USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Statewide Wetlands Mapping Project
Source: Dept. of Natural Resources & Environmental Conservation
Telephone: 302-739-4691

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Environmental Standards Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Environmental Standards Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Summary Details:

Conditions at proposal September 18, 1985): Halby Chemical Co. was a manufacturing facility in New Castle, New Castle County, Delaware. Its primary product was ammonium thiocyanate. In the early 1970s, Witco Chemical Co. acquired the operation, then sold it to Brandywine Chemical Co. in 1977. Currently, Brandywine stores finished products for distribution on the site. From the late l940s to August l977, a waste water lagoon was in use behind the plant near the WilmingtonMarine Terminal in New Castle. The lagoon was approximately 2 feet deep, covered l.5 acres, and drained into the Lobdell Canal and the Christina River. High levels of various organic and inorganic substances, including trichloroethylene,tetrachloroethylene, arsenic, cyanide, and lead, are present in water and sediment samples from the lagoon, according to EPA tests. EPA detected thiocyanate in the ground water underlying the site. Four municipal wells are part of an interconnected system that supplies approximately 150,000 people living 2 to 3 miles from the site. Status June 10, 1986): EPA emergency staff has assessed the site and determined that an immediate removal action is not warranted at this time.

CHERRY ISLAND RENEWABLE ENERGY, LLC, 1706 EAST 12TH STREET, WILMINGTON, DE 19809 (Continued)

Description:	Not Reported
Nature:	Records reviewed during 7/21/10 inspection show that the H2S pretreatment system (LO-CAT) has not been operated in conjunction with 2 enclosed flares for the quantity of time specified in its permit, since the unit was permitted in 2008. ---- Both John Zink Low-NOx enclosed flares, designated as ZULE-A and ZULE-B, shall be operated with the LO-CAT II H2S pretreatment system at all times as practicable. The term all times practicable is based on 20 of the total operational downtime recommended by the applicant. As practicable, the required maintenance on H2S pretreatment system shall be done while collected landfill gases are not diverted to the Low-NOx enclosed flares. The entire flare system shall be operated in conjunction with the gas collection system to control odors as its top priority. ---- Both John Zink Low-NOx enclosed flares, designated as ZULE-A (?Zink-A?) and ZULE-B (?Zink-B?), shall be operated with the LO-CAT II H2S pretreatment system at all times as practicable. The term all times practicable is based on 20 of the total operational downtime recommended by the applicant. As practicable, the required maintenance on H2S pretreatment system shall be done while collected landfill gases are not diverted to the Low-NOx enclosed flares. The entire flare system shall be operated in conjunction with the gas collection system to control odors as its top priority.

Environmental Interest/Information System:

DSWA CHERRY ISLAND LANDFILL (NSWMC), 1706 EAST 12TH STREET, WILMINGTON, DE 19809 (Continued)

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

STATE MASTER

AIR MAJOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DNREC Public Records

Record request #22-58 has been closed. The closure reason supplied was:

Dear Mr. Firor,

This email is in response to your Freedom of Information Act (FOIA) request. You requested:

Environmental Standards is conducting a Phase I ESA at the property "SALVAGE YARD RELOCATION AREA II" at the listed address "INTERSECTION OF 12TH STREET AND RTE 495, Wilmington, DE 19802" and is requesting any environmental records associated with the site.

A records search by the Division of Waste and Hazardous Substances, the Division of Air Quality, and the Division of

Community Affairs (ECU) returned no records responsive to your inquiry.

Thank you for your FOIA inquiry. DNREC considers your request closed at this time.

Preview Request

The Freedom of Information Act (FOIA) is a federal law that gives the public the right to make requests for federal agency records. Agencies may withhold information according to nine exemptions contained in the statute. The FOIA applies only to federal agencies. It does not apply to records held by Congress, the courts, or by state or local government agencies. Each state has its own public access laws that should be consulted for access to state and local records.

Re: Freedom of Information Act (FOIA) Request EPA-R3-2022-001954 – Final Response

Dear Mr. Firor:

This letter concerns the above-referenced FOIA request, received by the U.S. Environmental Protection Agency (EPA or Agency) on January 17, 2022, in which you requested information regarding the Salvage Yard Relocation Area II property located at 12th Street & Route 495 in Wilmington, Delaware. Please be advised that no records were found responsive to your request.

This letter concludes our response to your request. You may appeal this determination by email at hq.foia@epa.gov, or by mail to the EPA's National FOIA Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2310A), Washington, DC 20460 or through FOIAonline if you are an account holder. If you are submitting your appeal by hand delivery, courier service, or overnight delivery, you must address your correspondence to 1200 Pennsylvania Avenue, N.W., WJC-N Building, Room 7309C, Washington, DC 20460.

Your appeal must be in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90-calendar-day limit. Appeals received after 5:00 p.m. EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal."

If you need any further assistance or would like to discuss any aspect of your request, you may seek assistance from EPA's FOIA Public Liaison at hq.foia@epa.gov or call 202-566-1667. You may also seek assistance from the Office of Government Information Services (OGIS). You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, 8601 Adelphi Road, College Park, Maryland 20740-6001; email: ogis@nara.gov; telephone: 202-741-5770 or 877-684-6448; or fax: 202-741-5769. For all media inquiries, please contact press@epa.gov.

If you have any questions, please do not hesitate to contact Ms. Donna Bostic, FOIA Project Manager, at 215-814-2608 or bostic.donna@epa.gov.

Sincerely,

Michael D'Andrea
Chief, FOIA Branch

2. Records Requested

Be as specific as you can, describing types of records, dates, party(ies) to correspondence, subject matter, etc. The City of Wilmington ("City") will make every reasonable effort to assist you in identifying the records being sought. Requests for voluminous records may be delayed.

Environmental Standards is conducting a Phase I ESA at the property 1706 East 12th Street, Wilmington, DE 19801 and is requesting any environmental records (records that may pertain to spills, releases, permits, etc.) associated with this site.

3. There may be costs involved in responding to your request. Specifically, copies are $.10 per page (the first 20 pages of standard-sized, black and white copies are provided free of charge). Payment shall be in cash, by money order, business check or certified check made payable to the City of Wilmington. (Identification may be requested.) You may be required to examine the records at City offices.

Please contact me if costs will be greater than $ 0

Within 15 *business days* from receipt of your request, the City will: provide you with access to the records, deny your request, or state that additional time is needed.

NOTICE: Under Delaware's Freedom of Information Act, 29 Del. C. §§10001-10006 [delcode.delaware.gov] ("FOIA"), a FOIA request or petition, along with any information contained therein or any documents attached thereto, submitted to any "public body" subject to FOIA, including, without limitation, any board, bureau, commission, department, agency or committee of the State, may itself be deemed a "public record" subject to disclosure under FOIA.

DNREC Public Records

Your first DNREC record request (request number #22-43) has been submitted. It is currently unpublished and is not available for the general public to view.

Thank you for your FOIA inquiry to DNREC.

In accordance with Delaware's FOIA statute, within 15 business days you will receive a further response from DNREC substantively responding to your FOIA request or otherwise responding consistent with Delaware's FOIA statute.

You will receive additional communication as we process your request.

The Freedom of Information Act (FOIA) is a federal law that gives the public the right to make requests for federal agency records. Agencies may withhold information according to nine exemptions contained in the statute. The FOIA applies only to federal agencies. It does not apply to records held by Congress, the courts, or by state or local government agencies. Each state has its own public access laws that should be consulted for access to state and local records.

A. Brad Richardson
Environmental Scientist III
Division of Waste and Hazardous Substances
Delaware Department of Natural Resources and Environmental Control
89 Kings Highway
Dover, DE 19901

Dear Mr. Richardson:

RE: September 2017 CIL Quarterly Monitoring Report/Environmental Database Update

The Delaware Solid Waste Authority (DSWA) hereby submits two (2) copies of the September 2017 Quarterly Environmental Monitoring Report for the Northern Solid Waste Management Center at Cherry Island (CIL) on DVD. In an attempt to streamline the electronic transfer of data and information in your department, the information on the DVD has been arranged in three (3) sections. Section I contains the third party contractors report, which includes a copy of this letter. Section II contains general information about the site as well as the monitoring program, and will not change unless there is an update to the CIL Monitoring Plan or Permit SW-16/07. Section III contains a copy of DSWA's updated environmental monitoring database. The following directory tree serves as a Table of Contents for the DVD, and has been provided for your convenience:

1128 S. Bradford Street, Dover, Delaware 19904
Phone: (302) 739-5361 Fax: (302) 739-4287
CITIZENS' RESPONSE LINE: 1-800-404-7080 www.dswa.com

Printed on Recycled Paper

All files contained on this DVD are provided in Microsoft Excel format (XLS) or Adobe Portable Document Format (PDF), and include all historical environmental monitoring for Section III, Subparts A through E as required by SW-16/07. Please note that the names of the folders and subfolders have been significantly reduced in length to eliminate file string over-runs when uploading the information to your server. It is highly recommended that you either archive or delete previous versions of the database on your server due to this change.

As required under Section IV.D.1.a of DNREC Permit SW-16/07, DSWA is reporting that with the following updates have been made to the CIL surface water files.

- In October 2015 the United States Geological Service (USGS) converted the staff gauge datum for Site 01480120 to NAVD88 datum. DSWA uses the NGVD29 datum at CIL, and was unaware that this change had taken place. DSWA has adjusted all surface water and river elevation files after October 2015 by +1.12 feet as recommended by the USGS.

Other than this, no changes have been made to the historical environmental database since the last permit submittal. DSWA also confirms that the quarterly subsurface gas migration and building inspections were completed, and that no methane was detected above the action level at any location. Copies of the inspection forms can be found under Section III.5 on the DVD. The following should be noted with regards to the September 2017 CIL monitoring event and report:

- Quarterly surface water samples could not collected from SW-1, SW-6, DI-4 and DI-5 due to lack of water at the monitoring locations during the September 2018 monitoring event.

Based on DSWA's and 3rd party evaluation, the CIL has not impacted the groundwaters below the site, or surfacewater bodies to which the facility discharges. In addition, other than the information discussed above, we find no immediate concerns of note regarding the environmental monitoring at CIL.

This fulfills the environmental monitoring requirements for the CIL September 2017 data submittal as stipulated under Permit SW-16/07. Please contact me immediately should you have any questions regarding this information.

With best regards,

Daniel A. Fluman, M.ES, BCES
Senior Manager of Environmental
Monitoring and Testing

Licensed Professional Geologist

Douglas B. Schott, P.G.
Project Manager

This report documents the environmental monitoring activities conducted by Brickhouse Environmental during July, August, and September 2018 at the Delaware Solid Waste Authority's (DSWA) Cherry Island Landfill (Northern Solid Waste Management Center-2) in Wilmington, Delaware (the Site). All leachate, surface water, and groundwater monitoring activities were conducted consistent with the "Monitoring Program for the Northern Solid Waste Management Center at Cherry Island" [Revision 1 – October 10, 2012 (Modification 2 – December 10, 2014)]. A Site location map is included as Figure 1. The following monitoring was conducted during July, August, and September 2018 by the DSWA and Brickhouse Environmental:

- July 2018 monthly monitoring of leachate (mixed event)
- July 2018 monthly monitoring of leachate (unmixed event)
- July 2018 quarterly monitoring by the DSWA for landfill gas migration
- August 2018 monthly monitoring of leachate (unmixed event)
- September 2018 quarterly monitoring of groundwaters
- September 2018 quarterly sounding of well casings
- September 2018 quarterly monitoring of surface waters
- September 2018 quarterly monitoring of leachate (mixed event)
- September 2018 quarterly monitoring of leachate (unmixed event)

Leachate samples were collected from the Cherry Island-Main Pump Station (CI-MPS) during the July, August, and September monitoring events. The location of the CI-MPS monitoring point is shown on Figure 2. The July monthly mixed and unmixed leachate monitoring events occurred on July 2 and 3 and July 16 and 17, respectively. The August monthly unmixed leachate monitoring event occurred on August 6 and 7, 2018. The September monthly mixed and unmixed leachate monitoring events occurred on September 4 and 5 and September 17 and 18, respectively.

On September 4-5, 2018, Brickhouse Environmental measured depth to water, sounded all well casings, and collected groundwater samples from the following twenty-two (22) groundwater monitoring wells (Figure 4) at the Site:

- Well UC-100
- Well LC-100
- Well LC-101B
- Well UC-102B
- Well LC-102A
- Well LC-104A
- Well LC-105A
- Well UC-106
- Well UC-108A
- Well LC-114A
- Well LC-115B
- Well LC-116
- Well P-100A
- Well P-101B
- Well P-102B
- Well P-104B
- Well P-105C
- Well P-106
- Well P-108B
- Well P-116
- Well P-201
- Well P-202

Brickhouse Environmental was scheduled to collect surface water samples from the following locations on September 5, 2018, as part of the quarterly monitoring event. However, at the time of the monitoring event, SW-1 and SW-6 were not discharging and did not contain a sufficient quantity of water to collect representative samples. Drop Inlet 4 (DI-4) and Drop Inlet 5 (DI-5) were inspected on September 18, 2018 for absence/presence of flow. Neither drop inlet was discharging at the time of inspection. Future quarterly monitoring events will include monitoring of DI-4 and DI-5 in the event they're flowing at the time of the quarterly monitoring event. The semi-annual stormwater monitoring event

was conducted on September 28, 2018. The resulting monitoring data will be reported in the December 2018 quarterly monitoring report. A map of the surface water monitoring points is shown on Figure 5.

- Delaware River Upstream (Low Tide)
- Delaware River Downstream (Low Tide)
- Northern SMB (SW-1)*
- Christina River (SW-5)
- 12th Street (SW-6)*
- Phase V Sedimentation Basin (LP-8)
- Drop Inlet 4 (DI-4)*
- Drop Inlet 5 (DI-5)*

* These locations were not discharging at the time of inspection during the monitoring event.

On July 13, 2018, the DSWA conducted the quarterly landfill gas migration monitoring and quarterly landfill gas building inspection. The landfill gas migration monitoring is performed on five (5) gas probes, located north of Phase I and Phase II. The quarterly landfill gas building inspection includes fifty-four (54) monitoring locations, within thirteen (13) onsite buildings. The locations of the gas probes and building interior monitoring locations are shown on Figure 6.

This report documents the results of sample collection and analysis for this monitoring event and includes the following:

- A description of the Site;
- A discussion of Site geology;
- A discussion of Site hydrogeology;
- A detailed description of leachate sampling protocols and the scope of work completed as part of the July and August 2018 monthly leachate monitoring and September 2018 quarterly leachate monitoring;
- A discussion of the monthly perimeter leachate seep inspections;
- A discussion of the quarterly landfill gas migration and inspection monitoring conducted by the DSWA;
- A detailed description of groundwater and surface water monitoring protocols, and the scope of work completed as part of the September 2018 quarterly surface water and groundwater monitoring;
- A discussion of analytical results, including a summary of any inconsistencies identified during the sampling and data evaluation process; and
- Conclusions based on a review of the current and historic data.

All tables and figures are included immediately following the text of this report. Field data sheets are included as Attachment 1 and certified laboratory reports of analysis are included as Attachment 2.

SITE BACKGROUND

The Site is located within the Coastal Plain physiographic province, and is underlain directly by Delaware River dredge spoils atop overbank deposits of Recent (Holocene) age. Beneath the Recent Deposits, the gravels, sands, and silts of the Columbia Formation (Pleistocene) are present. The Columbia Formation rests unconformably on the Potomac Formation, which generally consists of finer sediments of Cretaceous age. The bedrock below the Site is presumed to be crystalline metamorphic and igneous rocks of the Wilmington Complex (Early Paleozoic).

DSWA has classified the groundwater monitoring wells into four groups based upon the screened intervals of the wells, and named for the "aquifer" the well is believed to monitor. These four groups are designated as: the Columbia Aquifer; Potomac Aquifer; Recent Deposits; and the Isolated Sand Lens groups. The following table presents the monitoring wells and the aquifer zones that each well monitors.

Aquifer Zone	Monitoring Wells
Columbia Aquifer	LC-101B, LC-102A, LC-104A, LC-105C, LC-114A, LC-115B, LC-116, and LC-100
Potomac Aquifer	P-100A, P-101B, P-102B, P-104B, P-105C, P-106, P-108B, P-116, P-201, and P-202
Recent Deposits*	UC-100
Isolated Sand Lens*	UC-102B, UC-106, and UC-108A

* Despite Columbia Aquifer naming designation, these wells are suspected of being screened within distinct minor hydrologic units above the Columbia Aquifer, and have not been used to develop groundwater contours.

SITE HYDROGEOLOGY

Depth-to-water measurements were taken at the Site on September 4, 2018. These were used to prepare the groundwater flow direction maps attached to this report and all discussions of groundwater flow. Depth to water and groundwater elevations are summarized in Table 1. The groundwater surface contours for the Columbia Aquifer are shown on Figure 7. Piezometric surface contours for the Potomac Aquifer are shown on Figure 8.

As shown in Figure 7, the overall direction of groundwater flow in the Columbia Aquifer is to the east and southeast, toward the Delaware River and its confluence with the Christina River. The highest groundwater elevation was measured in the northwestern portion of the facility, at LC-116. The lowest groundwater elevation was measured across the north-eastern part of the facility, at LC-102A. The interpreted horizontal gradient estimated for the Columbia Aquifer was gradual during this monitoring event, with an average gradient ranging from approximately 0.0004 to 0.001 ft/ft.

As shown in Figure 8, the overall direction of groundwater flow in the Potomac Aquifer is also to the southeast, toward the confluence of the Christina and Delaware Rivers.

The highest groundwater elevation was measured in the northeast portion of the facility, at P-100A. The lowest groundwater elevation was measured at the southwestern portion of the facility, near the confluence of the Delaware and Christina Rivers, at P-202. The interpreted horizontal gradient estimated for the Potomac Aquifer was also gradual, ranging from approximately 0.0001 to 0.002 ft/ft.

Vertical groundwater gradients were calculated between the Upper and Lower Columbia, the Upper Columbia and Potomac, and the Lower Columbia and Potomac. The vertical gradient between the Upper and Lower Columbia Aquifers was downward at three (3) of the four (4) well clusters (the 100, 102, and UC-106/LC-114 clusters), and slightly upward at cluster UC-108A/LC-115B. Therefore, the Site-wide vertical gradient between the Upper Columbia and the Lower Columbia is generally downward. Two (2) of four (4) well clusters used to calculate vertical gradients between the Upper Columbia and Potomac Aquifers (the 100 and 106 clusters) exhibited a downward vertical gradient, while the other two (2) well clusters (the 102 and 108 clusters) exhibited an upward vertical gradient between the Upper Columbia and the Potomac Aquifers. Eight (8) well clusters were used to calculate vertical gradients between the Lower Columbia and Potomac Aquifers. Six (6) of the well clusters exhibited a downward gradient (100, 101, 104, LC-114A/P-106, LC-115B/P-108B, and 116 clusters), while the remaining two (2) clusters (102 and 105 clusters) exhibited a slight upward gradient. Overall, the Site-wide vertical gradient between the Lower Columbia and Potomac Aquifers was downward. It should be noted that river channel dredging by the United States Corps of Engineers has breached the uppermost confining layer of the Columbia Aquifer. Therefore, both groundwater quality, groundwater elevation, and vertical gradients may be impacted by the stage of the river at the time of the monitoring event.

GROUNDWATER AND SURFACE WATER MONITORING PROTOCOLS

Brickhouse Environmental collected groundwater and surface water samples from the locations listed above as part of the September 2018 quarterly monitoring event. The monitoring point locations for groundwater and surface water are shown on Figures 4 and 5, respectively. The groundwater and surface water samples were collected consistent with the "Monitoring Program for the Northern Solid Waste Management Center at Cherry Island" (Modification 2 – December 10, 2014).

On September 4, 2018, Brickhouse Environmental measured the depth to water in all groundwater monitoring wells onsite. All depth-to-water measurements were taken on the same day, prior to initiating monitoring activities. This was done so that purging of the wells would not affect groundwater elevation data. Once all depth to water measurements had been taken across the Site, Brickhouse Environmental completed the collection of groundwater samples. Monitoring well total depths were measured following the collection of groundwater samples on September 4 and 5, 2018.

The monitoring wells were purged and sampled on September 4 and 5, 2018. Purging was performed at a flow rate of less than 1 liter per minute, using a decontaminated peristaltic pump at all monitoring well locations. The pump was connected to a dedicated

3/16-inch Teflon™ tube perforated within the screened interval of the well casing and purged. Field measurements were continually monitored from the start of purging until measured values had stabilized (+/-10%). Field sampling sheets, documenting the initial and final field measurement results, are included as Attachment 1.

Grab surface water samples were collected directly from their respective monitoring stations on September 5, 2018, as part of the quarterly monitoring event. During the September 2018 monitoring event, the surface water locations Northern SMB (SW-1), 12th Street (SW-6), Drop Inlet 4 (DI-4) and Drop Inlet 5 (DI-5) were either dry or not discharging. Field measurements were obtained prior to sample collection. Field sampling sheets, documenting field measurement results, are included as Attachment 1.

Groundwater and surface water samples were placed directly into laboratory supplied/preserved bottleware and the containers were tightly sealed. After each sample was collected, it was placed immediately in an insulated cooler with ice to maintain an approximate temperature of 4° Celsius. As each sample was collected, it was documented on a Chain of Custody (COC) form that was kept with the samples. Completed COC forms are included with Attachment 2. The samples were transported to Eurofins Lancaster Laboratories Environmental (ELLE) within twelve (12) hours of sample collection.

During the course of the September 2018 quarterly groundwater and surface water monitoring event, seven (7) QA/QC samples were collected and submitted to ELLE, including:

- One duplicate sample. The duplicate sample was collected as a volume-for-volume split. This sample was analyzed to evaluate the precision of laboratory analysis.
- Laboratory prepared trip blanks. Trip blanks accompanied the sample bottles in the field. These samples were analyzed to determine if contamination was introduced during bottle preparation, sample handling, or analytical procedures.
- Equipment blank samples. Equipment blanks were prepared by pumping laboratory supplied deionized water through a decontaminated sampling apparatus. The samples were analyzed to determine the effectiveness of the decontamination process.

GROUNDWATER SAMPLE ANALYTICAL RESULTS

Field data sheets for the September 2018 quarterly groundwater monitoring event are included as Attachment 1. Certified laboratory reports on the results of analysis are included as Attachment 2. Results of the groundwater field sample analysis are summarized in attached Table 1. Results of the laboratory analysis are summarized in attached Table 2. Groundwater monitoring locations are presented on Figure 4. Analytical results representing new minimum and maximum concentrations are detailed below. Additional discussion of concentration trends is presented in the Summary and Conclusions section.

Monitoring Location	Measurement or Analyte	Units	Historic Min	Historic Max	Current Average	September 2018 Results	Comment
UC-100	Groundwater Elevation	Feet NGVD	-7.50	5.58	3.45	5.71	Maximum
LC-116	Groundwater Elevation	Feet NGVD	-0.93	4.08	2.40	4.08	Maximum
LC-104A	Specific Conductance (Field)	umhos/cm	1,165	3,500	2,098	940	Minimum
P-100A	Specific Conductance (Field)	umhos/cm	674	1,653	1,078	1,816	Maximum
P-106	Temperature	°C	8.0	21.1	15.2	23.2	Maximum
P-108B	Specific Conductance (Field)	umhos/cm	794	3,430	1,673	669	Minimum
	Specific Conductance (Lab)	umhos/cm	1,080	2,510	1,584	721	Minimum
P-202	Groundwater Elevation	Feet NGVD	-3.35	0.78	-0.83	0.83	Maximum
	Temperature	°C	11.1	18.0	14.97	18.4	Maximum

All other data was within historic ranges. Averages are calculated using all data obtained through the current reporting period.

The total monitoring well depths, measured on September 4 and 5, 2018, were generally consistent with known construction depths. Indications or evidence suggesting inner casing failures were not observed. Additional discussion of concentration trends is presented in the Summary and Conclusions section.

SURFACE WATER ANALYTICAL RESULTS

Field data sheets for the September 2018 quarterly surface water monitoring events are included in Attachment 1. Certified laboratory reports on the results of analysis are included as Attachment 2. Results of the quarterly surface water field sample analyses are summarized in Table 3. Laboratory analytical results are summarized in Table 4 for surface water. Surface water monitoring locations are presented in Figures 3. Analytical results representing new minimum and maximum concentrations for surface water, are summarized below.

September 2018 Quarterly Surface Water							
Monitoring Location	**Analyte**	**Units**	**Historic Min**	**Historic Max**	**Current Average**	**September 2018 Results**	**Comment**

All other data was within historic ranges. Averages are calculated using all data obtained through the current reporting period. SW-1, SW-6, DI-4 and DI-5locations were dry or not discharging during the September 2018 quarterly surface water monitoring event.

Brickhouse Environmental conducted the September quarterly (low tide) and (high tide) surface water monitoring event on September 5, 2018. For this monitoring event, surface water elevation data was obtained from the USGS stream gauge located on the Delaware River, 1,000 feet below the confluence with the Christina River near Wilmington, Delaware. Data collected by the USGS stream gauge indicated that the elevation of the Delaware River ranged from 3.47 to 2.99 feet NGVD, during the time that the high-tide samples were being collected (8:45 a.m. through 9:05 a.m.) and -0.76 to 0.08 feet NGVD, during the time that the low-tide samples were being collected (2:50 p.m. through 3:15 p.m.).

On September 5, 2018, the elevation of the Delaware River ranged from -1.24 feet NGVD at 2:18 p.m., to 5.58 feet at 8:06 p.m. An electronic copy of the elevation data collected on September 5, 2018 is included with the environmental monitoring database accompanying this report submission.

LEACHATE MONITORING PERMIT REQUIREMENTS

Per the City of Wilmington's (COW) permit W-88-02 (Rev. 9, dated February 28, 2016) and the CIL operating permit (DNREC Permit SW-16/07), the CIL leachate was sampled five (5) times from the CI-MPS during the quarterly monitoring period: Twice in July and September 2018 (non-trucking [unmixed] and trucking [mixed]) and once in August 2018 (non-trucking [unmixed]).

Permit W-88-02 (Rev. 9) requires a minimum of fourteen (14) days to pass between the first and second monitoring events for the months that require two monitoring events (trucking and non-trucking). The leachates sampled during trucking (mixed) monitoring events are comprised of mixed leachates from CIL, CSWMC, and the SSWMC. Permit SW-16/07 requires one monitoring event per month, comprised of CIL leachate only. With the exception of cyanide and volatile organic compounds (VOCs), all samples collected during these events are twenty-four (24)-hour composite samples collected from the CI-MPS. It should be noted that the CI-MPS receives wastewater from all sewage systems at CIL, in addition to leachate generated by the landfill. Also, CIL receives leachate shipments from DSWA's Central and Southern Solid Waste Management Centers (CSWMC and SSWMC). Leachate received from these Sites is off-loaded by way of a discharge port into the main vault of the CI-MPS. The CI-MPS discharges these wastewaters and leachates to COW's wastewater treatment plant by way of one of the New Castle County force mains, located 10 feet west of the western CIL boundary.

LEACHATE MONITORING PROTOCOLS

At the start and end of each 24-hour composite sample period, flow meters in the CI-MPS are read and the values recorded. The flow meters provide total flows and instantaneous flow rates of wastewater leaving the CI-MPS.

During the July, August, and September 2018 leachate monitoring events, Brickhouse Environmental collected leachate samples from the CI-MPS using the inline sample ports installed in the wastewater discharge line from the Site to the City of Wilmington (Figure 2). With the exception of samples collected for cyanide and VOC analysis, all samples were collected as twenty-four (24)-hour composites using an ISCO™ 3700 automatic sampler. The ISCO™ automatic sampler is outfitted with a 2.5-gallon glass jar for bulk composite collection. Ice is placed around the sample jar within the ISCO™ sampler at the time of setup, to assist in sample preservation. The sampler is programmed to collect a specified volume of leachate each hour. The sampler then shuts down after collecting the twenty-four (24) hourly samples. Samples are later decanted from the bulk composite jar into laboratory supplied/preserved bottleware. The inline sample port is also used to collect grab samples for cyanide analysis, VOC analysis and field temperature. Samples for VOC analysis consisted of four grab samples collected over an 8-hour period on September 17, 2018. The VOC samples were then composited by the laboratory prior to analysis. The sample collected for cyanide analysis was collected as a grab sample following the collection of the 24-hour composite sample on September 18, 2018. After collection, samples are immediately placed in an insulated cooler with ice to maintain an approximate temperature of 4° Celsius. At the

time of sample collection, pertinent information was documented on a COC form that was kept with the samples. The samples were transported to ELLE within twelve (12) hours of sample collection. Completed COC forms are included as part of Attachment 2.

Following the collection of leachate samples, the field crew retains a portion of the twenty-four (24)-hour composite sample to take field measurements of the temperature, pH, specific conductance, and oxidation-reduction potential. This temperature measurement is not used for compliance purposes, as it represents the temperature of the chilled sample, not the raw leachate leaving the CI-MPS. Any remaining leachate is returned to the leachate collection system of the CI-MPS, following field measurements. The field sampling data sheets documenting these measurements are included as Attachment 1.

During each of the leachate monitoring events, two (2) QA/QC samples were collected and submitted to ELLE for analysis, including the following:

- A laboratory prepared trip blank. The trip blank accompanied the leachate sample bottles from preparation at the laboratory through the sampling process in the field. This sample was analyzed to evaluate if contamination was introduced during bottle preparation, sample handling, or analytical procedures.

- An equipment blank sample. The equipment blank was prepared by pumping laboratory supplied deionized water through the same decontaminated sampling apparatus used during the collection of actual leachate samples. This sample was analyzed to evaluate the effectiveness of the decontamination process.

QA/QC samples were analyzed for the same list of analytes sampled from the CI-MPS.

LEACHATE ANALYTICAL RESULTS

Field data sheets for the July, August, and September 2018 monitoring events are included as Attachment 1. Laboratory analytical results are included as Attachment 2. Results of the leachate field measurements are summarized in Table 5. Laboratory analytical results are summarized in Tables 6-10. The leachate monitoring location is shown on Figure 2. No new historic minimum or maximum concentrations were established during the July 2018 and August 2018 mixed and unmixed leachate monitoring events. Analytical results representing new minimum and maximum concentrations for September mixed and unmixed leachate, are summarized below.

Monitoring Location	Measurement or Analyte	Units	Historic Min	Historic Max	Current Average	September 2018 Results	Comment
September Mixed	1,2-Dichloroethane	ug/L	<0.50	<5	NA	<10	Maximum
	2,4-Dimethylphenol	ug/L	<0.50	2	NA	<4	Maximum
	1,2-Dichloroethane	ug/L	<0.50	<5	NA	<10	Maximum
	gamma-BHC	ug/L	<0.0016	<0.0080	NA	<0.0083	Maximum

Monitoring Location	Measurement or Analyte	Units	Historic Min	Historic Max	Current Average	September 2018 Results	Comment
September Mixed	delta-BHC	ug/L	<0.0028	0.012	NA	<0.014	Maximum
	p,p-DDT	ug/L	<0.0042	0.014	NA	<0.021	Maximum

	Endrin	ug/L	<0.0067	0.0072	NA	<0.033	Maximum
September Unmixed	Poly. Hyd. Phosphorus	mg/L	<0.10	11.5	NA	<0.050	Minimum
	1,2-Dichloroethane	ug/L	<0.50	<10	NA	<20	Maximum
	Dicamba	ug/L	<0.080	<1.6	NA	<0.078	Minimum

QA/QC ANALYTICAL RESULTS

During the course of the July and August monthly monitoring events, and the September 2018 quarterly monitoring event, seventeen (17) QA/QC samples were collected, including one (1) duplicate, eight (8) trip blanks, and eight (8) equipment blanks. Field data sheets for the quarterly monitoring period are included as Attachment 1. Certified laboratory reports on analytical results are included as Attachment 2. Results from the laboratory analysis of the QA/QC are summarized in Tables 2, 4, and 6 through 10. All QA/QC samples are analyzed for the most extensive list of analytes that pertain to their associated sample groups. Analytical results are discussed on a point-by-point basis, below.

ELLE was instructed to report the limits of quantitation (LOQs) and method detection limits (MDLs) for each analyte. Several analytes were reported above their respective MDLs, but below their respective LOQs, at estimated concentrations in several of the trip and equipment blanks analyzed during the July, August, and September 2018 monitoring events. These estimated concentrations are significantly lower than the reportable detection limits (RDLs) and LOQs typically reported using these analytical methods. Therefore, these estimated concentrations are not considered significant, and are not discussed in the following QA/QC summary.

- July Mixed Leachate QA/QC (7/2/2018 – 7/3/2018): All reported data were below their respective LOQs. This indicates that contamination does not appear to have been introduced during sample collection, bottle preparation, sample handling, or analytical procedures.

- July Unmixed Leachate QA/QC (7/16/2018 – 7/17/2018): All reported data were below their respective LOQs, with the exception of dissolved silica (0.76 mg/L) in the equipment blank. The presence of dissolved silica in the equipment blank sample indicates that trace contamination was introduced during bottle preparation, sample collection, sample handling, analytical procedures, or was present in the laboratory supplied deionized water used to prepare the equipment blank. Since dissolved silica is present in the sampled leachate at significantly higher concentrations, this detection in the equipment blank sample is considered insignificant.

- August Unmixed Leachate QA/QC (8/6/2018 – 8/7/2018): All reported data were below their respective LOQs, with the exception of potassium (1.48 mg/L) and zinc (0.0604 mg/L) in the trip blank. The presence of potassium and zinc in the trip blank sample indicates that trace contamination was introduced during bottle preparation, analytical procedures, or was present in the laboratory supplied deionized water used to prepare the trip blank. Since potassium is present in the sampled leachate at significantly higher concentrations, the detection of potassium in the trip blank sample is considered insignificant. The trace detection of zinc in the trip blank does not appear to have had a material impact on the analytical results for zinc reported for the leachate sample given that zinc was detected at a trace concentration consistent with historic data.

- September Mixed Leachate QA/QC (9/4/2018 – 9/5/2018): All reported data were below their respective LOQs, with the exception of 2-Butanone (10 ug/L) in the equipment blank and several SVOCs in the trip blank.

  The presence of 2-Butanone in the equipment blank sample indicates that trace contamination was introduced during bottle preparation, sample collection, sample handling, analytical procedures, or was present in the laboratory supplied deionized water used to prepare the equipment blank. Since 2-Butanone is present in the sampled leachate at concentrations consistent with historic data for a mixed leachate monitoring event, it does not appear that this detection in the equipment blank has had a material impact on the results.

  Four (4) SVOCs were detected in the trip blank at concentrations exceeding their respective LOQs. Of these, only one compound (2-methylphenol) was detected in the associated leachate sample at a similar concentration. Similarly, none of the SVOCs detected in the trip blank were detected in the equipment blank. Given the unexpected detections of SVOCs in the trip blank, Brickhouse Environmental requested that ELLE reevaluate these detections. ELLE reanalyzed the original extract and verified that the extract was sourced from the correct sample set and bottle. The reanalysis confirmed the original results and the sample source was verified. It is Brickhouse Environmental's opinion that SVOC contamination was introduced to the trip blank during sample preparation, analytical procedures or was present in the deionized water used to create the trip blank. Given that SVOC analyses of the mixed leachate sample were consistent with prior results, it does not appear that the SVOC contamination in the trip blank has had a significant impact on the SVOC analysis of the mixed CI-MPS sample.

- September Unmixed Leachate QA/QC (9/17/2018 – 9/18/2018): All reported data were below their respective LOQs, with the exception of total phosphorous (0.13 mg/L) and methylene chloride (2 ug/L) in the equipment blank. The presence of total phosphorous and methylene chloride in the equipment blank sample indicates that trace contamination was introduced during bottle preparation, sample collection, sample handling, analytical procedures, or was present in the laboratory supplied deionized water used to prepare the equipment blank. Since total phosphorous is

present in the sampled leachate at significantly higher concentrations, this detection in the equipment blank sample is considered insignificant. Consistent with recent analytical results, methylene chloride was not detected in the CI-MPS leachate sample. Therefore, the trace detection of methylene chloride in the equipment blank does not appear to have had a material impact on the CI-MPS analytical results.

- September Groundwater QA/QC (9/4/2018 – 9/5/2018): All reported data were below their respective LOQs. This indicates that contamination does not appear to have been introduced during sample collection, bottle preparation, sample handling, or analytical procedures.

- September Surface Water QA/QC (9/5/2018): All reported data were below their respective LOQs, with the exception of total organic carbon (1.4 mg/L) in the trip blank. The presence of total organic carbon in the trip blank sample indicates that trace contamination was introduced during bottle preparation, sample collection, sample handling, analytical procedures, or was present in the laboratory supplied deionized water used to prepare the trip blank. The TOC concentrations reported for all surface water samples collected during the monitoring event were consistent with historic concentrations. Based on the consistency with historic data it does not appear that the TOC detection in the trip blank has had a material impact on the analytical results.

- Field Duplicate of LC-115B (Dup) (9/5/2018): This sample was a duplicate of groundwater sample LC-115B. As shown on Table 2, the laboratory reproducibility was good for all analytes.

LANDFILL SEEP AND DAMAGE INSPECTIONS

As part of the July and August 2018 monthly leachate monitoring events and the September 2018 quarterly leachate, groundwater, and surface water monitoring events, the perimeter of the landfill was inspected by Brickhouse Environmental for damage or seeps. The inspections were conducted on the following dates: July 3, 2018, August 6, 2018, and September 17, 2018. No irregularities were noted during any of these inspections.

LANDFILL GAS MIGRATION MONITORING

DSWA conducted the July 2018 quarterly subsurface landfill gas migration monitoring event on July 13, 2018. Methane was not detected in the headspace of any of the five (5) perimeter gas probes installed north and west of Phase I and Phase II. Figure 6 shows the locations of all landfill gas migration monitoring points. Completed forms for the perimeter landfill gas migration monitoring can be found in Attachment 1.

DSWA conducted the July 2018 quarterly facility building inspection for landfill gas on July 13, 2018. Methane was not detected at any of the fifty-four (54) monitoring locations, within the thirteen (13) onsite buildings. Figure 6 shows the locations of the

interior building landfill gas monitoring locations. Completed forms for the quarterly building inspections can be found in Attachment 1.

PROBLEMS ENCOUNTERED DURING MONITORING EVENTS

The following summarizes problems that were encountered by Brickhouse Environmental or the DSWA during any of the monitoring events that took place between the July 2018 and September 2018.

- No problems were encountered during the environmental monitoring conducted during the monitoring period.

DEVIATIONS FROM PROCEDURES OR PERMIT REQUIREMENTS

The following summarizes deviations from normal sampling procedures or requirements, as stipulated in SW-16/07 and WW-88-02 (Revision 9), during the July 2018 through September 2018 quarterly monitoring period:

- The 12th Street (SW-6) monitoring location was dry at the time of the quarterly surface water monitoring event in September 2018 and could not be sampled.
- The Northern SMB (SW-1) monitoring location was dry at the time of the quarterly surface water monitoring event in September 2018 and could not be sampled.

SUMMARY AND CONCLUSIONS

Between July 3, 2018 and September 18, 2018, Brickhouse Environmental collected samples from thirty (29) separate monitoring locations at the Site. Brickhouse Environmental and Eurofins Lancaster Laboratories Environmental performed 1,069 measurements or analyses on samples collected during that time. An additional 1,070 measurements or analyses were per performed on QA/QC samples, including duplicates. This brings the total measurements or analyses performed during the quarter to 2,139.

Based on the groundwater and surface water monitoring data generated as part of these monitoring events and previous monitoring events completed at the NSWMC-2, Brickhouse Environmental has developed the following conclusions:

1. The monthly and bi-monthly leachate quality results obtained during July through September 2018 were compared to the effluent limits provided in Sections B(1) and D(3) of the COW Wastewater Discharge Permit #W-88-02 (Rev. 9). Section B(1) provides the permissible concentrations for all permitted analytes, while section D(3) provides specific concentration limits for total arsenic and ammonia-nitrogen. The specific limits for total arsenic and ammonia-nitrogen were established under a variance, and set at 0.24 mg/L and 594 mg/L, respectively, for a flow of 500,000 gallons per day. Total arsenic was detected during all five (5) monitoring events, at concentrations well below the discharge limit of 0.24 mg/L. Ammonia-nitrogen was

detected well below the discharge limit of 594 mg/L during all five (5) monitoring events.

2. Since 2014, nearly all leachates discharged from the CI-MPS are generated at the CIL, following a significant decline in leachate shipments to the CIL from the Central and Southern Solid Waste Management Centers. Around the same time, leachate sampling protocols were modified from wet well collection, to an inline collection port. Overall leachate strength had been gradually weakening since approximately 2006, but exhibited increasing trends in some analytes following changes in 2014. During the past year, overall leachate strength appears to be stabilizing, and concentrations of total toxic organics (TTO) continue to remain relatively stable.

3. Based on the environmental monitoring data collected during the September 2018 quarterly monitoring event, surface waters and groundwater do not appear to have been impacted by landfill leachate.

4. As discussed in prior quarterly and annual environmental monitoring reports, six (6) monitoring wells have been replaced at the CIL since February 2013, due to inner casing deformations and breakages identified during well camera logging and depth sounding. The environmental monitoring program was modified in 2016, to include quarterly monitoring well sounding, to aid in the identification of any potential future inner casing failures. The quarterly depth sounding was completed during the September 2018 quarterly monitoring event. No abnormalities were discovered, and all monitoring well depths were consistent with original construction.

Brickhouse Environmental recommends no modifications to the current monitoring program. Groundwater quality and well integrity will continue to be closely monitored.

Notes:
Only depth to water measurements are collected from UC-100.
D.T.W. Depth to water measurements were collected on September 4, 2018 while the tide was coming in, just prior to peak tide.
Total well depth measurements were collected on September 4-5, 2018.
TOIC = Top of Inner Casing
S.U. = Standard Units
umhos/cm = micromhos per centimeter
mg/l = milligrams per liter
N/S = Not Sampled
NTU = Nephelometric Turbidity Unit
C = Celsius
mV = millivolts

Notes:
* The full list of analyses is included in the attached analytical report.
N.D. - Not Detected
J - estimated value ≥ the Method Detection Limit (MDL or DL) and the < Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
D1 - Indicates for dual column analyses that the result is reported from column 1.
D2 - Indicates for dual column analyses that the result is reported from column 2.

Notes:
* The full list of analyses is included in the attached analytical report.
N.D. - Not Detected
J - estimated value ≥ the Method Detection Limit (MDL or DL) and the < Limit of Quantitation (LOQ or RL)
P - Concentration difference between the primary and confirmation column >40%. The lower result is reported.
V - Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this.
D1 - Indicates for dual column analyses that the result is reported from column 1.
D2 - Indicates for dual column analyses that the result is reported from column 2.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1961557
Reported: 07/17/2018 11:41

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Sample Comments

Preservation requirements were not met. The pH preservation of all non-volatile containers was checked upon receipt at the laboratory. The container for the following analysis was not within specification and was adjusted accordingly by the laboratory: Ammonia Nitrogen, Phenols (water)

All QC is compliant unless otherwise noted. Please refer to the Quality Control Summary for overall QC performance data and associated samples.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1962029
Reported: 07/12/2018 08:31

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1966014
Reported: 07/25/2018 14:11

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

	The dissolved oxygen uptake for the unseeded blank is 0.28 mg/L.					

Sample Comments

Preservation requirements were not met. The pH preservation of all non-volatile containers was checked upon receipt at the laboratory. The container for the following analysis was not within specification and was adjusted accordingly by the laboratory: Kjeldahl Nitrogen, Ammonia Nitrogen, Total Organic Carbon, Chemical Oxygen Demand, Phenols (water)

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1966526
Reported: 08/01/2018 16:01

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1973394
Reported: 08/16/2018 16:40

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report
R	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Sample Comments

Preservation requirements were not met. The pH preservation of all non-volatile containers was checked upon receipt at the laboratory. The container for the following analysis was not within specification and was adjusted accordingly by the laboratory: Kjeldahl Nitrogen, Ammonia Nitrogen, Total Organic Carbon, Chemical Oxygen Demand, Phenols (water)

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1973879
Reported: 08/20/2018 16:07

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report
R	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1983061
Reported: 09/12/2018 13:54

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1983663
Reported: 09/10/2018 09:31

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Method Blank

Analysis Name	Result	MDL**	LOQ

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

14239	4-Methylphenol	106-44-5	N.D.	0.5	2	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
14239	a-Terpineol	98-55-5	N.D.	0.4	5	1
	The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Since the recovery is high and the target analyte(s) was not detected in the sample, the data is reported.

14239	4-Methylphenol	106-44-5	N.D.	0.5	2	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
14239	a-Terpineol	98-55-5	N.D.	0.4	5	1
	The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Since the recovery is high and the target analyte(s) was not detected in the sample, the data is reported.

14239	4-Methylphenol	106-44-5	N.D.	0.5	2	1
	3-Methylphenol and 4-methylphenol cannot be resolved under the chromatographic conditions used for sample analysis. The result reported for 4-methylphenol represents the combined total of both compounds.					
14239	a-Terpineol	98-55-5	N.D.	0.4	5	1
	The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. Since the recovery is high and the target analyte(s) was not detected in the sample, the data is reported.

REVISED

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1983692
Reported: 10/04/2018 08:41

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

9787642	84

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

REVISED

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1983692
Reported: 10/04/2018 08:41

Surrogate Quality Control (continued)

Surrogate recoveries which are outside of the QC window are confirmed unless attributed to dilution or otherwise noted on the Analysis Report.

Analysis Name: TPH-DRO water C10-C28
Batch number: 182540011A

	Orthoterphenyl
9787643	86
9787644	76
9787645	86
9787646	74
9787647	88
Blank	90
LCS	86
LCSD	86
Limits:	52-132

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

The recovery for a target analyte(s) in the Laboratory Control Spike(s) is outside the QC acceptance limits as noted on the QC Summary. The following action was taken:
The sample was re-extracted outside the method required holding time and the QC is compliant. All results are reported from the first trial.

Reporting limits were raised due to sample foaming.

A preserved vial was submitted for analysis. However, the pH at the time of analysis was 7.

Sample Comments

The VOC analysis was performed from a 4 point lab composite. The individual samples were collected on 09/04/18 at 9:08, 10:35, 13:49, and 15:00.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1983068
Reported: 10/05/2018 10:39

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1983674
Reported: 10/05/2018 13:58

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Reporting limits were raised due to sample foaming.

Sample Comments

The VOC analysis was performed from a 4 point lab composite. The individual samples were collected on 09/17/18 at 10:10, 11:57, 13:30, and 14:50.

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1987910
Reported: 10/09/2018 12:42

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Sample Comments

Preservation requirements were not met. The pH preservation of all non-volatile containers was checked upon receipt at the laboratory. The container for the following analysis was not within specification and was adjusted accordingly by the laboratory: Kjeldahl Nitrogen, Ammonia Nitrogen, Total Phosphorus as P (water), Total Organic Carbon, Soluble Phosphorus, Chemical Oxygen Demand, Hydro Phosphorus Analysis, Phenols (water)

Quality Control Summary

Client Name: Brickhouse Environmental, Inc. Group Number: 1988436
Reported: 10/09/2018 12:42

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Dear Mr. Mirzakhalili:

RE: AQM-003/00111-Renewal 2 (Revision 2)
CHERRY ISLAND LANDFILL
SEMI-ANNUAL REPORT

Enclosed are two (2) copies of the Cherry Island Landfill (CIL) semi-annual report for January 1, 2017 through June 30, 2017. This report is submitted to comply with permit AQM-003/00111-Renewal 2 (Revision 2). Please note the entire permit number does not fit on all of the forms. Therefore AQM-003/00111 R2 R2 should be taken to represent the full permit identification.

I certify the statements and information provided in this document, to the best of my knowledge, are true, accurate and complete. If you have any questions about any of the information provided please contact V. Nicole Gallagher Burkhardt at (302) 764-5385.

Yours truly,

Robin M. Roddy, P.E., BCEE
Chief Operating Officer

SEMI-ANNUAL REPORT	FOR DEPARTMENT USE, ONLY
	DATE RECEIVED:
	DATE REVIEWED:
	REVIEWD BY:

The Company shall submit to the Department and EPA Region III a report of any required monitoring and a report of any deviation(s) from permit requirements. This report shall be submitted no later than August 1 (covering the period from January 1 through June 30) and February 1 (covering the period from July 1 through December 31) of each calendar year. [Reference 7 **DE Admin. Code** 1130 (Title V) State Operating Permit Condition 3.3.2 and 7 **DE Admin. Code** 1130 Sections 6.1.3.3.1, 6.1.3.3.2, and 6.1.3.3.3.4 dated 12/11/00] Refer to the Instructions for Completing Semi-Annual Reports and Form AQM-1001DD dated July 27, 2001 and revised November 22, 2004 for questions concerning the use of this form.

Part A FACILITY INFORMATION

1. Facility Name: Cherry Island Landfill (CIL)
2. Facility Street Address: 1706 East 12th Street

3. City: Wilmington	4. State: DE	5. Zip Code: 19809
6. Permit No.: **AQM-003/00111-R2R2**	7. Facility ID No.: 1000300111 (9 digits)	8. Date Permit Issued: 12/18/2015
9. What is the Reporting Period? 01/01/2017 TO 06/30/2017		10. Date Form Prepared: 07/28/2017

11. Technical Contact: V. Nicole Gallagher Burkhardt, P.E. Title: Landfill Gas Engineer

    Phone Number: 302-764-5385 Fax Number: 302-764-5386 E-Mail Address: vngb@dswa.com

12. Has any of the information contained in Items 1 through 5 of Part A and/or Part E, Responsible Official, changed from that in the issued 7 **DE Admin. Code** 1130 Operating Permit? ☐ YES ☒ NO

    If YES, submit a request for an Administrative Permit Amendment per the requirements of 7 **DE Admin. Code** 1130 Section 7.3

Part B REPORT OF ANY REQUIRED MONITORING

1. Are you submitting an Initial Report of Monitoring? ☒ YES ☐ NO
   If YES, complete Table 1 – Report of Any Required Monitoring.
   If NO, go to Question No. 2.

2. Are you submitting a Revised Report of Monitoring? ☐ YES ☒ NO
   If YES, complete Table 1 – Report of Any Required Monitoring.
   If NO, Complete Part C; Part D, if applicable; Part E; and Part F.
   *Reference 7 **DE Admin. Code** 1130 Section 6.1.3.3.1 dated 12/11/00 and the 7 **DE Admin. Code** 1130 (Title V) State Operating Permit Condition 3.3.2.1*

Part C IDENTIFICATION OF DEVIATIONS

1. Do you have any deviations that you are reporting? ☒ YES ☐ NO
   If YES, complete Part C – Identification of Deviations – Table 2.
   If NO, complete Part D, if applicable; Part E; and Part F.
   *Reference 7 **DE Admin. Code** 1130 Section 6.1.3.3.2 and Section 6.1.3.3.3.4 dated 12/11/00 and the 7 **DE Admin. Code** 1130 (Title V) State Operating Permit Condition 3.3.2.2*

7 **DE Admin. Code** 1130 **(Title V) State Operating Permit Program** **Air Quality Management Section** **SEMI-ANNUAL REPORT**	**AQM-1001DD**

Part D ADDITIONAL INFORMATION

1. Does the Company possess any additional information that demonstrates compliance and/or non-compliance with any applicable requirement contained in the issued Title V permit? ☐ YES ☒ NO
   If YES, complete Table 3 – Additional Information
   Reference Condition No. 3.3.2.3

2. Is the Company submitting any attachments with the Semi-Annual Report? ☒ YES ☐ NO
   If YES, please identify all attachments. If additional space is needed, please use Table 4 of this Form

Part E CERTIFICATION BY RESPONSIBLE OFFICIAL

I, the undersigned, hereby certify under penalty of law that I am a Responsible Official and that I have personally examined and am familiar with the information submitted in this document and all of its attachments as to truth, accuracy, and completeness of information. I certify based on information and belief formed after reasonable inquiry the statements and information in this document are true, accurate, and complete. By signing this form, I certify that I have not changed, altered, or deleted any portions of this form.

Responsible Official Signature: Robin M. Roddy Date: 7/28/17

Responsible Official Name: Robin M. Roddy, P.E., BCEE Phone Number: 302-739-5361

Responsible Official Title: Chief Operating Officer

Part F SUBMITTAL INFORMATION

1. The Semi-Annual Report is due February 1 and August 1 of each calendar year.

2. The Semi-Annual Report shall be submitted to the following locations:

Submit One (1) Original and One (1) Copy:	**Submit One (1) Copy:**
State of Delaware – DNREC **Division of Air and Waste Management** **156 South State Street** **Dover, DE 19901** **Attn: Program Administrator**	**United States Environmental Protection Agency** **Associate Director of Enforcement (3AP12)** **1650 Arch Street** **Philadelphia, PA 19103**

*Reference 7 **DE Admin. Code** 1130 (Title V) State Operating Permit Condition 2.1.3 and 3.3.3.1 and 7 **DE Admin. Code** 1130 Sections 6.3.5.1 and 6.3.5.4 dated 12/11/00.*

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(A) The flares shall be operated with a flame present at all times and shall be operated at all times when collected landfill gas is routed to the system.	Record keeping of flare operation in accordance with Condition 3 - Table 1 (b)(1)(iii)(A).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(B) The flare flame detection device shall be in proper operation whenever the flare is in operation.	Record keeping of flame detection device operation in accordance with Condition 3 - Table 1 (b)(1)(iii)(B).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(C) The owner/operator shall adhere to the flare gas heat content specifications in 40 CFR 60, Subpart A, §60.18(c)(3)(ii) dated 7/1/05 and the flare exit velocity specifications in 40 CFR 60, Subpart A, §60.18(c)(4) dated 7/1/05.	Record keeping of flare gas heat content and exit velocity in accordance with Condition 3 - Table 1 (b)(1)(iii)(C).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(D) Landfill gas flow shall be diverted to the flare system for combustion within one (1) hour of gas compression plant shutdown during normal operating hours and within four (4) hours outside of normal operating hours. Normal operating hours shall mean Monday through Friday, 0700 hours until 1500 hours, excluding holidays and weather-related landfill closings.	Record keeping of response time to shut downs in accordance with Condition 3 - Table 1 (b)(1)(iii)(D).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(E) The flares shall be operated according to the latest startup, shutdown, and malfunction plan (SSMP) during all periods of startup, shutdown, and malfunction.	Record keeping of flare operation in accordance with Condition 3 - Table 1 (b)(1)(iii)(E).	NO

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(F) All structural and mechanical components of the flare and gas collection and treatment system shall be maintained in proper operating condition.	Record keeping of flare and gas system maintenance in accordance with Condition 3 - Table 1 (b)(1)(iii)(F).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(G) The flare shall have an NMOC destruction efficiency of at least 98%.	Record keeping of NMOC destruction efficiency in accordance with Condition 3 - Table 1 (b)(1)(iii)(G).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iv)(A) The flares shall be operated in conjunction with the gas collection system to control odors as a top priority.	Monitoring of flare operation to reduce odors in accordance with Condition 3 - Table 1 (b)(1)(iv)(A).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iv)(B) The total amount of landfill gas burned through ZULE-A and ZULE-B shall be no more than 3,780 MMscf (million standard cubic foot) per 12-month rolling period.	Record keeping of the amount of landfill gas burned through ZULE-A and ZULE-B in accordance with Condition 3 - Table 1 (b)(1)(iv)(B).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iv)(C) The maximum flow to the each flare shall be no more than 4,500 scfm (standard cubic foot per minute).	Record keeping of flare flow in accordance with Condition 3 - Table 1 (b)(1)(iv)(C).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(iv)(D) The flare shall be operated as per the manufacturer's recommendation. Flare operating parameters shall include but are not limited to flare flow rate, flame temperature and residence time.	Record keeping in accordance with Condition 3 - Table 1 (b)(1)(iv)(D).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(v) Compliance with the standards and limitations will be demonstrated by adherance to the appropriate monitoring, testing, QA/QC, and recordkeeping requirements.	Record keeping in accordance with Condition 3 - Table 1 (b)(1)(v).	NO

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
2 and 3	Condition 3 - Table 1 (b)(1)(vi)(F) The owner/operator shall monitor compliance with the opacity requirements of Condition 3-Table 1(b)(1)(i) shall be determined once per quarter using RM 22 while flares are in operation from 40 CFR 60, Appendix A, dated 7/1/05. If visual emissions are determined to be in excess of the limitation in Condition 3-Table 1(b)(1)(i), the Company shall take all means necessary to minimize emissions and to operate the flare without visible emissions.	Monitoring the opacity requirements in accordance with Condition 3 - Table 1 (b)(1)(vi)(F).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(vi)(G) While in operation, a flow meter shall be used to continuosly monitor and record the gas flow rate to the flare. The owner/operator shall follow all applicable requirements for the landfill outlined by 40 CFR Part 60.756- Monitoring of operations and 40 CFR Part 60.18(c)- General control device requirements (for flares).	Monitoring of flow rates in the flares in accordance with Condition 3 - Table 1 (b)(1)(vi)(G).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(vii)(A) The performance of the flow monitor shall be demonstrated at least once each year by passing the tests given in 40 CFR 60 Appendix B, Performance Specification 6 except for calibration drift.	Testing of flow monitor in accordance with Condition 3 - Table 1 (b)(1)(vii)(A).	NO	
2 and 3	Condition 3 - Table 1 (b)(1)(vii)(B) The owner/operator shall notify the Department at least thirty (30) days prior to any flow monitor test to give the Department the opportunity to witness the test.	Testing of flow monitor in accordance with Condition 3 - Table 1 (b)(1)(vii)(B).	NO

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
4	Condition 3 - Table 1 (c)(1)(iii)(J) Operate the collection system so that the methane concentration is less than 500 parts per million above background at the surface of the landfill. To determine if this level is exceeded, the owner or operator shall conduct surface testing around the perimeter of the collection area along a pattern that traverses the landfill at 30 meter intervals and where visual observations indicate elevated concentrations of landfill gas, such as distressed vegetation and cracks or seeps in the cover. The owner or operator may establish an alternative traversing pattern that ensures equivalent coverage. A surface monitoring design plan shall be developed that includes a topographical map with the monitoring route and the rationale for any site-specific deviations from the 30-meter intervals. Areas with steep slopes or other dangerous areas may be excluded from the surface testing.	Record keeping of surface emissions in accordance with Condition 3 - Table 1 (c)(1)(iii)(J).	NO	
4	Condition 3 - Table 1 (c)(1)(iv) All landfill gas monitoring shall be performed by trained personnel.	Record keeping of personnel training in accordance with Condition 3 - Table 1 (c)(1)(iv).	NO	
4	Condition 3 - Table 1 (c)(1)(v) Compliance with the standards and limitations will be demonstrated by adherence to the appropriate monitoring, testing, QA/QC, and recordkeeping requirements.	Record keeping and monitoring in accordance with Condition 3 - Table 1 (c)(1)(v).	NO

4	Condition 3 - Table 1 (c)(1)(vi)(A) The owner/operator shall measure gauge pressure in the gas collection header at each individual well, monthly.	Monitoring system pressure in accordance with Condition 3 - Table 1 (c)(1)(vi)(A).	NO	
4	Condition 3 - Table 1 (c)(1)(vi)(B) The owner/operator shall monitor each well for temperature and nitrogen or oxygen, monthly.	Monitoring system temperature and nitrogen or oxygen in accordance with Condition 3 - Table 1 (c)(1)(vi)(B).	NO	
4	Condition 3 - Table 1 (c)(1)(vi)(C) The owner/operator shall monitor surface concentrations of methane along the entire perimeter of the collection area and along a serpentine pattern spaced 30 meters apart (or a site-specific established spacing) for each collection area on a quarterly basis using an organic vapor analyzer, flame ionization detector, or other portable monitor meeting the specifications provided in 60.755(d).	Monitoring surface methane emissions in accordance with Condition 3 - Table 1 (c)(1)(vi)(C).	NO	
4	Condition 3 - Table 1 (c)(1)(vi)(C)(1) Monitoring shall also be performed where visual observations, such as distressed vegetation and cracks or seeps in the cover, indicate elevated concentrations of landfill gas.	Monitoring surface emissions in accordance with Condition 3 - Table 1 (c)(1)(vi)(C)(1).	NO	
4	Condition 3 - Table 1 (c)(1)(vi)(C)(2) Areas with steep or otherwise dangerous areas may be excluded from the surface testing.	Monitoring surface emissions in accordance with Condition 3 - Table 1 (c)(1)(vi)(C)(2).	NO	
4	Condition 3 - Table 1 (c)(1)(vi)(C)(3) All penetrations from the landfill.	Monitoring surface emissions in accordance with Condition 3 - Table 1 (c)(1)(vi)(C)(3).	NO

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
4	Condition 3 - Table 1 (c)(1)(vii)(G)(2) A data recorder is not required.	Monitoring of oxygen level in accordance with Condition 3 - Table 1 (c)(1)(vii)(G)(2).	NO	
4	Condition 3 - Table 1 (c)(1)(vii)(G)(3) Only two calibration gases are required, a zero and a span, and ambient air may be used as the span.	Monitoring of oxygen level in accordance with Condition 3 - Table 1 (c)(1)(vii)(G)(3).	NO	
4	Condition 3 - Table 1 (c)(1)(vii)(G)(4) A calibration error check is not required.	Monitoring of oxygen level in accordance with Condition 3 - Table 1 (c)(1)(vii)(G)(4).	NO	
4	Condition 3 - Table 1 (c)(1)(vii)(G)(5) The allowable sample bias, zero drift, and calibration drift are plus/minus 10 percent.	Monitoring of oxygen level in accordance with Condition 3 - Table 1 (c)(1)(vii)(G)(5).	NO	
4	Condition 3 - Table 1 (c)(1)(vii)(H) The NMOC emission rate shall be calculated using the appropriate equation provided in 40 CFR Part 60.754(a).	Record keeping of NMOC calculations in accordance with Condition 3 - Table 1 (c)(1)(vii)(H).	NO	
4	Condition 3 - Table 1 (c)(1)(vii)(I) Each month, the owner or operator shall sample the landfill gas using Department approved test methods to determine methane and H2S content. A dräger tube (or equivalent) test can be accepted for monthly determination of H2S in landfill gas along with a quarterly test by ASTM D5504 or EPA method 15/16. The owner or operator shall take measure to complete a quarterly test, and provide time for a repeat test within that quarter if necessary.	Monitoring methane and H2S content in accordance with Condition 3 - Table 1 (c)(1)(vii)(I).	NO

4	Condition 3 - Table 1 (c)(1)(vii)(J) Each quarter, the owner or operator shall sample the landfill gas using Department approved test methods to determine NMOC content. EPA Method 25c can be used as the Department approved test method.	Monitoring NMOC content in accordance with Condition 3 - Table 1 (c)(1)(vii)(J).	NO	
4	Condition 3 - Table 1 (c)(1)(viii) Training shall include but not be limited to such things as sampling methods, instrument calibration, instrument response time, instrument response factors, and calibration gases.	Record keeping of personnel training in accordance with Condition 3 - Table 1 (c)(1)(viii).	NO	
4	Condition 3 - Table 1 (c)(1)(ix)(A) In addition to the requirements of Conditions 3(b)(1)(ii) and 3(b)(2) of thie permit, the Company shall keep for at least 5 years up-to-date, readily accessible, on-site records of the maximum design capacity, the current amount of solid waste in-place, and the year-by-year waste acceptance rate. Off-site records may be maintained if they are retrievable within 4 hours. Either paper copy or electronic formats are acceptable.	Record keeping of landfill capacity data in accordance with Condition 3 - Table 1 (c)(1)(ix)(A).	NO	
4	Condition 3 - Table 1 (c)(1)(ix)(B) In addition to the requirements of Conditions 3(b)(1)(ii) and 3(b)(2) of thie permit, the Company shall keep readily accessible records for the life of the control equipment of the data listed in the following as measured during the initial performance test or compliance determination.	Record keeping of gas system data in accordance with Condition 3 - Table 1 (c)(1)(ix)(B).	NO

4	Condition 3 - Table 1 (c)(1)(xi)(A) For the purposes of calculating the maximum expected gas generation flow rate from the landfill to determine compliance with Condition 3– Table 1(c)(1)(iii)(B), the appropriate equation from 40 CFR Part 60.755(a)(1) shall be used. The k and Lo kinetic factors should be those published in the most recent Compilation of Air Pollutant Emission Factors (AP-42) or other site specific values demonstrated to be appropriate and approved by the Department. If k has been determined as specified in 60.754(a)(4), the value of k determined from the test shall be used. A value of no more than 15 years shall be used for the intended use period of the gas mover equipment. The active life of the landfill is the age of the landfill plus the estimated number of years until closure.	Record keeping of gas flow rate calculation in accordance with Condition 3 - Table 1 (c)(1)(xi)(A).	NO	
4	Condition 3 - Table 1 (c)(1)(xi)(B) If a positive pressure exists, action shall be initiated to correct the exceedance within 5 calendar days, except for the three conditions allowed under Condition 3–Table 1(c)(1)(iii)(I).	Record keeping of positive pressure corrective action in accordance with Condition 3 - Table 1 (c)(1)(xi)(B).	NO

TABLE 1 - Report of Any Required Monitoring

COLUMN A	COLUMN B	COLUMN C	COLUMN D	
Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
4	Condition 3 - Table 1 (c)(1)(xi)(C) If negative pressure cannot be achieved without excess air infiltration within 15 calendar days of the first measurement, the gas collection system shall be expanded to correct the exceedance within 120 days of the initial measurement of positive pressure. Any attempted corrective measurement shall not cause exceedances of other operational or performance standards.	Record keeping of gas system expansion in accordance with Condition 3 - Table 1 (c)(1)(xi)(C).	NO	
4	Condition 3 - Table 1 (c)(1)(xi)(D) Installation of additional wells is not required during the first 180 days after gas collection system start-up.	Record keeping of new wells in accordance with Condition 3 - Table 1 (c)(1)(xi)(D).	NO	
4	Condition 3 - Table 1 (c)(1)(xi)(E) If a well exceeds one of the operating parameters of Condition 3–Table 1(c)(1)(iii)(I), action shall be initiated to correct the exceedance within 5 calendar days. If correction of the exceedance cannot be achieved within 15 calendar days of the first measurement, the gas collection system shall be expanded to correct the exceedance within 120 days of the initial exceedance. Any attempted corrective measurement shall not cause exceedances of other operational or performance standards.	Record keeping of corrective action in accordance with Condition 3 - Table 1 (c)(1)(xi)(E).	NO

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
4	Condition 3 - Table 1 (c)(1)(xi)(F) Any reading of 500 ppm or more above background at any location shall be recorded as a monitored exceedance and the following actions shall be taken. As long as the following specified actions are taken, the exceedance is not a violation of the operational requirements.	Record keeping of surface monitoring exceedances in accordance with Condition 3 Table 1 (c)(1)(xi)(F).	NO	
4	Condition 3 - Table 1 (c)(1)(xi)(F)(1) The location of each monitored exceedance shall be marked and the location recorded.	Record keeping of exceedance location in accordance with Condition 3 - Table 1 (c)(1)(xi)(F)(1).	NO	
4	Condition 3 - Table 1 (c)(1)(xi)(F)(2) Cover maintenance or adjustments to the vacuum of the adjacent wells to increase the gas collection in the vicinity of each exceedance shall be made and the location shall be re-monitored within 10 calendar days of detecting the exceedance.	Record keeping of corrective actions in accordance with Condition 3 - Table 1 (c)(1)(xi)(F)(2).	NO	
4	Condition 3 - Table 1 (c)(1)(xi)(F)(3) If the re-monitoring of the location shows a second exceedance, additional corrective action shall be taken and the location shall be monitored again within 10 days of the second exceedance. If the re-monitoring shows a third exceedance for the same location, the action specified in Condition 3 – Table 1(c)(1)(xi)(F)(5) shall be taken, and no further monitoring of that location is required until the action specified in Condition 3 – Table 1(c)(1)(xi)(F)(5) has been taken.	Record keeping of remonitoring results in accordance with Condition 3 - Table 1 (c)(1)(xi)(F)(3).	NO

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
4	Condition 3 - Table 1 (c)(1)(xi)(F)(4) Any location that initially showed an exceedance but has a methane concentration less than 500 ppm methane above background at the 10-day re-monitoring shall be re-monitored 1 month from the initial exceedance. If the 1-month re-monitoring shows a concentration less than 500 ppm above background, no further monitoring of that location is required until the next quarterly monitoring period. If the 1-month re-monitoring shows an exceedance, the actions specified in Condition 3 – Table 1(c)(1)(xi)(F)(3) or (5) shall be taken.	Record keeping of remonitoring in accordance with Condition 3 - Table 1 (c)(1)(xi)(F)(4).	NO	
4	Condition 3 - Table 1 (c)(1)(xi)(F)(5) For any location where monitored methane concentration equals or exceeds 500 ppm above background three times within a quarterly period, a new well or other collection device shall be installed within 120 calendar days of the initial exceedance. An alternative remedy to the exceedance, such as upgrading the blower, header pipes or control device, and a corresponding timeline for installation may be submitted to the Department for approval.	Record keeping of remonitoring results in accordance with Condition 3 - Table 1 (c)(1)(xi)(F)(5).	NO	
4	Condition 3 - Table 1 (c)(1)(xi)(G) Compliance with all standards and limitations of Condition 3 – Table 1(c)(1)(iii) and (iv) shall be based upon record keeping.	Record keeping of compliance in accordance with Condition 3 - Table 1 (c)(1)(xi)(G).	NO

TABLE 1 - Report of Any Required Monitoring

COLUMN A	COLUMN B	COLUMN C	COLUMN D	
Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
4	Condition 3 - Table 1 (c)(3)(iii)(A)(3) The calculated NMOC gas produced by the landfill shall be less than 50 megagrams per year on three successive test dates. The test dates shall be no less than 90 days apart, and no more than 180 days apart.	Record keeping of NMOC gas produced in accordance with Condition 3 - Table 1 (c)(3)(iii)(A)(3).	NO	
4	Condition 3 - Table 1 (c)(3)(iii)(B) If a closure report has been submitted to the Department, no additional wastes may be placed into the landfill without filing a notification of modification as described under 40 CFR Part 60.7(a)(4) provided that none of the conditions of this permit are violated.	Record keeping of waste acceptance in accordance with Condition 3 - Table 1 (c)(3)(iii)(B).	NO	
4	Condition 3 - Table 1 (c)(3)(iii)(C) Any closed landfill that has no monitored exceedances in three consecutive quarterly monitoring periods may skip to annual monitoring. Any methane readings of 500 parts per million or more above background detected during the annual monitoring returns the frequency for that landfill to quarterly monitoring.	Record keeping of monitored exceedances in accordance with Condition 3 - Table 1 (c)(3)(iii)(C).	NO	
4	Condition 3 - Table 1 (c)(3)(v) Compliance with the standards and limitations will be demonstrated by adherence to the appropriate monitoring, testing, QA/QC, and recordkeeping requirements.	Record keeping of compliance in accordance with Condition 3 -Table 1 (c)(3)(v).	NO	
4	Condition 3 - Table 1 (c)(3)(vi) The company shall monitor the operational standards of Condition 3–Table 1(c)(3)(iii).	Monitoring of operational standards in accordance with Condition 3 - Table 1 (c)(3)(vi).	NO

6	Condition 3 - Table 1 (e)(1)(iii)(E) Despite Condition 3–Table 1(e)(1)(iii)(D), an emergency generator may be tested on any day that such testing is required to meet National Fire Protection Association (NFPA) standards.	Record keeping of hours of operation in accordance with Condition 3 - Table 1 (e)(1)(iii)(E).	NO	
6	Condition 3 - Table 1 (e)(1)(iii)(F) The emergency generator shall only combust diesel fuel or biodiesel blend having a sulfur content equal to or less than 0.05% by weight.	Record keeping of generator fuel in accordance with Condition 3 - Table 1 (e)(1)(iii)(F).	NO	
6	Condition 3 - Table 1 (e)(1)(iii)(G) The emergency generator shall be equipped with a properly functioning non-resettable hour metering device.	Record keeping of generator equipment in accordance with Condition 3 - Table 1 (e)(1)(iii)(G).	NO	
6	Condition 3 - Table 1 (e)(1)(iii)(H) The emergency generator shall not be operated in conjunction with a voluntary demand reduction program or any other interruptible power supply arrangement with a utility, other market participant, or system operator (e.g. Delmarva Power, Delaware Electric Cooperative, PJM, etc.).	Record keeping of reasons for operation in accordance with Condition 3 - Table 1 (e)(1)(iii)(H).	NO	
6	Condition 3 - Table 1 (e)(1)(iii)(I) The emergency generator shall not be transferred off-site without first notifying the Department. Whoever becomes the new owner or operator of this generator within the State of Delaware shall apply for a construction permit.	Record keeping of generator location in accordance with Condition 3 - Table 1 (e)(1)(iii)(I).	NO

COLUMN A	COLUMN B	COLUMN C	COLUMN D	
Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
Facility Wide	Condition 3 - Table 1 (f)(1)(ix) That required by Conditions 3(b)(1)(ii) and 3(b)(2) and Condition 3-Table 1(f)(1)(vi) of this permit.	Record keeping in accordance with Condition 3 - Table 1 (f)(1)(ix).	NO	
Facility Wide	Condition 3 - Table 1 (f)(1)(x) In addition to that required by Conditions 2(a), 2(b)(9), 2(f)(3), 3(b)(1)(ii), and 3(c)(2) of this permit, the owner/operator shall calculate the rolling 12-month emissions from passive flares based on actual hours of operations and best engineering assumptions. The owner/operator shall include the passive flare emissions to yearly emissions inventory report.	Reporting of emissions in accordance with Condition 3 - Table 1 (f)(1)(x).	YES	April 27, 2017
Facility Wide	Condition 3 - Table 1 (f)(1)(xi)(A) Compliance with the emission limitations identified by the unit-specific emissions shall be demonstrated each month based on the amount of gas combusted, actual NMOC, actual H2S concentrations, actual methane content in landfill gas, approved emission factors and good engineering assumptions.	Record keeping of compliance with emission limitations in accordance with Condition 3 - Table 1 (f)(1)(xi)(A).	NO	
Facility Wide	Condition 3 - Table 1 (f)(1)(xi)(B) Any noncompliance with the restrictions of Condition 3–Table 1(f)(xi)(A) shall be evaluated in accordance with the requirements of 7 DE Admin Code 1125, Requirements for Preconstruction Review. Any emission exceedances which trigger the requirements of 7 DE Admin Code 1125 shall subject the facility to full review under this regulation as though construction had not yet commenced at the facility.	Record keeping of noncompliance in accordance with Condition 3 - Table 1 (f)(1)(xi)(B).	NO

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
Facility Wide	Condition 3 - Table 1 (f)(2)(i) Odor: The owner/operator shall not cause or allow the emission of odorous air contaminants such as to cause a condition of air pollution.	Record keeping of emissions of odorous air contaminants in accordance with Condition 3 Table 1 (f)(2)(i).	NO	
Facility Wide	Condition 3 - Table 1 (f)(2)(iv) Compliance with the standards and limitations will be demonstrated by adherence to the appropriate monitoring, testing, QA/QC, and recordkeeping requirements.	Record keeping of compliance in accordance with Condition 3 - Table 1 (f)(2)(iv).	NO	
Facility Wide	Condition 3 - Table 1 (f)(2)(v)(A) Conduct daily odor survey at the perimeter of the facility on days the facility is operational. The daily surveys shall be conducted 6 days a week (Monday through Saturday). The owner or operator shall resume off day monitoring if there are any verified odor complaints on any off day in any subsequent quarter. If a landfill gas odor sufficient to cause or create a condition of air pollution is detected, the owner/operator shall take immediate action to correct landfill gas odor problem. The following information shall be recorded and maintained in written or electronic log. Any written log shall be initialed: Start and end time of survey, presence or absence of odor, wind direction, ambient air temperature, and location monitored. In the event when odor is detected along the perimeter exterior of the landfill, the odor survey log shall include the following additional information: Humidity content of ambient air, average wind speed, actions taken in response to odor found.	Monitoring of odors in accordance with Condition 3 - Table 1 (f)(2)(v)(A).	NO

Emission Unit/Point	**Applicable Requirement Emission Limitation, Standard, Work Practice Standard or Other Requirement for which monitoring is used to assure compliance**	**Monitoring**	**Separate Monitoring Report Required?**	**If Yes, Date of Separate Report Submittal or Attachment ID**
Facility Wide	Condition 3 - Table 1 (f)(2)(x)(A) In addition to that required by Conditions 2(a), 2(b)(9), 2(f)(3), 3(b)(1)(ii), and 3(c)(2) of this permit, the owner/operator shall comply with the following: Notify the Department immediately if daily or other odor surveys detect odors beyond the landfill perimeter. The owner/operator shall submit an odor survey sumary log by the end of each calendar month for the previous month. The odor survey summary log shall include all information outlined by Condition 3-Table 1(f)(2)(v)(A).	Reporting of odors in accordance with Condition 3 - Table 1 (f)(2)(x)(A).	YES	Submitted monthly throughout the year
Facility Wide	Condition 3 - Table 1 (f)(2)(x)(B) In addition to that required by Conditions 2(a), 2(b)(9), 2(f)(3), 3(b)(1)(ii), and 3(c)(2) of this permit, the owner/operator shall comly with the following: Research and explore various H2S generation reduction strategies and control options and implement these strategies as necessary so that the H2S concentration in the landfill gas remains consistently low and meets the Ambient Air Quality Standard (AAQS) outlined by 7 DE Admin Code 1103, Section 9 for this pollutant. The facility must submit an annual report to the Department by the end of March of each calendar year for the previous year summarizing its findings including which strategies and control options have been implemented for H2S generation reduction.	Compliance with researching H2S reduction methods in accordance with Condition 3 - Table 1 (f)(2)(x)(B).	YES	March 30, 2017

Facility Wide	Condition 3 - Table 1 (f)(3)(xi)(A) In addition to that required by Condition 3(c)(3)of this permit, compliance wit the operational standards shall be demonstrated by the following: Compliance with the Condition 3–Table 1(f)(3)(iii)(A) shall be demonstrated by adherence to good engineering operations and work practices, and based upon record keeping for the proper operation and maintenance of the equipment covered by this permit.	Record keeping of compliance with operational standards in accordance with Condition 3 - Table 1 (f)(3)(xi)(A).	NO	
Facility Wide	Condition 3 - Table 1 (f)(3)(xi)(B) In addition to that required by Condition 3(c)(3)of this permit, compliance wit the operational standards shall be demonstrated by the following: Compliance with the Condition 3 – Table 1(f)(3)(iii)(B), (C), and (D) shall be demonstrated by record keeping.	Record keeping of compliance with operational standards in accordance with Condition 3 - Table 1 (f)(3)(xi)(B).	NO	

Regulation No. 30 (Title V) State Operating Permit Program Air Quality Management Section Semi-Annual Report (continued)	AQM-1001DD

Facility Name: CIL **Operating Permit Number:** AQM-003/00111 - R 2 R 2 **Reporting Period:** 01/01/2017 **TO** 06/30/2017

Table 2 - Identification of Deviations

1. Permit Term or Condition for which there is a deviation	2. Emission Unit Identification	3. Deviation Description
Condition 3 - Table 1 (c)(1)(iii)(H)(1)	4	Positive pressure detected at wellhead.

4. Deviation Duration		
4.1 Date (mm/dd/yyyy) Beginning: 00/00/0000 Ending: 00/00/0000	4.2 Time (hr:min) Start: 00:00 End: 00:00	4.3 Duration (hr:min):

5. Probable Cause of Deviation	6. Corrective Action
See Attachment B for additional information.	

7. Deviation Reporting

7.1 Did your Permit require that this Deviation be reported previously? ☐ YES ☑ NO

7.2 Was this Deviation reported previously? ☐ YES ☑ NO ☐ NOT APPLICABLE

7.2(a) If YES, provide the date the written report was submitted: 00/00/0000

Regulation No. 30 (Title V) State Operating Permit Program Air Quality Management Section Semi-Annual Report (continued)	AQM-1001DD

Facility Name: CIL **Operating Permit Number:** AQM-003/00111 - R 2 R 2 **Reporting Period:** 01/01/2017 **TO** 06/30/2017

Table 2 - Identification of Deviations

1. Permit Term or Condition for which there is a deviation	2. Emission Unit Identification	3. Deviation Description
Condition 3 - Table 1 (c)(1)(iii)(H)(2)	4	Corrective action for pressure exceedance at well CILFG062R was not recorded on or before the 5th day and negative pressure was not achieved on or before the 15th day.

4. Deviation Duration		
4.1 Date (mm/dd/yyyy) Beginning: 05/01/2017 Ending: 05/24/2017	4.2 Time (hr:min) Start: 00:00 End: 00:00	4.3 Duration (hr:min): 24:00

5. Probable Cause of Deviation	6. Corrective Action
Technician error. The well was originally read on 5/01/2017 showing a pressure exceedance, but the reading was miscategorized as a well in decommissioning and the 5-day and 15-day requirements were missed. The well was read again on 5/24/2017 and passed.	The well was read and exceedance corrected on the 23rd day as soon as the error was noticed.

7. Deviation Reporting

Dear Mr. Mirzakhalili:

RE: **AQM-003/00111-RENEWAL 3**
CHERRY ISLAND LANDFILL
2017 ANNUAL REPORT

In compliance with our Title V Permit: AQM-003/00111-Renewal 2(Revision 2) (enforceable January 1, 2017 through July 31, 2017) and AQM-003/00111-Renewal 3 (enforceable August 1, 2017 through December 31, 2017) enclosed are one (1) original and one (1) copy of the Cherry Island Landfill annual certification report for the period January 1, 2017 through December 31, 2017. This document also contains the semi-annual report for July 1, 2017 through December 31, 2017. Please note, the entire permit number does not fit on all of the forms. Therefore AQM-003/00111 should be taken to represent the full permit identification.

I certify, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate and complete. If you have any questions about any of the information provided please contact Ms. V. Nicole Gallagher Burkhardt at (302) 764-5385.

Yours truly,

Robin M. Roddy, P.E., BCEE
Chief Operating Officer

Regulation No. 30 Title V State Operating Program Air Quality Management Section	AQM-1001BB revised

COMPLIANCE CERTIFICATION

Form B

Updated July 1, 2008

For Permits Issued After May 12, 2008 Using New Boilerplate Language

FOR DEPARTMENT USE, ONLY
DATE RECEIVED:
DATE REVIEWED:
REVIEWED BY:

An application for a permit, permit modification, or permit renewal must contain a certification of compliance signed by a *Responsible Official*. This form must be submitted with each application in addition to satisfying the compliance certification requirements of Regulation No. 30 (Title V) State Operating Permits. The Annual Compliance Certification report is due February 1 of each calendar year and covers the reporting period of January 1 through December 31 of the previous calendar year. This form also fulfills the requirement to certify compliance with applicable requirements at the time of the initial application request for a permit and for a significant or minor permit revision request. This form can also be used to certify compliance with the applicable requirements and terms and conditions of the operating permit as part of request for permit renewal.

This form has been designed for permits issued after May 12, 2008 that have new boilerplate language. Note: A limited number of permits issued soon after May 12, 2008 were in-process and contain the older language. If you are uncertain of which Compliance Certification form to use, ask your permitting engineer or scientist.

Part A: FACILITY INFORMATION

1. Facility Name: Cherry Island Landfill
2. Facility Street Address: 1706 E. 12th Street

3. City: Wilmington	4. State: DE	5. Zip Code: 19809

6. Are you submitting: *(check only one box)*

   A. Compliance Certification as part of an Initial Permit Application: ☐
   B. Compliance Certification as part of an Application for Permit Renewal: ☐
   C. Annual Compliance Certification: ☒
   D. Compliance Certification as part of an Application for a Minor or Significant Permit Revision: ☐

7. Permit No.: AQM-003/00111	8. Facility ID No.: 1000300111 (10 digits)	9. Date Permit Issued: 08/01/2017

10. What is the reporting period?

    A. Annual Compliance Certification: 01/01/2017 TO 12/31/2017
    B. Semi-Annual Report:
       Submitted using form AQM-1001BB: YES
       If YES, Indicate the reporting period for the Semi-Annual Report:
       07/01/2017 TO 12/31/2017

11. Date Form Prepared: 1/29/2018

12. Technical Contact: V. Nicole Gallagher Burkhardt Title: Landfill Gas Engineer
    Phone No.: (302) 764-5385 ext. Fax No.: (302) 764-5386 E-Mail Address: vngb@dswa.com

Part B: COMPLIANCE STATUS

1. Complete Table 1 – Compliance Status: Indicate the compliance status with respect to the terms and conditions of the Regulation No. 30 (Title V) State Operating Permit.

2. Complete Table 2 – Compliance Status – General Conditions: Indicate the Compliance Status with the General Conditions of the Regulation No. 30 (Title V) State Operating Permit.

3. Has any of the information contained in Items 1 through 5 of Part A and/or Part D, Responsible Official, information changed from that contained in the issued Regulation No. 30 (Title V) State Operating Permit?
   NO
   If YES, submit a request for an administrative permit amendment per the requirements of Regulation No. 30 Section 7(c).

4. Semi-Annual Report: Completion of this section of the form fulfills the obligation of the facility to submit a Semi-Annual Report.

   Complete Table 3, Report of Any Required Monitoring, and complete Table 4, Report of Deviations

   Is the Responsible Official reporting any deviations for the reporting period? YES

Regulation No. 30 (Title V) State Operating Permit Program Air Quality Management Section COMPLIANCE CERTIFICATION	AQM-1001BB revised

Part C: ADDITIONAL INFORMATION

1. Does the Company possess any additional information that demonstrates noncompliance with any term or condition of the Regulation No. 30 (Title V) State Operating Permit? NO

   If YES, complete Table 5 – Additional Information

2. Is the Company submitting any attachments with the annual certification report? YES

   If YES, complete Table 6 – Additional Information

Part D: CERTIFICATION BY RESPONSIBLE OFFICIAL

I, the undersigned, hereby certify under penalty of law that I am a Responsible Official and that I have personally examined and am familiar with the information submitted in the document and all of its attachments as to the truth, accuracy, and completeness of this information. I certify based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

I am submitting the Semi-Annual Report with the Annual Compliance Certification: YES
(Note: the Semi-Annual Report is due February 1st for the reporting period July 1st through December 31st and August 1st for the reporting period January 1st through June 30th of each calendar year.)

By signing this form, I certify that I have not changed, altered, or deleted any portions of this form.

Responsible Official Signature: _____

Responsible Official Name: Robin M. Roddy, P.E., BCEE
Responsible Official Title: Chief Opertaing Officer
Phone Number: (302) 739-5361 ext.

Part E: SUBMITTAL INFORMATION

1. The Annual Compliance Certification report is due February 1 of each calendar year.

2. The Annual Compliance Certification should be submitted to the following locations:

Original and one (1) copy:	One (1) copy:
State of Delaware – DNREC Division of Air Quality 655 S Bay Road, Suite 5N Dover, DE 19901 Attention: Director	United States Environmental Protection Agency Associate Director of Enforcement (3AP12) 1650 Arch Street Philadelphia, PA 19103

Annual and Semi-Annual Report Tables

The following Annual and Semi-Annual Report Tables include all Table 1 conditions from Permit: AQM-003/00111-Renewal 2(Revision 2) which was in effect for the reporting period of January 1, 2017 through July 31, 2017. Permit: AQM-003/00111-Renewal 3 was in effect for the reporting period of August 1, 2017 through December 31, 2017.

Most conditions were unchanged in the new Permit. Therefore, unless otherwise marked, these tables demonstrate compliance for the entire annual reporting period of January 1, 2017 through December 31, 2017 or semi-annual reporting period of July 1, 2017 through December 31, 2017 (as applicable) for all conditions listed under both revisions of the Permit. It should be noted that the condition reference numbers and Emission Unit numbers relate to Permit: AQM-003/00111-Renewal 2(Revision 2) which may vary from the condition reference numbers and Emission Unit numbers for Permit: AQM-003/00111-Renewal 3.

Any condition listed in Table 1 or Table 3 which has an asterisk and a shaded background has been changed or removed in the new Permit: AQM-003/00111-Renewal 3. Therefore, compliance with these marked conditions is for the annual reporting period of January 1, 2017 through July 31, 2017 or semi-annual reporting period of July 1, 2017 through July 31, 2017 (as applicable).

Attachments G and H of this report include a supplement to the Annual and Semi-Annual Report Tables (respectively). The conditions listed in Attachments G and H are either newly incorporated or revised in Permit: AQM-003/00111-Renewal 3. Compliance with these conditions is for the reporting period of August 1, 2017 through December 31, 2017.

The above plan was discussed with and approved by DNREC on a phone call held on January 11, 2018.

1	Condition 3 - Table 1 (a)(1)(x)(B) The Company shall calculate/estimate the emissions from all passive flares used at the site based on actual hours of operation and include this information in the annual emissions inventory report.	Reporting of passive flare emissions in accordance with Condition 3 - Table 1 (a)(1)(x)(B).	Continuous
1	Condition 3 - Table 1 (a)(1)(xi) In addition to that required by Condition 3(c)(3) of this permit, compliance shall be based on monitoring, records keeping and reporting requirements of this section.	Record keeping in accordance with Condition 3 - Table 1 (a)(1)(xi).	Continuous
2 and 3	Condition 3 - Table 1 (b)(1)(i) The flare shall be operated with no visible emissions as determined by Reference Method 22, except for periods not to exceed a total of five (5) minutes during any two (2) consecutive hours.	Monitoring of flare visible emissions in accordance with Condition 3 - Table 1 (b)(1)(i).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(A)(1) NOx: A rate of 0.025 pound per million BTU for each Low-NOx enclosed flare.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(A)(1).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(A)(2) NOx: 11.95 tons per 12-month rolling period for each Low-NOx enclosed Flare, and a total of 23.9 tons per 12-month rolling period for both flares combined.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(A)(2).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(B)(1) CO: A rate of 0.06 pound per million BTU for each flare.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(B)(1).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(B)(2) CO: 57.4 tons per 12-month rolling period for both flares combined.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(B)(2).	Continuous

Facility Name: CIL Operating Permit Number: AQM-003/00111-Renewal 2 (Revision 2) Reporting Period: 01/01/2017 TO 12/31/2017

Table 1 - Compliance Status

COLUMN A Emission Unit Identification	COLUMN B Identification of Each Permit Term or Condition that is the basis of this Certification	COLUMN C Methods Used to Determine Compliance	COLUMN D Compliance Status During Reporting Period Continuous or Intermittent
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(C)(1) PM: A rate of 2.3 pounds per hour for each flare.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(C)(1).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(C)(2) PM: 16 tons per 12-month rolling period for both flares combined.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(C)(2).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(D) NMOC: 0.61 tons per 12-month rolling period for both flares combined.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(D).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(E)(1) SOx: A rate of 19.7 pounds per hour for each flare.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(E)(1).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(E)(2) SOx: 77 tons per 12-month rolling period for both flares combined.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(E)(2).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(F)(1) HCl: A rate of 0.28 pounds per hour for each flare.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(F)(1).	Continuous
2 and 3	*Condition 3 - Table 1 (b)(1)(ii)(F)(2) HCl: 1.11 tons per 12-month rolling period for both flares combined.	Monitoring of flare emissions in accordance with Condition 3 - Table 1 (b)(1)(ii)(F)(2).	Continuous
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(A) The flares shall be operated with a flame present at all times and shall be operated at all times when collected landfill gas is routed to the system.	Record keeping of flare operation in accordance with Condition 3 - Table 1 (b)(1)(iii)(A).	Continuous
2 and 3	Condition 3 - Table 1 (b)(1)(iii)(B) The flare flame detection device shall be in proper operation whenever the flare is in operation.	Record keeping of flame detection device operation in accordance with Condition 3 - Table 1 (b)(1)(iii)(B).	Continuous
