allowed or permitted in GMZ A . Other types of wells

CITY OF WILM. MARINE TERMINAL (Continued) **S104304169**

may be approved following joint review and approval of both DWR and DAWM. 3. No public or domestic, water supply wells will be allowed or permitted in GMZ B in the unconfined Columbia Aquifer or the Upper Potomac Aquifer. Other water supply wells may be allowed and permitted in GMZ B provided that the construction of the wells will prevent transport of contaminants into the deeper aquifers. Water supply wells will be allowed and permitted in GMZ B in the deeper confined Lower Potomac Aquifer provided that the construction will prevent transport of contaminants down into the deeper aquifers. 4. Permits for any wells in either GMZ A or GMZ B may be issued by DWR following joint review and approval by both DWR and DAWM. This MOA may be modified or terminated only upon the agreement of both parties. Any modifications must be made in writing and signed by the Director of DAWM and the Director of DWR. A copy of this MOA will be placed within the Administrative Record for the Site.

Name: SPILL LOCATION
Address: 1050 CHRISTIANA AVE
City,State,Zip: WILMINGTON, DE 19801
Facility ID: 4377
Release ID: 15997
Release Date: 06/25/2018
Hazardous: NO
Report Date: 06/25/2018
Release Location: 1050 CHRISTIANA AVEWILMINGTON, DE 19801
Substance Release: GASOLINE
Release Duration: Continuous
Est Quantity: Equal To 57.00 GALLONS
Release To: GROUND;
Health Risk: GASOLINEThe following chemical information was taken from the CAMEO Chemical database.Irritation of mucous membranes and stimulation followed by depression of central nervous system. Breathing of vapor may also cause dizziness, headache, and incoordination or, in more severe cases, anesthesia, coma, and respiratory arrest. If liquid enters lungs, it will cause severe irritation, coughing, gagging, pulmonary edema, and, later, signs of bronchopneumonia and pneumonitis. Swallowing may cause irregular heartbeat. (USCG, 1999)
Medical Attention: GASOLINEThe following chemical information was taken from the CAMEO Chemical database.Eye: If this chemical contacts the eyes, immediately wash the eyes with large amounts of water, occasionally lifting the lower and upper lids. Get medical attention immediately. Contact lenses should not be worn when working with this chemical. Skin: If this chemical contacts the skin, immediately flush the contaminated skin with soap and water. If this chemical penetrates the clothing, immediately remove the clothing and flush the skin with water. If irritation persists after washing, get medical attention. Breathing: If a person breathes large amounts of this chemical, move the exposed person to fresh air at once. If breathing has stopped, perform mouth-to-mouth resuscitation. Keep the affected person warm and at rest. Get medical attention as soon as possible. Swallow: If this chemical has been swallowed, get medical attention immediately. (NIOSH, 1997)
Prerecomm: None
Pub Notified: NO

Hazardous Waste Summary:

BUCKEYE TERMINALS, LLC - PORT WILMINGTON TERMINAL (Continued) **1000440331**

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D005
Waste Description: BARIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D018
Waste Description: BENZENE

Waste Code: D019
Waste Description: CARBON TETRACHLORIDE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D034
Waste Description: HEXACHLOROETHANE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

BUCKEYE TERMINALS, LLC - PORT WILMINGTON TERMINAL (Continued) **1000440331**

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: K049
Waste Description: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K051
Waste Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K052
Waste Description: TANK BOTTOMS (LEADED) FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K071
Waste Description: BRINE PURIFICATION MUDS FROM THE MERCURY CELL PROCESS IN CHLORINE PRODUCTION, IN WHICH SEPARATELY PREPURIFIED BRINE IS NOT USED.

Waste Code: K106
Waste Description: WASTEWATER TREATMENT SLUDGE FROM THE MERCURY CELL PROCESS IN CHLORINE PRODUCTION.

Waste Code: P110
Waste Description: PLUMBANE, TETRAETHYL- (OR) TETRAETHYL LEAD

Waste Code: U044
Waste Description: CHLOROFORM (OR) METHANE, TRICHLORO-

Waste Code: U165
Waste Description: NAPHTHALENE

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with

FORBES STEEL AND WIRE CORPORATION (Continued) **1015733142**

a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Release Date:	11/10/2014
Hazardous:	NO
Report Date:	11/10/2014
Release Location:	1 HAUSEL RD.WILMINGTON, DE 19801
Substance Release:	FUEL OIL, [DIESEL]
Release Duration:	Continuous
Est Quantity:	Equal To 50.00 GALLONS
Release To:	GROUND;
Health Risk:	FUEL OIL, [DIESEL]The following chemical information was taken from the CAMEO Chemical database.LIQUID: Irritating to skin and eyes. Harmful if swallowed. (USCG, 1999)
Medical Attention:	FUEL OIL, [DIESEL]The following chemical information was taken from the CAMEO Chemical database.EYES: First check the victim for contact lenses and remove if present. Flush victim s eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim s eyes without specific instructions from a physician. IMMEDIATELY transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop.SKIN: IMMEDIATELY flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, IMMEDIATELY call a physician and be prepared to transport the victim to a hospital for treatment.INHALATION: IMMEDIATELY leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, Self-Contained Breathing Apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing.INGESTION: DO NOT INDUCE VOMITING. If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and IMMEDIATELY call a hospital or poison control

PORT OF WILMINGTON (Continued) **S109093874**

center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim s airway is open and lay the victim on his/her side with the head lower than the body. DO NOT INDUCE VOMITING. IMMEDIATELY transport the victim to a hospital. (NTP, 1992)

the victim for contact lenses and remove if present. Flush victim s eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim s eyes without specific instructions from a physician. IMMEDIATELY transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop.SKIN: IMMEDIATELY flood affected skin with water while removing and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, IMMEDIATELY call a physician and be prepared to transport the victim to a hospital for treatment.INHALATION: IMMEDIATELY leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, Self-Contained Breathing Apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing.INGESTION: DO NOT INDUCE VOMITING. If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and IMMEDIATELY call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim s airway is open and lay the victim on his/her side with the head lower than the body. DO NOT INDUCE VOMITING. IMMEDIATELY transport the victim to a hospital. (NTP, 1992)

Report Title: Deed Restriction Sites
Site Type: VCP
Deed Restriction Date: 08/05/2002
Restrictions: 1. Use Restriction. Use of the Land shall be restricted solely to those non-residential type uses permitted within Commercial, Manufacturing, or Industrial Districts, respectively, as such zoning district types and uses (including, without limitation, ancillary or accessory uses) are described and permitted, respectively, pursuant to the Code in effect as of the date of this Declaration. 2. Interference with Remedy. There shall be no digging, drilling, excavating, grading, constructing, earth moving, or any other land disturbing activities on the Land without the prior written approval of DNREC-SIRB. 3. Limitation of Groundwater Withdrawal. No groundwater wells shall be installed, and no groundwater shall be withdrawn from any well, on the Land without the prior written approval of DNREC-SIRB. 4. Amendment. The foregoing covenants shall not be modified, amended or altered in whole or in part except with the express written and properly recorded approval of DNREC-SIRB, or its successor, which shall be the only approval or consent required. 5. Violation of Covenants. If Declarant violates any of the restrictive covenants imposed by this Declaration, DNREC-SIRB, or its duly appointed successor, shall have the right to proceed at law or in equity to enforce compliance with or prevent the violation or breach of the terms hereof. 6. Scope and Interpretations. This Declaration shall be governed by Delaware law, shall have no application to or effect upon any property other than the Land as described in Exhibit "A", and shall not be interpreted to benefit any party other than DNREC-SIRB or its duly appointed successor. No rights hereunder may be assigned by DNREC-SIRB except by operation of law to its duly appointed successor.

Report Title:	Deed Restriction Sites
Site Type:	State Funded Brownfield
Deed Restriction Date:	03/31/2003

Restrictions: 1. Limitation of Groundwater Withdrawal. No groundwater wells shall be installed, and no groundwater shall be withdrawn from any well, on the Land without the prior written approval of DNREC-SIRB. 2. Amendment. The foregoing covenants shall not be modified, amended or altered in whole or in part except with the express written and properly recorded approval of DNREC-SIRB, or its successor, which shall be the only approval or consent required. 3. Violation of Covenants. If Declarant violates any of the restrictive covenants imposed by this Declaration, DNREC-SIRB, or its duly appointed successor, shall have the right to proceed at law or in equity to enforce compliance with or prevent the violation or breach of the terms hereof. 4. Scope and Interpretations. This Declaration shall be governed by Delaware law, shall have no application to or effect upon any property other than the Land as described in Exhibit "A", and shall not be interpreted to benefit any party other than DNREC-SIRB, or its duly appointed successor. No rights hereunder may be assigned by DNREC-SIRB except by operation of law to its duly appointed successor.

Property History:	A total of 2.69 acres were acquired by the U.S. Government between 1913 and 1945. 2.50 acres were fee while 0.19 acre was under easement. Fee Tract A (2.5 acres total) was purchased from various parties in 1913 and 1923. Tract B (0.19 acre total) was acquired by easement in 1952. Tracts A and B were transferred from Civil Accounts to Military Accounts effective 11 November 1952 for use by the National Guard. All property was reported excess to General Services Administration on 18 October 1961. Both tracts were conveyed to the mayor and council of Wilmington by Quitclaim Deed dated 1 November 1962. The site was later purchased by Frederick Krapf by deed dated 14 August 1978.

Report Title: Deed Restriction Sites
Site Type: HSCA
Deed Restriction Date: 05/04/2005
Restrictions: 1. Use Restriction. Use of the Land shall be restricted solely to those non-residential type uses (any mixed use involving both non-residential and residential uses being specifically excluded) permitted, whether by right, variance or other Board of Adjustment approval, within Commercial, Manufacturing & Industrial or Waterfront Districts, respectively, as such district types and uses (including, without limitation, ancillary or accessory uses) are described and permitted, respectively, pursuant to the Wilmington City Code in effect on the date of the intended use. 2. Interference with Remedy. There shall be no digging, drilling, excavating, grading, constructing, earth moving, or any other land disturbing activities on the Land without the prior written approval of DNREC-SIRB or its legal successor. 3. Limitation of Groundwater Withdrawal. No groundwater wells shall be installed, and no groundwater shall be withdrawn from any well, on the Land without the prior written approval of DNREC-SIRB or its legal successor. The Land is located in the City of Wilmington Groundwater Management Zone. 4. Amendment. The foregoing covenants shall not be modified, amended or altered in whole or in part except with the express written and properly recorded approval of DNREC-SIRB, or its legal successor, which shall be the only approval or consent required. 5. Violation of Covenants. If Declarant violates any of the restrictive covenants imposed by this Declaration, DNREC-SIRB, or its legal successor, shall have the right to proceed at law or in equity to enforce compliance with or prevent the violation or breach of the terms hereof. 6. Scope and Interpretations. This Declaration shall be governed by Delaware law, shall have no application to or effect upon any property other 'than the Land as described in Exhibit "A", and shall not be interpreted to benefit any party other than DNREC-SIRB or its legal successor. No rights hereunder may be assigned by DNREC-SIRB except by operation of law to its legal successor.

Hazardous: NO
Report Date: 05/02/2002
Release Location: US 495 S/O PHILADELPHIA PIKE CLAYMONTBETWEEN THE EAST EDGE OF 495 AND THE AMTRAK RAIL** RESULTING FROM A TRAFFIC ACCIDENT NOT INVOLVING ANY TRAIN
Substance Release: FUEL OIL, [DIESEL]
Release Duration: At Least 60 minutes
Est Quantity: Equal to 100.00 GALLONS
Release To: GROUND;
Health Risk: FUEL OIL, [DIESEL]The following chemical information was taken from the CAMEO Chemical database.LIQUID: Irritating to skin and eyes. Harmful if swallowed. (USCG, 1999)
Medical Attention: FUEL OIL, [DIESEL]The following chemical information was taken from the CAMEO Chemical database.EYES: First check the victim for contact lenses and remove if present. Flush victim s eyes with water or normal saline solution for 20 to 30 minutes while simultaneously calling a hospital or poison control center. Do not put any ointments, oils, or medication in the victim s eyes without specific instructions from a physician. IMMEDIATELY transport the victim after flushing eyes to a hospital even if no symptoms (such as redness or irritation) develop.SKIN: IMMEDIATELY flood affected skin with water while removing

AMTRAK WILMINGTON MAINTENANCE FACILITY (Continued) **S106673379**

and isolating all contaminated clothing. Gently wash all affected skin areas thoroughly with soap and water. If symptoms such as redness or irritation develop, IMMEDIATELY call a physician and be prepared to transport the victim to a hospital for treatment.INHALATION: IMMEDIATELY leave the contaminated area; take deep breaths of fresh air. If symptoms (such as wheezing, coughing, shortness of breath, or burning in the mouth, throat, or chest) develop, call a physician and be prepared to transport the victim to a hospital. Provide proper respiratory protection to rescuers entering an unknown atmosphere. Whenever possible, Self-Contained Breathing Apparatus (SCBA) should be used; if not available, use a level of protection greater than or equal to that advised under Protective Clothing.INGESTION: DO NOT INDUCE VOMITING. If the victim is conscious and not convulsing, give 1 or 2 glasses of water to dilute the chemical and IMMEDIATELY call a hospital or poison control center. Be prepared to transport the victim to a hospital if advised by a physician. If the victim is convulsing or unconscious, do not give anything by mouth, ensure that the victim s airway is open and lay the victim on his/her side with the head lower than the body. DO NOT INDUCE VOMITING. IMMEDIATELY transport the victim to a hospital. (NTP, 1992)

Facility Contact Tele: 302-462-5978
Facility Contact Email: Not reported
Status: Final
Additional Info: Mr Beam from Amtrak called to report there was a spill of diesel fuel from a Tile Laying Machine (TLM) at a maintenance shop for the company (Amtrak). Mr Beam related the machine was partially outside the shop because of the size of it and there was a broken valve which was the reason for the spill. Mr Beam related there was over 50 gallons spilled into a trough just outside the shop. Mr Beam related an outfall and storm drain in the area were checked for any free standing product which revealed nothing in these two areas.

Name: AMTRAK WILMINGTON FACILITY
Address: 4001 VANDEVER AVENUE
City,State,Zip: WILMINGTON, DE 19801
Facility ID: 10000007
Release ID: 12367
Release Date: 11/15/2006
Hazardous: NO
Report Date: 11/15/2006
Release Location: BRANDYWINE CREEK @ AMTRAK RAILROAD BRIDGE
Substance Release: PETROLEUM DISTILLATES, N.O.S.
Release Duration: At Least 1 minutes
Est Quantity: Less than 1.00 GALLON
Release To: WATER;
Health Risk: PETROLEUM DISTILLATES, N.O.S.The following chemical information was taken from the CAMEO Chemical database.Inhalation or contact with material may irritate or burn skin and eyes. Fire may produce irritating, corrosive and/or toxic gases. Vapors may cause dizziness or suffocation. Runoff from fire control or dilution water may cause pollution. (DOT, 1996)
Medical Attention: PETROLEUM DISTILLATES, N.O.S.The following chemical information was taken from the CAMEO Chemical database.Move victim to fresh air. Call emergency medical care. Apply artificial respiration if victim is not breathing. Administer oxygen if breathing is difficult. Remove and isolate contaminated clothing and shoes. In case of contact with substance, immediately flush skin or eyes with running water for at least 20 minutes. Wash skin with soap and water. Keep victim warm and quiet. Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves. (DOT, 1996)

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/20/2021

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Program Sites

When a property is contaminated with hazardous substances there are liabilities associated with the cleanup of the site under Federal and State Superfund laws, regardless of who caused the contamination and when it was caused. Because of this liability, old industrial sites (with contamination) located close to well developed infrastructure do not attract developers or buyers. These individuals prefer to purchase pristine property without contamination known as "greenfield." Under the Voluntary Cleanup Program (VCP) developers and buyers performing the cleanup of contaminated properties would be provided the much needed protection from potential liabilities for past contamination. Thus, they can proceed with the purchase or development of the property with the assurance that they will not be held liable for environmental problems that were a result of past practices at the site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Data Release Frequency: No Update Planned

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

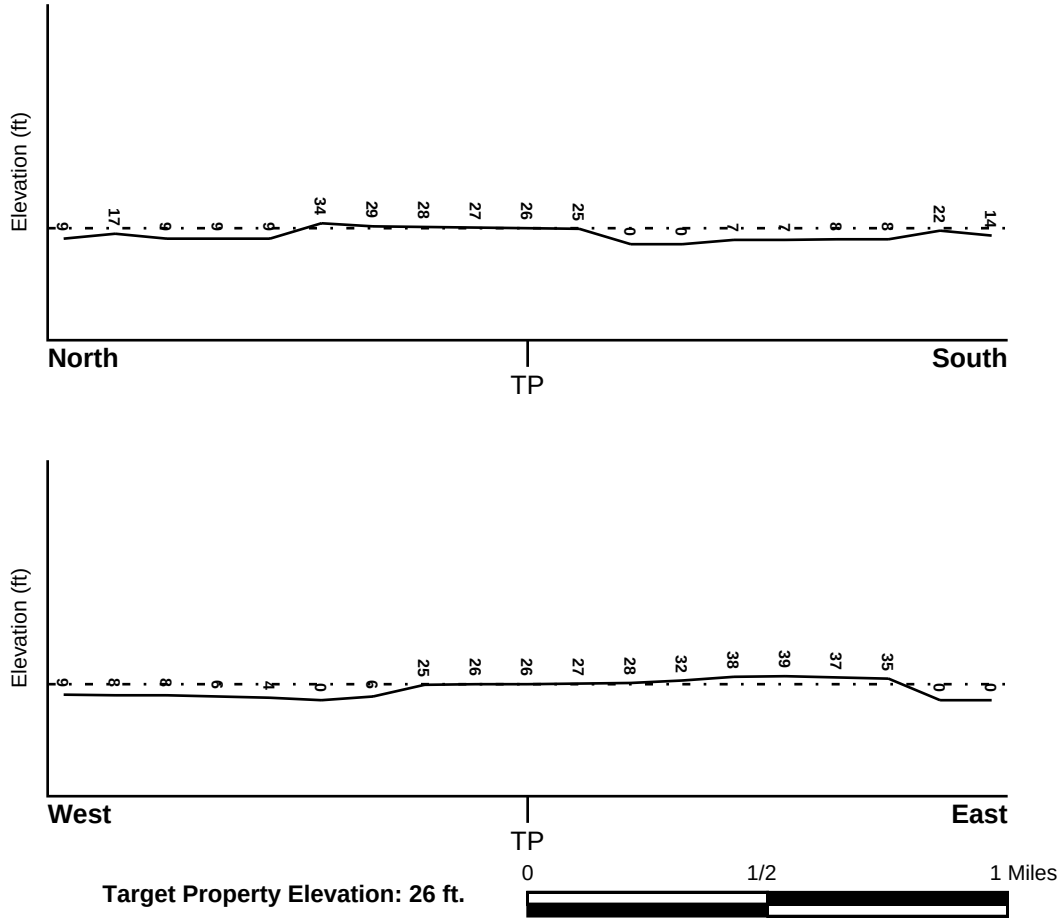
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

WILMINGTON SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile WSW
Site Name:	Halby Chemical Co
Site EPA ID Number:	DED980830954
Groundwater Flow Direction:	NOT AVAILABLE.
Inferred Depth to Water:	approximately 5 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifer(s) underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Mesozoic
System:	Cretaceous
Series:	Lower Cretaceous
Code:	lK *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: extremely gravelly - coarse sand
silt loam
loam

Surficial Soil Types: extremely gravelly - coarse sand
silt loam
loam

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: extremely gravelly - sand
sand
stratified
clay loam
loam
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.
